The World Factbook 2002

In general, information available as of 1 January 2002 was used in the preparation of this edition.

The World Factbook is prepared by the Central Intelligence Agency for the use of US Government officials, and the style, format, coverage, and content are designed to meet their specific requirements. Information is provided by Antarctic Information Program (National Science Foundation), Bureau of the Census (Department of Commerce), Bureau of Labor Statistics (Department of Labor), Central Intelligence Agency, Council of Managers of National Antarctic Programs, Defense Intelligence Agency (Department of Defense), Department of State, Fish and Wildlife Service (Department of the Interior), Maritime Administration (Department of Transportation), National Imagery and Mapping Agency (Department of Defense), Naval Facilities Engineering Command (Department of Defense), Office of Insular Affairs (Department of the Interior), Office of Naval Intelligence (Department of Defense), US Board on Geographic Names (Department of the Interior), US Transportation Command (Department of Defense), and other public and private sources.

The *Factbook* is in the public domain. Accordingly, it may be copied freely without permission of the Central Intelligence Agency (CIA). The official seal of the CIA, however, may **NOT** be copied without permission as required by the CIA Act of 1949 (50 U.S.C. section 403m). Misuse of the official seal of the CIA could result in civil and criminal penalties.

A Brief History of Basic Intelligence and The World Factbook

The Intelligence Cycle is the process by which information is acquired, converted into intelligence, and made available to policymakers. Information is raw data from any source, data that may be fragmentary, contradictory, unreliable, ambiguous, deceptive, or wrong. Intelligence is information that has been collected, integrated, evaluated, analyzed, and interpreted. Finished Intelligence is the final product of the Intelligence Cycle ready to be delivered to the policymaker.

The three types of finished intelligence are: basic, current, and estimative. Basic intelligence provides the fundamental and factual reference material on a country or issue. Current intelligence reports on new developments. Estimative intelligence judges probable outcomes. The three are mutually supportive: basic intelligence is the foundation on which the other two are constructed; current intelligence continually updates the inventory of knowledge; and estimative intelligence revises overall interpretations of country and issue prospects for guidance of basic and current intelligence. *The World Factbook*, *The President's Daily Brief*, and the *National Intelligence Estimates* are examples of the three types of finished intelligence.

The United States has carried on foreign intelligence activities since the days of George Washington but only since World War II have they been coordinated on a government-wide basis. Three programs have highlighted the development of coordinated basic intelligence since that time: (1) the *Joint Army Navy Intelligence Studies* (JANIS), (2) the *National Intelligence Survey* (NIS), and (3) *The World Factbook*.

During World War II, intelligence consumers realized that the production of basic intelligence by different components of the US Government resulted in a great duplication of effort and conflicting information. The Japanese attack on Pearl Harbor in 1941 brought home to leaders in Congress and the executive branch the need for integrating departmental reports to national policymakers. Detailed and coordinated information was needed not only on such major powers as Germany and Japan, but also on places of little previous interest. In the Pacific Theater, for example, the Navy and Marines had to launch amphibious operations against many islands about which information was unconfirmed or nonexistent. Intelligence authorities resolved that the United States should never again be caught unprepared.

In 1943, Gen. George B. Strong (G-2), Adm. H. C. Train (Office of Naval Intelligence - ONI), and Gen. William J. Donovan (Director of the Office of Strategic Services - OSS) decided that a joint effort should be initiated. A steering committee was appointed on 27 April 1943 that recommended the formation of a Joint Intelligence Study Publishing Board to assemble, edit, coordinate, and publish

the *Joint Army Navy Intelligence Studies* (JANIS). JANIS was the first interdepartmental basic intelligence program to fulfill the needs of the US Government for an authoritative and coordinated appraisal of strategic basic intelligence. Between April 1943 and July 1947, the board published 34 JANIS studies. JANIS performed well in the war effort, and numerous letters of commendation were received, including a statement from Adm. Forrest Sherman, Chief of Staff, Pacific Ocean Areas, which said, "JANIS has become the indispensable reference work for the shore-based planners."

The need for more comprehensive basic intelligence in the postwar world was well expressed in 1946 by George S. Pettee, a noted author on national security. He wrote in *The Future of American Secret Intelligence* (Infantry Journal Press, 1946, page 46) that world leadership in peace requires even more elaborate intelligence than in war. "The conduct of peace involves all countries, all human activities - not just the enemy and his war production."

The Central Intelligence Agency was established on 26 July 1947 and officially began operating on 18 September 1947. Effective 1 October 1947, the Director of Central Intelligence assumed operational responsibility for JANIS. On 13 January 1948, the National Security Council issued Intelligence Directive (NSCID) No. 3, which authorized the *National Intelligence Survey* (NIS) program as a peacetime replacement for the wartime JANIS program. Before adequate NIS country sections could be produced, government agencies had to develop more comprehensive gazetteers and better maps. The US Board on Geographic Names (BGN) compiled the names; the Department of the Interior produced the gazetteers; and CIA produced the maps.

The Hoover Commission's Clark Committee, set up in 1954 to study the structure and administration of the CIA, reported to Congress in 1955 that: "The National Intelligence Survey is an invaluable publication which provides the essential elements of basic intelligence on all areas of the world. There will always be a continuing requirement for keeping the Survey up-to-date." The *Factbook* was created as an annual summary and update to the encyclopedic NIS studies. The first classified *Factbook* was published in August 1962, and the first unclassified version was published in June 1971. The NIS program was terminated in 1973 except for the *Factbook*, map, and gazetteer components. The 1975 *Factbook* was the first to be made available to the public with sales through the US Government Printing Office (GPO). The year 2002 marks the 55th anniversary of the establishment of the Central Intelligence Agency and the 59th year of continuous basic intelligence support to the US Government by *The World Factbook* and its two predecessor programs.

Notes and Definitions

In addition to the updating of information, the following changes have been made in this edition of *The World Factbook*. There is a new country profile on East Timor and there is a new entry on **Distribution of family income - Gini index**. Revision of some individual country maps, first introduced in the 2001 edition, is continued in this edition. The revised maps include elevation extremes and a partial geographic grid.

Abbreviations: This information is included in **Appendix A: Abbreviations**, which includes all abbreviations and acronyms used in the *Factbook*, with their expansions.

Acronyms: An acronym is an abbreviation coined from the initial letter of each successive word in a term or phrase. In general, an acronym made up solely from the first letter of the major words in the expanded form is rendered in all capital letters (NATO from North Atlantic Treaty Organization; an exception would be ASEAN for Association of Southeast Asian Nations). In general, an acronym made up of more than the first letter of the major words in the expanded form is rendered with only an initial capital letter (Comsat from Communications Satellite Corporation; an exception would be NAM from Nonaligned Movement). Hybrid forms are sometimes used to distinguish between initially identical terms (WTO: WTO for World Trade Organization and WTOO for World Tourism Organization.)

Administrative divisions: This entry generally gives the numbers, designatory terms, and first-order administrative divisions as approved by the US Board on Geographic Names (BGN). Changes that have been reported but not yet acted on by BGN are noted.

Age structure: This entry provides the distribution of the population according to age. Information is included by sex and age group (0-14 years, 15-64 years, 65 years and over). The age structure of a population affects a nation's key socioeconomic issues. Countries with young populations (high percentage under age 15) need to invest more in schools, while countries with older populations (high percentage ages 65 and over) need to invest more in the health sector. The age structure can also be used to help predict potential political issues. For example, the rapid growth of a young adult population unable to find employment can lead to unrest.

Agriculture - products: This entry is a rank ordering of major crops and products starting with the most important.

Airports: This entry gives the total number of airports. The runway(s) may be paved (concrete or asphalt surfaces) or unpaved (grass, dirt, sand, or gravel surfaces), but must be usable. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with paved runways: This entry gives the total number of airports with paved runways (concrete or asphalt surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control.

Airports - with unpaved runways: This entry gives the total number of airports with unpaved runways (grass, dirt, sand, or gravel surfaces) by length. For airports with more than one runway, only the longest runway is included according to the

Notes and Definitions (continued)

following five groups - (1) over 3,047 m, (2) 2,438 to 3,047 m, (3) 1,524 to 2,437 m, (4) 914 to 1,523 m, and (5) under 914 m. Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control.

Appendixes: This section includes *Factbook*-related material by topic.

Area: This entry includes three subfields. *Total area* is the sum of all land and water areas delimited by international boundaries and/or coastlines. *Land area* is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). *Water area* is the sum of all water surfaces delimited by international boundaries and/or coastlines, including inland water bodies (lakes, reservoirs, rivers).

Area - comparative: This entry provides an area comparison based on total area equivalents. Most entities are compared with the entire US or one of the 50 states based on area measurements (1990 revised) provided by the US Bureau of the Census. The smaller entities are compared with Washington, DC (178 sq km, 69 sq mi) or The Mall in Washington, DC (0.59 sq km, 0.23 sq mi, 146 acres).

Background: This entry usually highlights major historic events and current issues and may include a statement about one or two key future trends.

Birth rate: This entry gives the average annual number of births during a year per 1,000 persons in the population at midyear; also known as crude birth rate. The birth rate is usually the dominant factor in determining the rate of population growth. It depends on both the level of fertility and the age structure of the population.

Budget: This entry includes revenues, total expenditures, and capital expenditures. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Capital: This entry gives the location of the seat of government.

Climate: This entry includes a brief description of typical weather regimes throughout the year.

Coastline: This entry gives the total length of the boundary between the land area (including islands) and the sea.

Communications: This category deals with the means of exchanging information and includes the telephone, radio, television, and Internet service provider entries.

Communications - note: This entry includes miscellaneous communications information of significance not included elsewhere.

Constitution: This entry includes the dates of adoption, revisions, and major amendments.

Country data codes: see **Data codes**

Country map: Most versions of the *Factbook* provide a country map in color. The maps were produced from the best information available at the time of preparation. Names and/or boundaries may have changed subsequently.

Notes and Definitions (continued)

Country name: This entry includes all forms of the country's name approved by the US Board on Geographic Names (Italy is used as an example): *conventional long form* (Italian Republic), *conventional short form* (Italy), *local long form* (Repubblica Italiana), *local short form* (Italia), *former* (Kingdom of Italy), as well as the *abbreviation*. Also see the **Terminology** note.

Currency: This entry identifies the national medium of exchange and its basic subunit.

Currency code: This entry gives the International Organization for Standardization (ISO) 4217 alphabetic currency code for each country.

Data codes: This information is presented in **Appendix D: Cross-Reference List of Country Data Codes** and **Appendix E: Cross-Reference List of Hydrographic Data Codes**. This appendix includes the US Government approved Federal Information Processing Standards (FIPS) codes, the International Organization for Standardization (ISO) codes, and Internet codes for land entities. The appendix also includes the International Hydrographic Organization (IHO) codes, Aeronautical Chart and Information Center (ACIC; now a part of the National Imagery and Mapping Agency or NIMA) codes, and Defense Intelligence Agency (DIA) codes for hydrographic entities. The US Government has not yet approved a standard for hydrographic data codes similar to the FIPS 10-4 standard for country data codes.

Date of information: In general, information available as of 1 January 2001, was used in the preparation of this edition.

Death rate: This entry gives the average annual number of deaths during a year per 1,000 population at midyear; also known as crude death rate. The death rate, while only a rough indicator of the mortality situation in a country, accurately indicates the current mortality impact on population growth. This indicator is significantly affected by age distribution, and most countries will eventually show a rise in the overall death rate, in spite of continued decline in mortality at all ages, as declining fertility results in an aging population.

Debt - external: This entry gives the total public and private debt owed to nonresidents repayable in foreign currency, goods, or services.

Dependency status: This entry describes the formal relationship between a particular nonindependent entity and an independent state.

Dependent areas: This entry contains an alphabetical listing of all nonindependent entities associated in some way with a particular independent state.

Diplomatic representation: The US Government has diplomatic relations with 185 independent states, including 183 of the 189 UN members (excluded UN members are Bhutan, Cuba, Iran, Iraq, North Korea, and the US itself). In addition, the US has diplomatic relations with 3 independent states that are not in the UN - East Timor, Holy See, and Switzerland.

Diplomatic representation in the US: This entry includes the *chief of mission*, *chancery*, *telephone*, *FAX*, *consulate general* locations, and *consulate* locations.

Diplomatic representation from the US: This entry includes the *chief of mission*, *embassy address*, *mailing address*, *telephone number*, *FAX number*, *branch office* locations, *consulate general* locations, and *consulate* locations.

Notes and Definitions (continued)

Disputes - international: This entry includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims of one sort or another. Information regarding disputes over international terrestrial and maritime boundaries has been reviewed by the US Department of State. References to other situations involving borders or frontiers may also be included, such as resource disputes, geopolitical questions, or irredentist issues; however, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

Distribution of family income - Gini index: This index measures the degree of inequality in the distribution of family income in a country. The index is calculated from the Lorenz curve, in which cumulative family income is plotted against the number of families arranged from the poorest to the richest. The index is the ratio of (a) the area between a country's Lorenz curve and the 45 degree helping line to (b) the entire triangular area under the 45 degree line. The more nearly equal a country's income distribution, the closer its Lorenz curve to the 45 degree line and the lower its Gini index, e.g., a Scandinavian country with an index of 25. The more unequal a country's income distribution, the farther its Lorenz curve from the 45 degree line and the higher its Gini index, e.g., a Sub-Saharan country with an index of 50. If income were distributed with perfect equality, the Lorenz curve would coincide with the 45 degree line and the index would be zero; if income were distributed with perfect inequality, the Lorenz curve would coincide with the horizontal axis and the right vertical axis and the index would be 100.

Economic aid - donor: This entry refers to net official development assistance (ODA) from Organization for Economic Cooperation and Development (OECD) nations to developing countries and multilateral organizations. ODA is defined as financial assistance that is concessional in character, has the main objective to promote economic development and welfare of the less developed countries (LDCs), and contains a grant element of at least 25%. The entry does not cover other official flows (OOF) or private flows.

Economic aid - recipient: This entry, which is subject to major problems of definition and statistical coverage, refers to the net inflow of Official Development Finance (ODF) to recipient countries. The figure includes assistance from the World Bank, the IMF, and other international organizations and from individual nation donors. Formal commitments of aid are included in the data. Omitted from the data are grants by private organizations. Aid comes in various forms including outright grants and loans. The entry thus is the difference between new inflows and repayments.

Economy: This category includes the entries dealing with the size, development, and management of productive resources, i.e., land, labor, and capital.

Economy - overview: This entry briefly describes the type of economy, including the degree of market orientation, the level of economic development, the most important natural resources, and the unique areas of specialization. It also characterizes major economic events and policy changes in the most recent 12 months and may include a statement about one or two key future macroeconomic trends.

Electricity - consumption: This entry consists of total electricity generated annually plus imports and minus exports, expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Notes and Definitions (continued)

Electricity - exports: This entry is the total exported electricity in kilowatt-hours.

Electricity - imports: This entry is the total imported electricity in kilowatt-hours.

Electricity - production: This entry is the annual electricity generated expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity - production by source: This entry states the percentage share of electricity generated from each energy source. These are fossil fuel, hydro, nuclear, and other (solar, geothermal, and wind).

Elevation extremes: This entry includes both the *highest point* and the *lowest point*.

Entities: Some of the independent states, dependencies, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. "Independent state" refers to a people politically organized into a sovereign state with a definite territory. "Dependencies" and "areas of special sovereignty" refer to a broad category of political entities that are associated in some way with an independent state. "Country" names used in the table of contents or for page headings are usually the short-form names as approved by the US Board on Geographic Names and may include independent states, dependencies, and areas of special sovereignty, or other geographic entities. There are a total of 268 separate geographic entities in *The World Factbook* that may be categorized as follows:

Environment - current issues: This entry lists the most pressing and important environmental problems. The following terms and abbreviations are used throughout the entry:

acidification - the lowering of soil and water pH due to acid precipitation and deposition usually through precipitation; this process disrupts ecosystem nutrient flows and may kill freshwater fish and plants dependent on more neutral or alkaline conditions (see acid rain).

acid rain - characterized as containing harmful levels of sulfur dioxide or nitrogen oxide; acid rain is damaging and potentially deadly to the earth's fragile ecosystems; acidity is measured using the pH scale where 7 is neutral, values greater than 7 are considered alkaline, and values below 5.6 are considered acid precipitation; note - a pH of 2.4 (the acidity of vinegar) has been measured in rainfall in New England.

aerosol - a collection of airborne particles dispersed in a gas, smoke, or fog.

afforestation - converting a bare or agricultural space by planting trees and plants; reforestation involves replanting trees on areas that have been cut or destroyed by fire.

Notes and Definitions (continued)

asbestos - a naturally occurring soft fibrous mineral commonly used in fireproofing materials and considered to be highly carcinogenic in particulate form.

biodiversity - also biological diversity; the relative number of species, diverse in form and function, at the genetic, organism, community, and ecosystem level; loss of biodiversity reduces an ecosystem's ability to recover from natural or man-induced disruption.

bio-indicators - a plant or animal species whose presence, abundance, and health reveal the general condition of its habitat.

biomass - the total weight or volume of living matter in a given area or volume.

carbon cycle - the term used to describe the exchange of carbon (in various forms, e.g., as carbon dioxide) between the atmosphere, ocean, terrestrial biosphere, and geological deposits.

catchments - assemblages used to capture and retain rainwater and runoff; an important water management technique in areas with limited freshwater resources, such as Gibraltar.

DDT (dichloro-diphenyl-trichloro-ethane) - a colorless, odorless insecticide that has toxic effects on most animals; the use of DDT was banned in the US in 1972.

defoliants - chemicals which cause plants to lose their leaves artificially; often used in agricultural practices for weed control, and may have detrimental impacts on human and ecosystem health.

deforestation - the destruction of vast areas of forest (e.g., unsustainable forestry practices, agricultural and range land clearing, and the over exploitation of wood products for use as fuel) without planting new growth.

desertification - the spread of desert-like conditions in arid or semi-arid areas, due to overgrazing, loss of agriculturally productive soils, or climate change.

dredging - the practice of deepening an existing waterway; also, a technique used for collecting bottom-dwelling marine organisms (e.g., shellfish) or harvesting coral, often causing significant destruction of reef and ocean-floor ecosystems.

drift-net fishing - done with a net, miles in extent, that is generally anchored to a boat and left to float with the tide; often results in an over harvesting and waste of large populations of non-commercial marine species (by-catch) by its effect of "sweeping the ocean clean".

ecosystems - ecological units comprised of complex communities of organisms and their specific environments.

effluents - waste materials, such as smoke, sewage, or industrial waste which are released into the environment, subsequently polluting it.

endangered species - a species that is threatened with extinction either by direct hunting or habitat destruction.

freshwater - water with very low soluble mineral content; sources include lakes, streams, rivers, glaciers, and underground aquifers.

greenhouse gas - a gas that "traps" infrared radiation in the lower atmosphere causing surface warming; water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, and ozone are the primary greenhouse gases in the Earth's atmosphere.

groundwater - water sources found below the surface of the earth often in naturally occurring reservoirs in permeable rock strata; the source for wells and natural springs.

Highlands Water Project - a series of dams constructed jointly by Lesotho and South Africa to redirect Lesotho's abundant water supply into a rapidly growing area in South Africa; while it is the largest infrastructure project in southern Africa, it is also the most costly and controversial; objections to the project include claims that it forces people from their homes, submerges farmlands, and squanders economic resources.

Notes and Definitions (continued)

Inuit Circumpolar Conference (ICC) - represents the 125,000 Inuits of Russia, Alaska, Canada, and Greenland in international environmental issues; a panel convenes every three years to determine the focus of the ICC; the most current concerns are long-range transport of pollutants, sustainable development, and climate change.

metallurgical plants - industries which specialize in the science, technology, and processing of metals; these plants produce highly concentrated and toxic wastes which can contribute to pollution of ground water and air when not properly disposed.

noxious substances - injurious, very harmful to living beings.

overgrazing - the grazing of animals on plant material faster than it can naturally regrow leading to the permanent loss of plant cover, a common effect of too many animals grazing limited range land.

ozone shield - a layer of the atmosphere composed of ozone gas (O₃) that resides approximately 25 miles above the Earth's surface and absorbs solar ultraviolet radiation that can be harmful to living organisms.

poaching - the illegal killing of animals or fish, a great concern with respect to endangered or threatened species.

pollution - the contamination of a healthy environment by man-made waste.

potable water - water that is drinkable, safe to be consumed.

salination - the process through which fresh (drinkable) water becomes salt (undrinkable) water; hence, desalination is the reverse process; also involves the accumulation of salts in topsoil caused by evaporation of excessive irrigation water, a process that can eventually render soil incapable of supporting crops.

siltation - occurs when water channels and reservoirs become clogged with silt and mud, a side effect of deforestation and soil erosion.

slash-and-burn agriculture - a rotating cultivation technique in which trees are cut down and burned in order to clear land for temporary agriculture: the land is used until its productivity declines at which point a new plot is selected and the process repeats; this practice is sustainable while population levels are low and time is permitted for regrowth of natural vegetation; conversely, where these conditions do not exist, the practice can have disastrous consequences for the environment.

soil degradation - damage to the land's productive capacity because of poor agricultural practices such as the excessive use of pesticides or fertilizers, soil compaction from heavy equipment, or erosion of topsoil, eventually resulting in reduced ability to produce agricultural products.

soil erosion - the removal of soil by the action of water or wind, compounded by poor agricultural practices, deforestation, overgrazing, and desertification.

ultraviolet (UV) radiation - a portion of the electromagnetic energy emitted by the sun and naturally filtered in the upper atmosphere by the ozone layer; UV radiation can be harmful to living organisms and has been linked to increasing rates of skin cancer in humans.

water-borne diseases - those in which the bacteria survive in, and is transmitted through, water; always a serious threat in areas with an untreated water supply.

Environment - international agreements: This entry separates country participation in international environmental agreements into two levels - *party to* and *signed but not ratified*. Agreements are listed in alphabetical order by the abbreviated form of the full name.

Notes and Definitions (continued)

Environmental agreements: This information is presented in **Appendix C: Selected International Environmental Agreements**, which includes the name, abbreviation, date opened for signature, date entered into force, objective, and parties by category.

Ethnic groups: This entry provides a rank ordering of ethnic groups starting with the largest and normally includes the percent of total population.

Exchange rates: This entry provides the official value of a country's monetary unit at a given date or over a given period of time, as expressed in units of local currency per US dollar and as determined by international market forces or official fiat.

Executive branch: This entry includes several subfields. *Chief of state* includes the name and title of the titular leader of the country who represents the state at official and ceremonial functions but may not be involved with the day-to-day activities of the government. *Head of government* includes the name and title of the top administrative leader who is designated to manage the day-to-day activities of the government. For example, in the UK, the monarch is the chief of state, and the prime minister is the head of government. In the US, the president is both the chief of state and the head of government. *Cabinet* includes the official name for this body of high-ranking advisers and the method for selection of members. *Elections* includes the nature of election process or accession to power, date of the last election, and date of the next election. *Election results* includes the percent of vote for each candidate in the last election.

Exports: This entry provides the total US dollar amount of exports on an f.o.b. (free on board) basis.

Exports - commodities: This entry provides a rank ordering of exported products starting with the most important; it sometimes includes the percent of total dollar value.

Exports - partners: This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Fiscal year: This entry identifies the beginning and ending months for a country's accounting period of 12 months, which often is the calendar year but which may begin in any month. All yearly references are for the calendar year (CY) unless indicated as a noncalendar fiscal year (FY).

Flag description: This entry provides a written flag description produced from actual flags or the best information available at the time the entry was written. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

Flag graphic: Most versions of the *Factbook* include a color flag at the beginning of the country profile. The flag graphics were produced from actual flags or the best information available at the time of preparation. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

GDP: This entry gives the gross domestic product (GDP) or value of all final goods and services produced within a nation in a given year. GDP dollar estimates in the *Factbook* are derived from purchasing power parity (PPP) calculations. See the note on **GDP methodology** for more information.

Notes and Definitions (continued)

GDP methodology: In the **Economy** section, GDP dollar estimates for all countries are derived from purchasing power parity (PPP) calculations rather than from conversions at official currency exchange rates. The PPP method involves the use of standardized international dollar price weights, which are applied to the quantities of final goods and services produced in a given economy. The data derived from the PPP method provide the best available starting point for comparisons of economic strength and well-being between countries. The division of a GDP estimate in domestic currency by the corresponding PPP estimate in dollars gives the PPP conversion rate. Whereas PPP estimates for OECD countries are quite reliable, PPP estimates for developing countries are often rough approximations. Most of the GDP estimates are based on extrapolation of PPP numbers published by the UN International Comparison Program (UNICP) and by Professors Robert Summers and Alan Heston of the University of Pennsylvania and their colleagues. In contrast, the currency exchange rate method involves a variety of international and domestic financial forces that often have little relation to domestic output. In developing countries with weak currencies the exchange rate estimate of GDP in dollars is typically one-fourth to one-half the PPP estimate. Furthermore, exchange rates may suddenly go up or down by 10% or more because of market forces or official fiat whereas real output has remained unchanged. On 12 January 1994, for example, the 14 countries of the African Financial Community (whose currencies are tied to the French franc) devalued their currencies by 50%. This move, of course, did not cut the real output of these countries by half. One important caution: the proportion of, say, defense expenditures as a percentage of GDP in local currency accounts may differ substantially from the proportion when GDP accounts are expressed in PPP terms, as, for example, when an observer tries to estimate the dollar level of Russian or Japanese military expenditures. Note: the numbers for GDP and other economic data can *not* be chained together from successive volumes of the *Factbook* because of changes in the US dollar measuring rod, revisions of data by statistical agencies, use of new or different sources of information, and changes in national statistical methods and practices.

GDP - composition by sector: This entry gives the percentage contribution of *agriculture, industry, and services* to total GDP.

GDP - per capita: This entry shows GDP on a purchasing power parity basis divided by population as of 1 July for the same year.

GDP - real growth rate: This entry gives GDP growth on an annual basis adjusted for inflation and expressed as a percent.

Geographic coordinates: This entry includes rounded latitude and longitude figures for the purpose of finding the approximate geographic center of an entity and is based on the *Gazetteer of Conventional Names*, Third Edition, August 1988, US Board on Geographic Names and on other sources.

Geographic names: This information is presented in **Appendix F: Cross-Reference List of Geographic Names**. It includes a listing of various alternate names, former names, local names, and regional names referenced to one or more related *Factbook* entries. Spellings are normally, but not always, those approved by the US Board on Geographic Names (BGN). Alternate names and additional information are included in parentheses.

Geography: This category includes the entries dealing with the natural environment and the effects of human activity.

Notes and Definitions (continued)

Geography - note: This entry includes miscellaneous geographic information of significance not included elsewhere.

GNP: Gross national product (GNP) is the value of all final goods and services produced within a nation in a given year, plus income earned by its citizens abroad, minus income earned by foreigners from domestic production. The *Factbook*, following current practice, uses GDP rather than GNP to measure national production. However, the user must realize that in certain countries net remittances from citizens working abroad may be important to national well-being.

Government: This category includes the entries dealing with the system for the adoption and administration of public policy.

Government type: This entry gives the basic form of government (e.g., republic, constitutional monarchy, federal republic, parliamentary democracy, military dictatorship).

Government - note: This entry includes miscellaneous government information of significance not included elsewhere.

Gross domestic product: see GDP

Gross national product: see GNP

Gross world product: see GWP

GWP: This entry gives the gross world product (GWP) or aggregate value of all final goods and services produced worldwide in a given year.

Heliports: This entry gives the total number of established helicopter takeoff and landing sites (which may or may not have fuel or other services).

Highways: This entry states the *total* length of the highway system and the length of the *paved* and *unpaved* parts.

HIV/AIDS – adult prevalence rate: This entry gives an estimate of the percentage of adults (aged 15-49) living with HIV/AIDS. The adult prevalence rate is calculated by dividing the estimated number of adults living with HIV/AIDS at yearend by the total adult population at yearend.

HIV/AIDS – deaths: This entry gives an estimate of the number of adults and children who died of AIDS during a given calendar year.

HIV/AIDS – people living with HIV/AIDS: This entry gives an estimate of all people (adults and children) alive at yearend with HIV infection, whether or not they have developed symptoms of AIDS.

Household income or consumption by percentage share: Data on household income or consumption come from household surveys, the results adjusted for household size. Nations use different standards and procedures in collecting and adjusting the data. Surveys based on income will normally show a more unequal distribution than surveys based on consumption. The quality of surveys is improving with time, yet caution is still necessary in making inter-country comparisons.

Hydrographic data codes: see Data codes

Notes and Definitions *(continued)*

Illicit drugs: This entry gives information on the five categories of illicit drugs - narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside of medical channels.

Cannabis (*Cannabis sativa*) is the common hemp plant, which provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil).

Coca (mostly *Erythroxylum coca*) is a bush with leaves that contain the stimulant used to make cocaine. Coca is not to be confused with cocoa, which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter.

Cocaine is a stimulant derived from the leaves of the coca bush.

Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid).

Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual.

Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual.

Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn).

Hashish is the resinous exudate of the cannabis or hemp plant (*Cannabis sativa*).

Heroin is a semisynthetic derivative of morphine.

Mandrax is a trade name for methaqualone, a pharmaceutical depressant.

Marijuana is the dried leaf of the cannabis or hemp plant (*Cannabis sativa*).

Methaqualone is a pharmaceutical depressant, referred to as mandrax in Southwest Asia and Africa.

Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol with codeine, Empirin with codeine, Robitussin AC), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil).

Opium is the brown, gummy exudate of the incised, unripe seedpod of the opium poppy.

Opium poppy (*Papaver somniferum*) is the source for the natural and semisynthetic narcotics.

Poppy straw concentrate is the alkaloid derived from the mature, dried opium poppy.

Qat (kat, khat) is a stimulant from the buds or leaves of *Catha edulis* that is chewed or drunk as tea.

Quaaludes is the North American slang term for methaqualone, a pharmaceutical depressant.

Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), ephedrine, ecstasy (clarity, essence, doctor, Adam), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

Notes and Definitions *(continued)*

Imports: This entry provides the total US dollar amount of imports on a c.i.f. (cost, insurance, and freight) or f.o.b. (free on board) basis.

Imports - commodities: This entry provides a rank ordering of imported products starting with the most important; it sometimes includes the percent of total dollar value.

Imports - partners: This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Independence: For most countries, this entry gives the date that sovereignty was achieved and from which nation, empire, or trusteeship. For the other countries, the date given may not represent "independence" in the strict sense, but rather some significant nationhood event such as the traditional founding date or the date of unification, federation, confederation, establishment, fundamental change in the form of government, or state succession. Dependent areas include the notation "none" followed by the nature of their dependency status. Also see the **Terminology** note.

Industrial production growth rate: This entry gives the annual percentage increase in industrial production (includes manufacturing, mining, and construction).

Industries: This entry provides a rank ordering of industries starting with the largest by value of annual output.

Infant mortality rate: This entry gives the number of deaths of infants under one year old in a given year per 1,000 live births in the same year. This rate is often used as an indicator of the level of health in a country.

Inflation rate (consumer prices): This entry furnishes the annual percent change in consumer prices compared with the previous year's consumer prices.

Internet country code: This entry includes the two-letter codes maintained by the International Organization for Standardization (ISO) in the ISO 3166 Alpha-2 list and used by the Internet Assigned Numbers Authority (IANA) to establish country-coded top-level domains (ccTLDs).

Internet Service Providers (ISPs): This entry supplies the number of Internet Service Providers within a country. An ISP is defined as a company that provides access to the Internet.

Internet users: This entry gives the number of users within a country that access the Internet. Statistics vary from country to country and may include users who access the Internet at least several times a week to those who access it only once within a period of several months.

International disputes: see **Disputes - international**

International organization participation: This entry lists in alphabetical order by abbreviation those international organizations in which the subject country is a member or participates in some other way.

International organizations: This information is presented in **Appendix B: International Organizations and Groups** which includes the name, abbreviation, date established, aim, and members by category.

Notes and Definitions (continued)

Introduction: This category includes one entry, **Background**.

Irrigated land: This entry gives the number of square kilometers of land area that is artificially supplied with water.

Judicial branch: This entry contains the name(s) of the highest court(s) and a brief description of the selection process for members.

Labor force: This entry contains the total labor force figure.

Labor force - by occupation: This entry contains a rank ordering of component parts of the labor force by occupation.

Land boundaries: This entry contains the total length of all land boundaries and the individual lengths for each of the contiguous border countries.

Land use: This entry contains the percentage shares of total land area for three different types of land use: *arable land* - land cultivated for crops that are replanted after each harvest like wheat, maize, and rice; *permanent crops* - land cultivated for crops that are not replanted after each harvest like citrus, coffee, and rubber; includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber; *other* - any land not arable or under permanent crops; includes permanent meadows and pastures, forests and woodlands, built-on areas, roads, barren land, etc.

Languages: This entry provides a rank ordering of languages starting with the largest and sometimes includes the percent of total population speaking that language.

Legal system: This entry contains a brief description of the legal system's historical roots, role in government, and acceptance of International Court of Justice (ICJ) jurisdiction.

Legislative branch: This entry contains information on the structure (unicameral, bicameral, tricameral), formal name, number of seats, and term of office. *Elections* includes the nature of election process or accession to power, date of the last election, and date of the next election. *Election results* includes the percent of vote and/or number of seats held by each party in the last election.

Life expectancy at birth: This entry contains the average number of years to be lived by a group of people born in the same year, if mortality at each age remains constant in the future. The entry includes total population as well as the male and female components. Life expectancy at birth is also a measure of overall quality of life in a country and summarizes the mortality at all ages. It can also be thought of as indicating the potential return on investment in human capital and is necessary for the calculation of various actuarial measures.

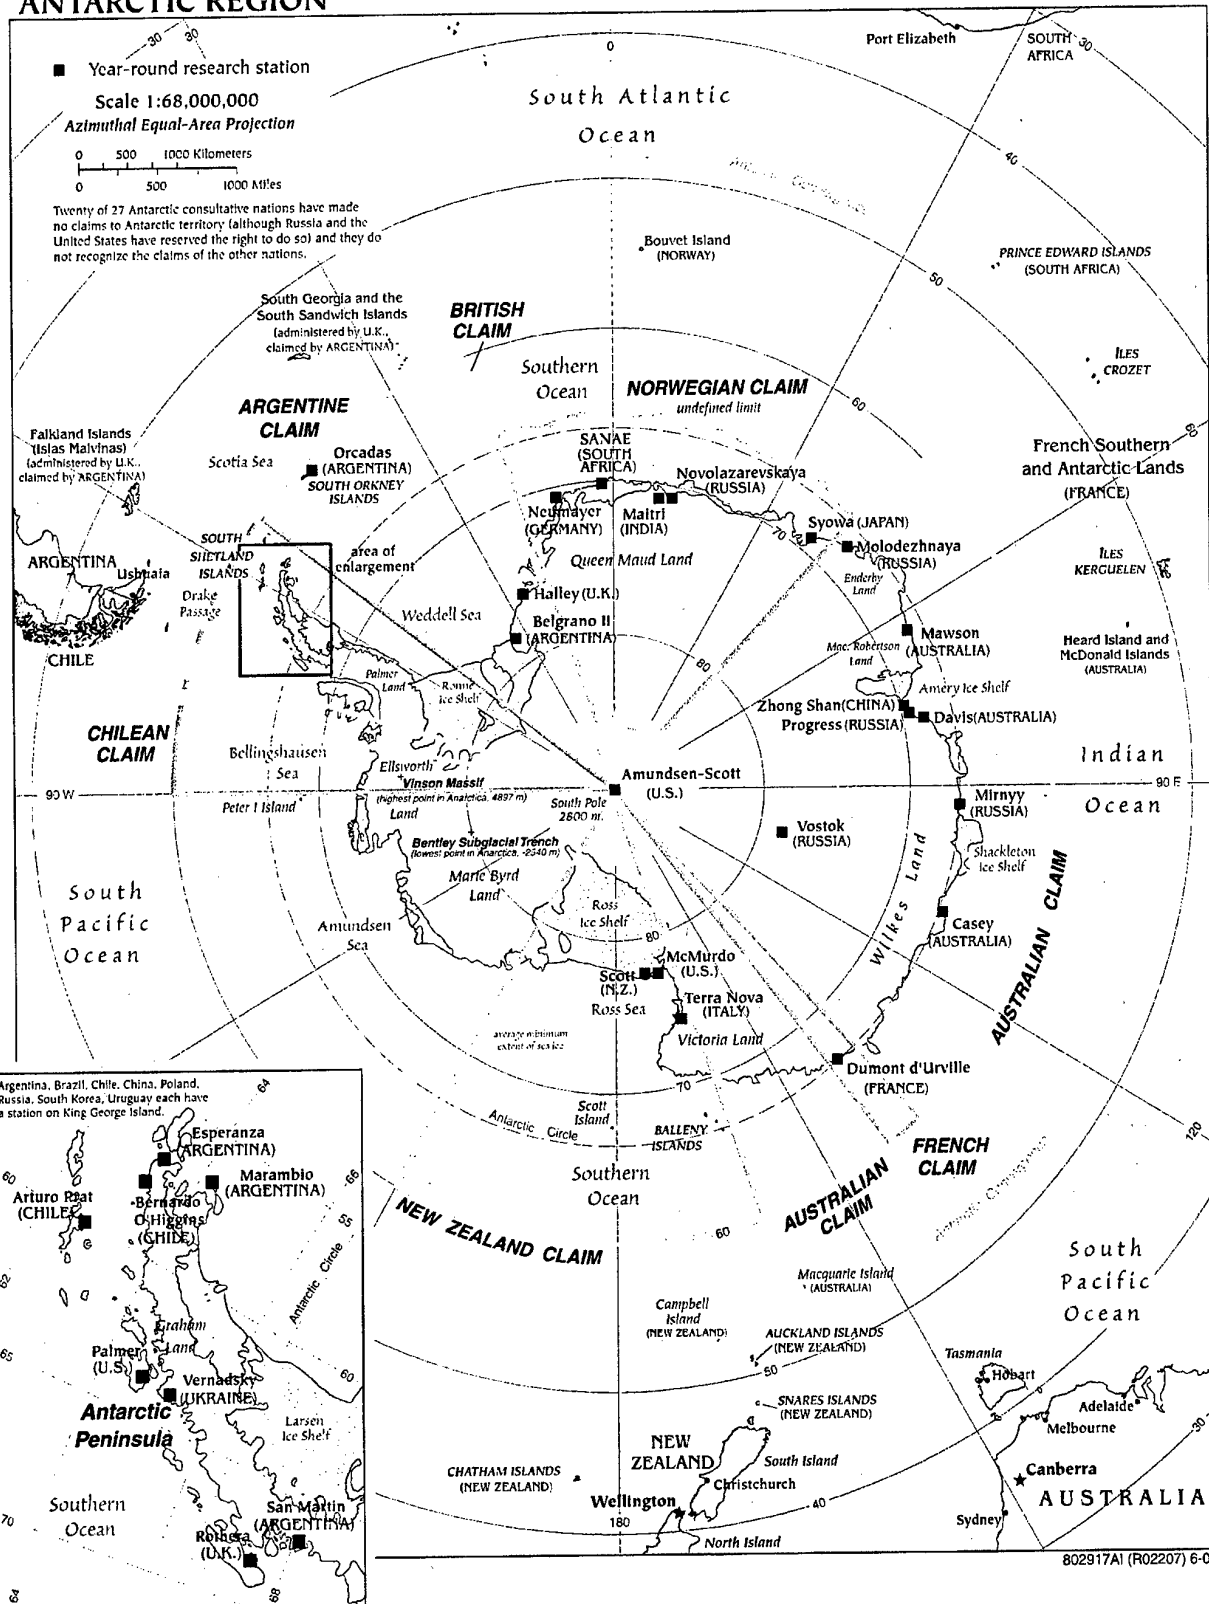

Literacy: This entry includes a definition of literacy and Census Bureau percentages for the total population, males, and females. There are no universal definitions and standards of literacy. Unless otherwise specified, all rates are based on the most common definition - the ability to read and write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of the *Factbook*. Information on literacy, while not a perfect measure of educational results, is probably the most easily available and valid for international comparisons. Low levels of literacy, and education in general, can impede the economic development of a country in the current rapidly changing, technology-driven world.

ANTARCTIC REGION

SOUTHEAST ASIA

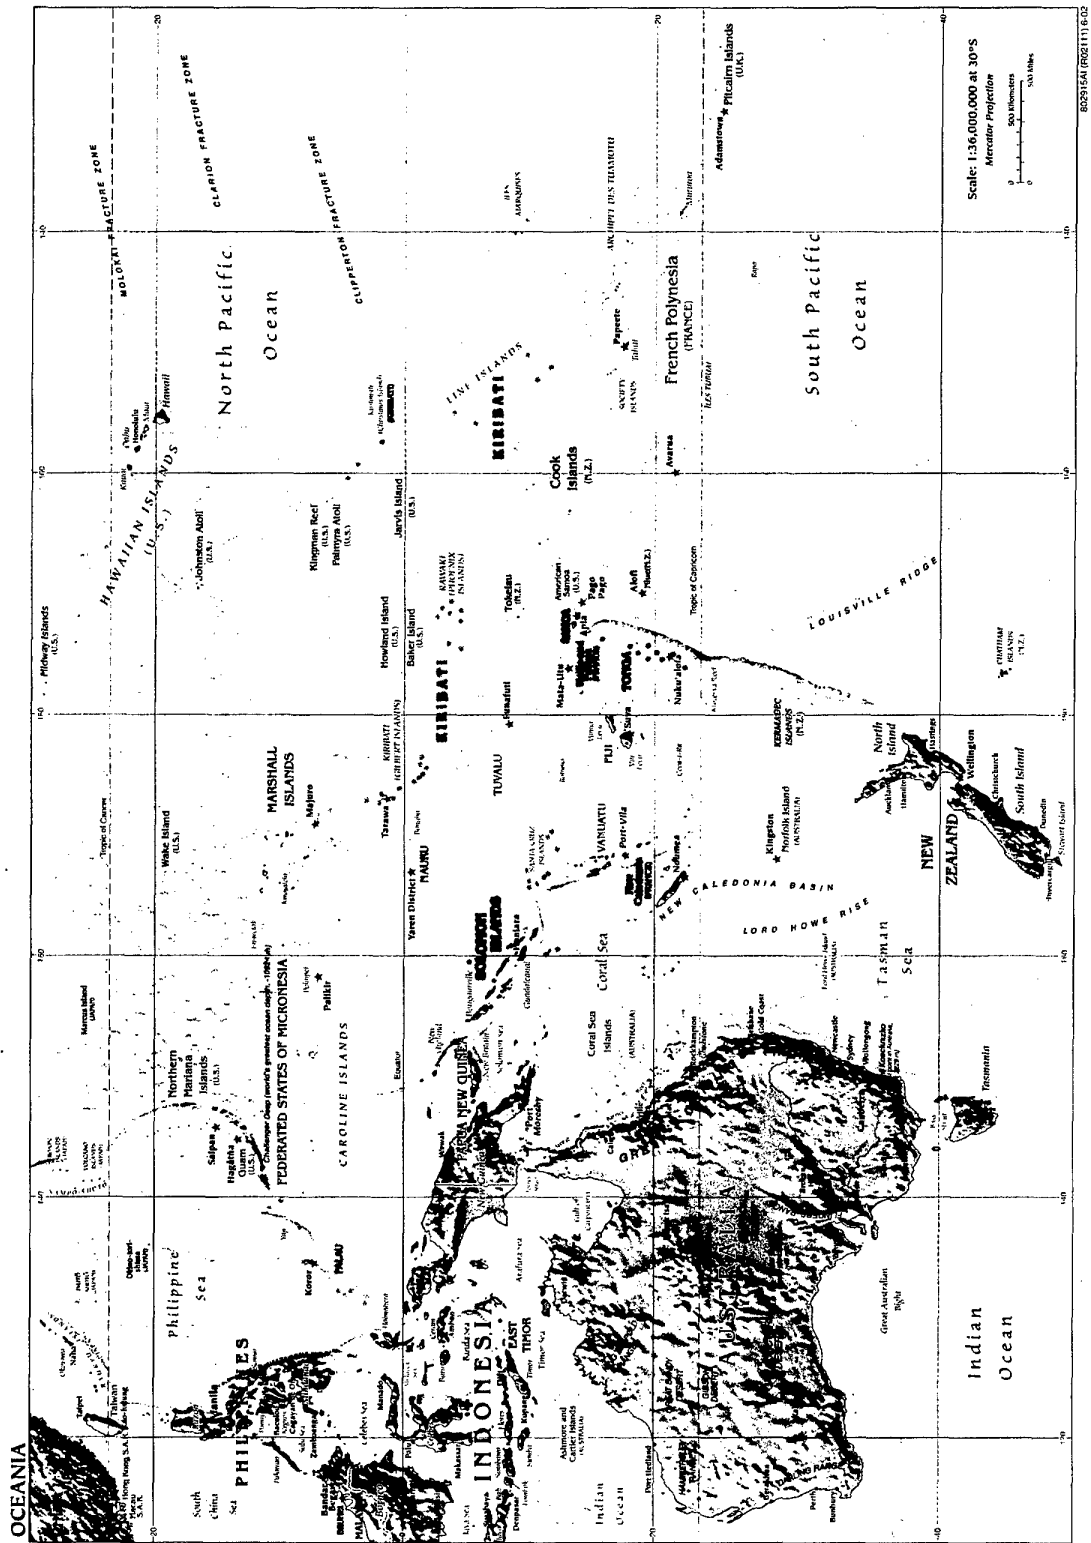

The map displays the state of Alaska and its international borders with Russia to the west and Canada to the east. Key geographical features include the Bering Sea, Chukchi Sea, Arctic Circle, and the Gulf of Alaska. Major Alaskan cities such as Anchorage, Fairbanks, Nome, Bethel, and Valdez are marked. The Aleutian Islands are shown in the southwest. A scale bar indicates a ratio of 1:37,000,000, with distances in kilometers and miles. An inset map in the bottom right corner provides a detailed view of Washington, D.C., highlighting the White House, U.S. Capitol, and surrounding areas, with a scale of 1:360,000.

This is a detailed black and white map of South America, showing political boundaries, major cities, and geographical features. The map is oriented with North at the top. Key features include:

- Geographical Features:** The Amazon Basin is centrally located, with the Amazon River and its tributaries (Rio Negro, Rio Madeira, Rio Branco, Rio Paraguay, Rio Uruguay, Rio de la Plata) clearly marked. The Andes Mountains run along the western coast, with labels for the Cordillera Occidental and Cordillera Oriental. The Patagonia region is shown in the south, including the Strait of Magellan and the Peninsula Valdes.
- Political Boundaries:** Countries shown include Colombia, Venezuela, Ecuador, Peru, Brazil, Bolivia, Paraguay, Uruguay, Argentina, and Chile. The map also shows the Falkland Islands (Islas Malvinas) and the South Georgia and the South Sandwich Islands.
- Major Cities:** Numerous cities are labeled, including Bogotá, Caracas, Quito, Lima, La Paz, Sucre, Brasilia, Rio de Janeiro, São Paulo, Buenos Aires, Montevideo, Santiago, Valparaíso, and Punta Arenas.
- Oceans and Seas:** The Caribbean Sea is to the north, the North Atlantic Ocean to the northeast, and the South Atlantic Ocean to the southeast.
- Scale and Projection:** A scale bar at the bottom left indicates a scale of 1:35,000,000. The projection is noted as "Azimuthal Equal-Area Projection".
- Other Labels:** The map includes labels for the Equator, Tropic of Capricorn, and various islands and archipelagos, such as the Islas de San Andrés (Colombia), Isla de Malpelo (Colombia), Isla San Ambrosio (Chile), Isla San Félix (Chile), and the Archipiélago Juan Fernández (Chile).

Notes and Definitions *(continued)*

UHF – ultra high frequency; any radio frequency in the 300- to 3,000-MHz range.

VHF – very high frequency; any radio frequency in the 30- to 300-MHz range.

Telephones - main lines in use: This entry gives the total number of main telephone lines in use.

Telephones - mobile cellular: This entry gives the total number of mobile cellular telephones in use.

Television - broadcast stations: This entry gives the total number of separate broadcast stations plus any repeater stations.

Terminology: Due to the highly structured nature of the *Factbook* database, some collective generic terms have to be used. For example, the word **Country** in the **Country name** entry refers to a wide variety of dependencies, areas of special sovereignty, uninhabited islands, and other entities in addition to the traditional countries or independent states. **Military** is also used as an umbrella term for various civil defense, security, and defense activities in many entries. The **Independence** entry includes the usual colonial independence dates and former ruling states as well as other significant nationhood dates such as the traditional founding date or the date of unification, federation, confederation, establishment, or state succession that are not strictly independence dates. Dependent areas have the nature of their dependency status noted in this same entry.

Terrain: This entry contains a brief description of the topography.

Total fertility rate: This entry gives a figure for the average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age. The total fertility rate is a more direct measure of the level of fertility than the crude birth rate, since it refers to births per woman. This indicator shows the potential for population growth in the country. High rates will also place some limits on the labor force participation rates for women. Large numbers of children born to women indicate large family sizes that might limit the ability of the families to feed and educate their children.

Transnational Issues: This category includes only two entries at the present time - **Disputes - international** and **Illicit drugs** - that deal with current issues going beyond national boundaries.

Transportation: This category includes the entries dealing with the means for movement of people and goods.

Transportation - note: This entry includes miscellaneous transportation information of significance not included elsewhere.

Unemployment rate: This entry contains the percent of the labor force that is without jobs. Substantial underemployment might be noted.

Waterways: This entry gives the total length and individual names of navigable rivers, canals, and other inland bodies of water.

Years: All year references are for the calendar year (CY) unless indicated as fiscal year (FY). The calendar year is an accounting period of 12 months from 1 January to 31 December. The fiscal year is an accounting period of 12 months other than 1 January to 31 December.

Notes and Definitions (continued)

Medarabel - the Middle East Telecommunications Project of the International Telecommunications Union (ITU) providing a modern telecommunications network, primarily by microwave radio relay, linking Algeria, Djibouti, Egypt, Jordan, Libya, Morocco, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, and Yemen; it was initially started in Morocco in 1970 by the Arab Telecommunications Union (ATU) and was known at that time as the Middle East Mediterranean Telecommunications Network.

microwave radio relay - transmission of long distance telephone calls and television programs by highly directional radio microwaves that are received and sent on from one booster station to another on an optical path.

NMT - Nordic Mobile Telephone; an analog cellular telephone system that was developed jointly by the national telecommunications authorities of the Nordic countries (Denmark, Finland, Iceland, Norway, and Sweden).

Orbita - a Russian television service; also the trade name of a packet-switched digital telephone network.

radiotelephone communications - the two-way transmission and reception of sounds by broadcast radio on authorized frequencies using telephone handsets.

PanAmSat - PanAmSat Corporation (Greenwich, CT).

satellite communication system - a communication system consisting of two or more earth stations and at least one satellite that provide long distance transmission of voice, data, and television; the system usually serves as a trunk connection between telephone exchanges; if the earth stations are in the same country, it is a domestic system.

satellite earth station - a communications facility with a microwave radio transmitting and receiving antenna and required receiving and transmitting equipment for communicating with satellites.

satellite link - a radio connection between a satellite and an earth station permitting communication between them, either one-way (down link from satellite to earth station - television receive-only transmission) or two-way (telephone channels).

SHF - super high frequency; any radio frequency in the 3,000- to 30,000-MHz range.

shortwave - radio frequencies (from 1.605 to 30 MHz) that fall above the commercial broadcast band and are used for communication over long distances.

Solidaridad - geosynchronous satellites in Mexico's system of international telecommunications in the Western Hemisphere.

Statsionar - Russia's geostationary system for satellite telecommunications.

submarine cable - a cable designed for service under water.

TAT - Trans-Atlantic Telephone; any of a number of high-capacity submarine coaxial telephone cables linking Europe with North America.

telex - facsimile service between subscriber stations via the public switched telephone network or the international Data network.

telegraph - a telecommunications system designed for unmodulated electric impulse transmission.

telex - a communication service involving teletypewriters connected by wire through automatic exchanges.

tropospheric scatter - a form of microwave radio transmission in which the troposphere is used to scatter and reflect a fraction of the incident radio waves back to earth; powerful, highly directional antennas are used to transmit and receive the microwave signals; reliable over-the-horizon communications are realized for distances up to 600 miles in a single hop; additional hops can extend the range of this system for very long distances.

trunk network - a network of switching centers, connected by multichannel trunk lines.

Notes and Definitions (continued)

An international direct dial telephone call placed from another country to the US would be as follows:

international access code + [1] (202) 939-xxxx, where
[1] is the country code for the US,
(202) is the area code for Washington, DC,
939 is the local exchange, and
xxxx is the local telephone number.

Telephone system: This entry includes a brief characterization of the system with details on the *domestic* and *international* components. The following terms and abbreviations are used throughout the entry:

Africa ONE - a fiber-optic submarine cable link encircling the continent of Africa.

Arabsat - Arab Satellite Communications Organization (Riyadh, Saudi Arabia).

Autodin - Automatic Digital Network (US Department of Defense).

CB - citizen's band mobile radio communications.

cellular telephone system - the telephones in this system are radio transceivers, with each instrument having its own private radio frequency and sufficient radiated power to reach the booster station in its area (cell), from which the telephone signal is fed to a telephone exchange.

Central American Microwave System - a trunk microwave radio relay system that links the countries of Central America and Mexico with each other.

coaxial cable - a multichannel communication cable consisting of a central conducting wire, surrounded by and insulated from a cylindrical conducting shell; a large number of telephone channels can be made available within the insulated space by the use of a large number of carrier frequencies.

Comsat - Communications Satellite Corporation (US).

DSN - Defense Switched Network (formerly Automatic Voice Network or Autovon); basic general-purpose, switched voice network of the Defense Communications System (US Department of Defense).

Eutelsat - European Telecommunications Satellite Organization (Paris).

fiber-optic cable - a multichannel communications cable using a thread of optical glass fibers as a transmission medium in which the signal (voice, video, etc.) is in the form of a coded pulse of light.

GSM - a global system for mobile (cellular) communications devised by the Groupe Special Mobile of the pan-European standardization organization, Conference Europeenne des Posts et Telecommunications (CEPT) in 1982.

HF - high frequency; any radio frequency in the 3,000- to 30,000-kHz range.

Inmarsat - International Mobile Satellite Organization (London); provider of global mobile satellite communications for commercial, distress, and safety applications at sea, in the air, and on land.

Intelsat - International Telecommunications Satellite Organization (Washington, DC).

Intersputnik - International Organization of Space Communications (Moscow); first established in the former Soviet Union and the East European countries, it is now marketing its services worldwide with earth stations in North America, Africa, and East Asia.

landline - communication wire or cable of any sort that is installed on poles or buried in the ground.

Marecs - Maritime European Communications Satellite used in the Inmarsat system on lease from the European Space Agency.

Marisat - satellites of the Comsat Corporation that participate in the Inmarsat system.

Notes and Definitions *(continued)*

Population below poverty line: National estimates of the percentage of the population lying below the poverty line are based on surveys of sub-groups, with the results weighted by the number of people in each group. Definitions of poverty vary considerably among nations. For example, rich nations generally employ more generous standards of poverty than poor nations.

Population growth rate: The average annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be positive or negative. The growth rate is a factor in determining how great a burden would be imposed on a country by the changing needs of its people for infrastructure (e.g., schools, hospitals, housing, roads), resources (e.g., food, water, electricity), and jobs. Rapid population growth can be seen as threatening by neighboring countries.

Ports and harbors: This entry lists the major ports and harbors selected on the basis of overall importance to each country. This is determined by evaluating a number of factors (e.g., dollar value of goods handled, gross tonnage, facilities, military significance).

Radio broadcast stations: This entry includes the total number of AM, FM, and shortwave broadcast stations.

Railways: This entry states the *total* route length of the railway network and of its component parts by gauge: *broad, dual, narrow, standard, and other*.

Reference maps: This section includes world and regional maps.

Religions: This entry includes a rank ordering of religions by adherents starting with the largest group and sometimes includes the percent of total population.

Sex ratio: This entry includes the number of males for each female in five age groups - *at birth, under 15 years, 15-64 years, 65 years and over, and for the total population*. Sex ratio at birth has recently emerged as an indicator of certain kinds of sex discrimination in some countries. For instance, high sex ratios at birth in some Asian countries are now attributed to sex-selective abortion and infanticide due to a strong preference for sons. This will affect future marriage patterns and fertility patterns. Eventually it could cause unrest among young adult males who are unable to find partners.

Suffrage: This entry gives the age at enfranchisement and whether the right to vote is universal or restricted.

Telephone numbers: All telephone numbers in the *Factbook* consist of the country code in brackets, the city or area code (where required) in parentheses, and the local number. The one component that is not presented is the international access code, which varies from country to country. For example, an international direct dial telephone call placed from the US to Madrid, Spain, would be as follows:

011 [34] (1) 577-xxxx, where
011 is the international access code for station-to-station calls;
01 is for calls other than station-to-station calls,
[34] is the country code for Spain,
(1) is the city code for Madrid,
577 is the local exchange, and
xxxx is the local telephone number.

Notes and Definitions (continued)

People: This category includes the entries dealing with the characteristics of the people and their society.

People - note: This entry includes miscellaneous demographic information of significance not included elsewhere.

Personal Names - Capitalization: The *Factbook* capitalizes the surname or family name of individuals for the convenience of our users who are faced with a world of different cultures and naming conventions. An example would be President SADDAM Husayn of Iraq. Saddam is his name and Husayn is his father's name. He may be referred to as President SADDAM Husayn or President SADDAM, but **not** President Husayn. The need for capitalization, bold type, underlining, italics, or some other indicator of the individual's surname is apparent in the following examples: MAO Zedong, Fidel CASTRO Ruz, George W. BUSH, and TUNKU SALAHUDDIN Abdul Aziz Shah ibni Al-Marhum Sultan Hisammuddin Alam Shah. By knowing the surname, a short form without all capital letters can be used with confidence as in President Saddam, President Castro, Chairman Mao, President Bush, or Sultan Tunku Salahuddin. The same system of capitalization is extended to the names of leaders with surnames that are not commonly used such as Queen ELIZABETH II.

Personal Names - Spelling: The romanization of personal names in the *Factbook* normally follows the same transliteration system used by the US Board on Geographic Names for spelling place names. At times, however, a foreign leader expressly indicates a preference for, or the media or official documents regularly use, a romanized spelling that differs from the transliteration derived from the US Government standard. In such cases, the *Factbook* uses the alternative spelling.

Personal Names - Titles: The *Factbook* capitalizes any valid title (or short form of it) immediately preceding a person's name. A title standing alone is lowercased. Examples: President PUTIN and President BUSH are chiefs of state. In Russia, the president is chief of state and the premier is the head of the government, while in the US, the president is both chief of state and head of government.

Pipelines: This entry gives the lengths and types of pipelines for transporting products like natural gas, crude oil, or petroleum products.

Political parties and leaders: This entry includes a listing of significant political organizations and their leaders.

Political pressure groups and leaders: This entry includes a listing of organizations with leaders involved in politics, but not standing for legislative election.

Population: This entry gives an estimate from the US Bureau of the Census based on statistics from population censuses, vital statistics registration systems, or sample surveys pertaining to the recent past and on assumptions about future trends. The total population presents one overall measure of the potential impact of the country on the world and within its region. Note: starting with the 1993 *Factbook*, demographic estimates for some countries (mostly African) have explicitly taken into account the effects of the growing impact of the HIV/AIDS epidemic. These countries are currently: The Bahamas, Benin, Botswana, Brazil, Burkina Faso, Burma, Burundi, Cambodia, Cameroon, Central African Republic, Democratic Republic of the Congo, Republic of the Congo, Cote d'Ivoire, Ethiopia, Gabon, Ghana, Guyana, Haiti, Honduras, Kenya, Lesotho, Malawi, Mozambique, Namibia, Nigeria, Rwanda, South Africa, Swaziland, Tanzania, Thailand, Togo, Uganda, Zambia, and Zimbabwe.

Notes and Definitions *(continued)*

Military branches: This entry lists the names of the ground, naval, air, marine, and other defense or security forces.

Military expenditures - dollar figure: This entry gives current military expenditures in US dollars; the figure is calculated by multiplying the estimated defense spending in percentage terms by the gross domestic product (GDP) calculated on an exchange rate basis *not* purchasing power parity (PPP) terms. Dollar figures for military expenditures should be treated with caution because of different price patterns and accounting methods among nations, as well as wide variations in the strength of their currencies.

Military expenditures - percent of GDP: This entry gives current military expenditures as an estimated percent of gross domestic product (GDP).

Military manpower - availability: This entry gives the total numbers of males and females age 15-49 and assumes that every individual is fit to serve.

Military manpower - fit for military service: This entry gives the number of males and females age 15-49 fit for military service. This is a more refined measure of potential military manpower availability which tries to correct for the health situation in the country and reduces the maximum potential number to a more realistic estimate of the actual number fit to serve.

Military manpower - military age: This entry gives the minimum age at which an individual may volunteer for military service or be subject to conscription.

Military manpower - reaching military age annually: This entry gives the number of draft-age males and females entering the military manpower pool in any given year and is a measure of the availability of draft-age young adults.

Military - note: This entry includes miscellaneous military information of significance not included elsewhere.

Money figures: All money figures are expressed in contemporaneous US dollars unless otherwise indicated.

National holiday: This entry gives the primary national day of celebration - usually independence day.

Nationality: This entry provides the identifying terms for citizens - *noun* and *adjective*.

Natural hazards: This entry lists potential natural disasters.

Natural resources: This entry lists a country's mineral, petroleum, hydropower, and other resources of commercial importance.

Net migration rate: This entry includes the figure for the difference between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (e.g., 3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (e.g., -9.26 migrants/1,000 population). The net migration rate indicates the contribution of migration to the overall level of population change. High levels of migration can cause problems such as increasing unemployment and potential ethnic strife (if people are coming in) or a reduction in the labor force, perhaps in certain key sectors (if people are leaving).

Notes and Definitions (continued)

two subfields - *total* and *ships by type*. *Total* includes the total number of ships (1,000 GRT or over), total DWT for those ships, and total GRT for those ships. DWT or dead weight tonnage is the total weight of cargo, plus bunkers, stores, etc. that a ship can carry when immersed to the appropriate load line. GRT or gross register tonnage is a figure obtained by measuring the entire sheltered volume of the ship available for cargo and passengers and converting it to tons on the basis of 100 cubic feet per ton; there is no stable relationship between GRT and DWT. *Ships by type* includes a listing of barge carriers, bulk cargo ships, cargo ships, chemical tankers, combination bulk carriers, combination ore/oil carriers, container ships, liquefied gas tankers, livestock carriers, multifunctional large-load carriers, petroleum tankers, passenger ships, passenger/cargo ships, railcar carriers, refrigerated cargo ships, roll-on/roll-off cargo ships, short-sea passenger ships, specialized tankers, and vehicle carriers.

A captive register is a register of ships maintained by a territory, possession, or colony primarily or exclusively for the use of ships owned in the parent country; it is also referred to as an offshore register, the offshore equivalent of an internal register. Ships on a captive register will fly the same flag as the parent country, or a local variant of it, but will be subject to the maritime laws and taxation rules of the offshore territory. Although the nature of a captive register makes it especially desirable for ships owned in the parent country, just as in the internal register, the ships may also be owned abroad. The captive register then acts as a flag of convenience register, except that it is not the register of an independent state.

A flag of convenience register is a national register offering registration to a merchant ship not owned in the flag state. The major flags of convenience (FOC) attract ships to their registers by virtue of low fees, low or nonexistent taxation of profits, and liberal manning requirements. True FOC registers are characterized by having relatively few of the registered ships actually owned in the flag state. Thus, while virtually any flag can be used for ships under a given set of circumstances, an FOC register is one where the majority of the merchant fleet is owned abroad. It is also referred to as an open register.

A flag state is the nation in which a ship is registered and which holds legal jurisdiction over operation of the ship, whether at home or abroad. Maritime legislation of the flag state determines how a ship is crewed and taxed and whether a foreign-owned ship may be placed on the register.

An internal register is a register of ships maintained as a subset of a national register. Ships on the internal register fly the national flag and have that nationality but are subject to a separate set of maritime rules from those on the main national register. These differences usually include lower taxation of profits, use of foreign nationals as crewmembers, and, usually, ownership outside the flag state (when it functions as an FOC register). The Norwegian International Ship Register and Danish International Ship Register are the most notable examples of an internal register. Both have been instrumental in stemming flight from the national flag to flags of convenience and in attracting foreign-owned ships to the Norwegian and Danish flags.

A merchant ship is a vessel that carries goods against payment of freight; it is commonly used to denote any nonmilitary ship but accurately restricted to commercial vessels only.

A register is the record of a ship's ownership and nationality as listed with the maritime authorities of a country; also, it is the compendium of such individual ships' registrations. Registration of a ship provides it with a nationality and makes it subject to the laws of the country in which registered (the flag state) regardless of the nationality of the ship's ultimate owner.

Military: This category includes the entries dealing with a country's military structure, manpower, and expenditures.

Notes and Definitions (continued)

Location: This entry identifies the country's regional location, neighboring countries, and adjacent bodies of water.

Map references: This entry includes the name of the *Factbook* reference map on which a country may be found. The entry on **Geographic coordinates** may be helpful in finding some smaller countries.

Maritime claims: This entry includes the following claims, the definitions of which are excerpted from the Law of the Sea (LOS) Convention, which alone contains the full and definitive descriptions:

contiguous zone - according to the LOS Convention (Article 33), this is a zone contiguous to a coastal State's territorial sea, over which it may exercise the control necessary to: prevent infringement of its customs, fiscal, immigration, or sanitary laws and regulations within its territory or territorial sea; punish infringement of the above laws and regulations committed within its territory or territorial sea; the contiguous zone may not extend beyond 24 nautical miles from the baselines from which the breadth of the territorial sea is measured (e.g. the US has claimed a 12-mile contiguous zone in addition to its 12-mile territorial sea)

continental shelf - the LOS Convention (Article 76) defines the continental shelf of a coastal State as comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nautical miles from the baselines from which the breadth of the territorial sea is measured where the outer edge of the continental margin does not extend up to that distance; the continental margin comprises the submerged prolongation of the landmass of the coastal State, and consists of the seabed and subsoil of the shelf, the slope and the rise; it does not include the deep ocean floor with its oceanic ridges or the subsoil thereof

exclusive economic zone (EEZ) the LOS Convention (Part V) defines the EEZ as a zone beyond and adjacent to the territorial sea in which a coastal State has: sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the seabed and of the seabed and its subsoil, and with regard to other activities for the economic exploitation and exploration of the zone, such as the production of energy from the water, currents, and winds; jurisdiction with regard to the establishment and use of artificial islands, installations, and structures; marine scientific research; the protection and preservation of the marine environment; the outer limit of the exclusive economic zone shall not exceed 200 nautical miles from the baselines from which the breadth of the territorial sea is measured

exclusive fishing zone - while this term is not used in the LOS Convention, some States (e.g. the United Kingdom) have chosen not to claim an EEZ, but rather to claim jurisdiction over the living resources off their coast; in such cases, the term exclusive fishing zone is often used

territorial sea - the sovereignty of a coastal State extends beyond its land territory and internal waters to an adjacent belt of sea, described as the territorial sea in the LOS Convention (Part II); this sovereignty extends to the air space over the territorial sea as well as its underlying seabed and subsoil; every State has the right to establish the breadth of its territorial sea up to a limit not exceeding 12 nautical miles

Merchant marine: Merchant marine may be defined as all ships engaged in the carriage of goods; or all commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc.; or a grouping of merchant ships by nationality or register. Afghanistan

Introduction

Background: Afghanistan's recent history is characterized by war and civil strife, with intermittent periods of relative calm and stability. The Soviet Union invaded in 1979 but was forced to withdraw 10 years later by anti-Communist mujahidin forces supplied and trained by the US, Saudi Arabia, Pakistan, and others. Fighting subsequently continued among the various mujahidin factions, giving rise to a state of warlordism that spawned the Taliban in the early 1990s. The Taliban was able to seize most of the country, aside from Northern Alliance strongholds primarily in the northeast, until US and allied military action in support of the opposition following the 11 September 2001 terrorist attacks forced the group's downfall. The four largest Afghan opposition groups met in Bonn, Germany, in late 2001 and agreed on a plan for the formulation of a new government structure that resulted in the inauguration of Hamid KARZAI as Chairman of the Afghan Interim Authority (AIA) on 22 December 2001. In addition to occasionally violent political jockeying and ongoing military action to root out remaining terrorists and Taliban elements, the country suffers from enormous poverty, a crumbling infrastructure, and widespread land mines.

Geography

Location: Southern Asia, north and west of Pakistan, east of Iran

Country name:

conventional long form: Islamic State of Afghanistan

conventional short form: Afghanistan

local long form: Dowlat-e Eslami-ye Afghanistan

local short form: Afghanistan

former: Republic of Afghanistan

Government type: transitional

Capital: Kabul

Administrative divisions: 32 provinces (velayat, singular - velayat); Badakhshan, Badghis, Baghlan, Balkh, Bamian, Farah, Faryab, Ghazni, Ghowr, Helmand, Herat, Jowzjan, Kabul, Kandahar, Kapisa, Konar, Kondozi, Laghman, Lowgar, Nangarhar, Nimruz, Oruzgan, Paktia, Paktika, Parwan, Samangan, Sar-e Pol, Takhar, Vardak, Zabol, Nurestan, and Khowst

Independence: 19 August 1919 (from UK control over Afghan foreign affairs)

National holiday: Independence Day, 19 August (1919)

Constitution: the Bonn Agreement calls for a Constitutional Loya Jirga (Grand Council) to be convened within 18 months of the establishment of the Transitional Authority to draft a new constitution for

Afghanistan (continued)

the country; the basis for the next constitution is the 1963/64 Constitution, according to the Bonn Agreement

Legal system: the Bonn Agreement calls for a judicial commission to rebuild the justice system in accordance with Islamic principles, international standards, the rule of law, and Afghan legal traditions

Suffrage: NA; previously males 15-50 years of age

Executive branch: note: following the Taliban's refusal to hand over Usama bin LADIN to the US for his suspected involvement in the 11 September 2001 terrorist attacks in the US, a US-led international coalition was formed; after several weeks of aerial bombardment by coalition forces and military action on the ground, including Afghan opposition forces, the Taliban was ousted from power on 17 November 2001; in December 2001 a number of prominent Afghans met under UN auspices in Bonn, Germany, to decide on a plan for governing the country; as a result, the Afghan Interim Authority (AIA) - made up of 30 members, headed by a chairman and five deputy chairmen - was inaugurated on 22 December 2001 with about a six-month mandate to be followed by a two-year Transitional Authority (TA) after which elections are to be held; the structure of the follow-on TA will be announced on 10 June 2002 when the Loya Jirga (grand assembly) is convened
chief of state: Chairman of the AIA, Hamad KARZAI (since 22 December 2001); note - presently the chairman is both chief of state and head of government

head of government: Chairman of the AIA, Hamad KARZAI (since 22 December 2001); note - presently the chairman is both chief of state and head of government

cabinet: the 30-member AIA

elections: NA

Legislative branch: nonfunctioning as of June 1993

Judicial branch: the Bonn Agreement calls for the establishment of a Supreme Court

Political parties and leaders: NA; note - political parties in Afghanistan are in flux and many prominent players have plans to create new parties; the three main groups represented in the Afghan Interim Authority (AIA) are: the Northern Alliance (also known as the United Islamic Front for the Salvation of Afghanistan) - the main opposition to the Taliban - composed of different ethnic and political groups; the Rome Group, associated with the former king of Afghanistan, composed mainly of expatriate Afghans; and the Peshawar Group, another expatriate group; there are also several "independent" groups

Political pressure groups and leaders: NA; note - ministries formed under the Afghan Interim Authority (AIA) include former pressure group leaders

International organization participation: AsDB, CP, ECO, ESCAP, FAO, G-77, IAEA, IBRD, ICAO, ICRM, IDA, IDB, IFAD, IFC, IFRCS, ILO, IMF, IOC (suspended), IOM (observer), ITU, NAM, OIC, OPCW (signatory), UN, UNCTAD, UNESCO, UNIDO, UPU, WFTU, WHO, WMO, WTO

Diplomatic representation in the US:

chief of mission: ambassador Ishaq SHAHRYAR (as of 19 June 2002)

chancery: 2341 Wyoming Avenue, N.W., Washington, DC 20008

telephone: 202-483-6410

FAX: 202-483-6487

consulate(s) general: New York

Economy

Economy - overview: Afghanistan is an extremely poor, landlocked country, highly dependent on farming and livestock raising (sheep and goats). Economic considerations have played second fiddle to political and military upheavals during two decades of war, including the nearly 10-year Soviet military occupation (which ended 15 February 1989). During that conflict one-third of the population fled the country, with Pakistan and Iran sheltering a combined peak of more than 6 million refugees. Gross domestic product has fallen substantially over the past 20 years because of the loss of labor and capital and the disruption of trade and transport; severe drought added to the nation's difficulties in 1998-2001. The majority of the population continues to suffer from insufficient food, clothing, housing, and medical care, problems exacerbated by military operations and political uncertainties. Inflation remains a serious problem. Following the US-led coalition war that led to the defeat of the Taliban in November 2001 and the formulation of the Afghan Interim Authority (AIA) resulting from the December 2001 Bonn Agreement, International efforts to rebuild Afghanistan were addressed at the Tokyo Donors Conference for Afghan Reconstruction in January 2002, when \$4.5 billion was collected for a trust fund to be administered by the World Bank. Priority areas for reconstruction include the construction of education, health, and sanitation facilities, enhancement of administrative capacity, the development of the agricultural sector, and the rebuilding of road, energy, and telecommunication links.

Transnational Issues

Disputes - international: close ties with Pashtuns in Pakistan make long border difficult to control

Illicit drugs: poppy ban cut 2001 cultivation by 97% to 1,695 hectares, with potential production of 74 tons of opium; a major source of hashish; many heroin-processing laboratories throughout the country; major political factions in the country profit from the drug trade

Albania

Introduction

Background: In 1990 Albania ended 44 years of xenophobic communist rule and established a multiparty democracy. The transition has proven difficult as corrupt governments have tried to deal with high unemployment, a dilapidated infrastructure, widespread gangsterism, and disruptive political opponents. International observers judged local elections in 2001 to be acceptable and a step toward democratic development, but identified serious deficiencies which should be addressed through reforms in the Albanian electoral code.

Economy

Economy - overview: Poor and backward by European standards. Albania is making the difficult transition to a more modern open-market economy. The government has taken measures to curb violent crime and to revive economic activity and trade. The economy is bolstered by remittances from abroad of \$400-\$600 million annually, mostly from Greece and Italy. Agriculture, which accounts for 52% of GDP, is

Albania (continued)

held back because of frequent drought and the need to modernize equipment and consolidate small plots of land. Severe energy shortages are forcing small firms out of business, increasing unemployment, scaring off foreign investors, and spurring inflation. **GDP**: purchasing power parity - \$13.2 billion (2001 est.)

Transnational Issues

Disputes - international: the Albanian Government supports protection of the rights of ethnic Albanians outside of its borders in the Kosovo region of Yugoslavia and in the Former Yugoslav Republic of Macedonia while continuing to seek regional cooperation; many Albanians illegally transit neighboring states to emigrate to western Europe
Illicit drugs: increasingly active transshipment point for Southwest Asian opiates, hashish, and cannabis transiting the Balkan route and - to a far lesser extent - cocaine from South America destined for Western Europe; limited opium and growing cannabis production; ethnic Albanian narcotrafficking organizations active and rapidly expanding in Europe

Algeria

Introduction

Background: After a century of rule by France, Algeria became independent in 1962. The surprising first round success of the fundamentalist FIS (Islamic Salvation Front) party in the December 1991 balloting caused the army to intervene, crack down on the FIS, and postpone the subsequent elections. The FIS response has resulted in a continuous low-grade civil conflict with the secular state apparatus, which nonetheless has allowed elections featuring pro-government and moderate religious-based parties. FIS's armed wing, the Islamic Salvation Army, disbanded itself in January 2000 and many armed militants surrendered under an amnesty program designed to promote national reconciliation. Nevertheless, residual fighting continues. Other concerns include Berber unrest, large-scale unemployment, a shortage of housing, and the need to diversify the petroleum-based economy.

Economy

Economy - overview: The hydrocarbons sector is the backbone of the economy, accounting for roughly 60% of budget revenues, 30% of GDP, and over 95% of export earnings. Algeria has the fifth-largest reserves of natural gas in the world and is the second largest gas exporter; it ranks 14th in oil reserves. Algeria's financial and economic indicators improved during the mid-1990s, in part because of policy reforms supported by the IMF and debt rescheduling from the Paris Club. Algeria's finances in 2000 and 2001 benefited from the temporary spike in oil prices and the government's tight fiscal policy, leading to a large increase in the trade surplus, record highs in foreign exchange reserves, and reduction in foreign debt. The government's continued efforts to diversify the economy by attracting foreign and domestic investment outside the energy sector has had little success in reducing high unemployment and improving living standards. In 2001, the government signed an Association Treaty with the European Union that will eventually lower tariffs and increase trade.

American Samoa (territory of the US)

Introduction

Background: Settled as early as 1000 B. C., Samoa was "discovered" by European explorers in the 18th century. International rivalries in the latter half of the 19th century were settled by an 1899 treaty in which Germany and the US divided the Samoan archipelago. The US formally occupied its portion - a smaller group of eastern islands with the excellent harbor of Pago Pago - the following year.

Geography

Economy

Economy - overview: This is a traditional Polynesian economy in which more than 90% of the land is communally owned. Economic activity is strongly linked to the US, with which American Samoa conducts most of its foreign trade. Tuna fishing and tuna processing plants are the backbone of the private sector, with canned tuna the primary export. Transfers from the US Government add substantially to American Samoa's economic well-being. Attempts by the government to develop a larger and broader economy are restrained by Samoa's remote location, its limited transportation, and its devastating hurricanes. Tourism, a developing sector, has been held back by the recurring financial difficulties in East Asia.

Economy

Economy - overview: Tourism, the mainstay of Andorra's tiny, well-to-do economy, accounts for roughly 80% of GDP. An estimated 9 million tourists visit annually, attracted by Andorra's duty-free status and by its summer and winter resorts. Andorra's comparative advantage has recently eroded as the economies of neighboring France and Spain have been opened up, providing broader availability of goods and lower tariffs. The banking sector, with its "tax haven" status, also contributes substantially to the economy. Agricultural production is limited - only 2% of the land is arable - and most food has to be imported. The principal livestock activity is sheep raising. Manufacturing output consists mainly of cigarettes, cigars, and furniture. Andorra is a member of the EU Customs Union and is treated as an EU member for trade in manufactured goods (no tariffs) and as a non-EU member for agricultural products.

Angola

Introduction

Background: Civil war has been the norm in Angola since independence from Portugal in 1975. A 1994 peace accord between the government and the National Union for the Total Independence of Angola (UNITA) provided for the integration of former UNITA insurgents into the government and armed forces. A national unity government was installed in April of 1997, but serious fighting resumed in late 1998, rendering hundreds of thousands of people homeless. Up to 1.5 million lives may have been lost in fighting over the past quarter century. The death of Jonas SAVIMBI and a cease fire with UNITA may bode well for the country.

Geography

Location: Southern Africa, bordering the South Atlantic Ocean, between Namibia and Democratic Republic of the Congo

Economy

Economy - overview: Angola is an economy in disarray because of a quarter century of nearly continuous warfare. Subsistence agriculture provides the main livelihood for 85% of the population. Oil production and the supporting activities are vital to the economy, contributing about 45% to GDP and 90% of exports. Violence continues, millions of land mines remain, and many farmers are reluctant to return to their fields. As a result, much of the country's food must still be imported. To fully take advantage of its rich natural resources - gold, diamonds, extensive forests, Atlantic fisheries, and large oil deposits - Angola will need to end its conflict and continue reforming government policies. Internal strife discourages investment outside of the petroleum sector, which is producing roughly 800,000 barrels of oil per day. While Angola made progress in bringing inflation down further, from over 300% in 2000 to about 110% in 2001, the government has failed to make sufficient progress on reforms recommended by the IMF, such as increasing foreign exchange reserves and promoting greater transparency in government spending. Angola's GDP could be among the world's fastest growing in 2002 if oil production from the Girassol field, which began production in December 2001, reaches 200,000 barrels per day as expected.

Anguilla (overseas territory of the UK)

Introduction

Background: Colonized by English settlers from Saint Kitts in 1650, Anguilla was administered by Great Britain until the early 19th century, when the island - against the wishes of the inhabitants - was incorporated into a single British dependency along with Saint Kitts and Nevis. Several attempts at separation failed. In 1971, two years after a revolt, Anguilla was finally allowed to secede; this arrangement was formally recognized in 1980 with Anguilla becoming a separate British dependency.

Economy

Economy - overview: Anguilla has few natural resources, and the economy depends heavily on luxury tourism, offshore banking, lobster fishing, and remittances from emigrants. Increased activity in the tourism industry, which has spurred the growth of the construction sector, has contributed to economic growth. Anguillian officials have put substantial effort into developing the offshore financial sector, which is small, but growing. In the medium term, prospects for the economy will depend largely on the tourism sector

Antarctica

Introduction

Background: Speculation over the existence of a "southern land" was not confirmed until the early 1820s when British and American commercial operators and British and Russian national expeditions began exploring the Antarctic Peninsula region and other areas south of the Antarctic Circle. Not until 1840 was it established that Antarctica was indeed a continent and not just a group of islands. Several exploration "firsts" were achieved in the early 20th century. Following World War II, there was an upsurge in scientific research on the continent. A number of countries have set up year-round research stations on Antarctica. Seven have made territorial claims, but no other country recognizes these claims. In order to form a legal framework for the activities of nations on the continent, an Antarctic Treaty was negotiated that neither denies nor gives recognition to existing territorial claims; signed in 1959, it entered into force in 1961.

Geography

Location: continent mostly south of the Antarctic Circle

Geographic coordinates: 90 00 S, 0 00 E

Map references: Antarctic Region

Area:

total: 14 million sq km

land: 14 million sq km (280,000 sq km ice-free, 13.72 million sq km ice-covered) (est.)

note: fifth-largest continent, following Asia, Africa, North America, and South America, but larger than Australia and the subcontinent of Europe

Area - comparative: slightly less than 1.5 times the size of the US

Land boundaries: 0 km

note: see entry on International disputes

Coastline: 17,968 km

Maritime claims: none; 20 of 27 Antarctic consultative nations have made no claims to Antarctic

Antarctica (continued)

territory (although Russia and the US have reserved the right to do so) and do not recognize the claims of the other nations; also see the Disputes - international entry

Climate: severe low temperatures vary with latitude, elevation, and distance from the ocean; East Antarctica is colder than West Antarctica because of its higher elevation; Antarctic Peninsula has the most moderate climate; higher temperatures occur in January along the coast and average slightly below freezing

Terrain: about 98% thick continental ice sheet and 2% barren rock, with average elevations between 2,000 and 4,000 meters; mountain ranges up to nearly 5,000 meters; ice-free coastal areas include parts of southern Victoria Land, Wilkes Land, the Antarctic Peninsula area, and parts of Ross Island on McMurdo Sound; glaciers form ice shelves along about half of the coastline, and floating ice shelves constitute 11% of the area of the continent

Elevation extremes:

lowest point: Bentley Subglacial Trench -2,555 m

highest point: Vinson Massif 4,897 m

note: the lowest known land point in Antarctica is hidden in the Bentley Subglacial Trench; at its surface is the deepest ice yet discovered and the world's lowest elevation not under seawater

Natural resources: iron ore, chromium, copper, gold, nickel, platinum and other minerals, and coal and hydrocarbons have been found in small uncommercial quantities; none presently exploited; krill, finfish, and crab have been taken by commercial fisheries

Land use:

arable land: 0%

permanent crops: 0%

other: 100% (ice 98%, barren rock 2%) (1998 est.)

Irrigated land: 0 sq km (1998 est.)

Natural hazards: katabatic (gravity-driven) winds blow coastward from the high interior; frequent blizzards form near the foot of the plateau; cyclonic storms form over the ocean and move clockwise along the coast; volcanism on Deception Island and isolated areas of West Antarctica; other seismic activity rare and weak; large icebergs may calve from ice shelf

Environment - current issues: in 1998, NASA satellite data showed that the antarctic ozone hole was the largest on record, covering 27 million square kilometers; researchers in 1997 found that increased ultraviolet light coming through the hole damages the DNA of icefish, an antarctic fish lacking hemoglobin; ozone depletion earlier was shown to harm one-celled antarctic marine plants; in 2002, significant areas of ice shelves disintegrated in response to regional warming

Geography - note: the coldest, windiest, highest (on average), and driest continent; during summer, more solar radiation reaches the surface at the South Pole than is received at the Equator in an equivalent period; mostly uninhabitable

People

Population: no indigenous inhabitants, but there are seasonally staffed research stations

note: approximately 27 nations, all signatory to the Antarctic Treaty, send personnel to perform seasonal (summer) and year-round research on the continent and in its surrounding oceans; the population of persons doing and supporting science on the continent and its nearby islands south of 60 degrees south latitude (the region covered by the Antarctic Treaty) varies from approximately 4,000 in summer to 1,000 in winter; in addition, approximately 1,000 personnel including ship's crew and scientists doing onboard research are present in the waters of the treaty region; summer (January) population - 3,687 total; Argentina 302, Australia 201, Belgium 13, Brazil 80, Bulgaria 16, Chile 352, China 70, Finland 11, France 100, Germany 51, India 60, Italy 106, Japan 136, South Korea 14, Netherlands 10, NZ 60, Norway 40, Peru 28, Poland 70, Russia 254, South Africa 80, Spain 43, Sweden 20, UK 192, US 1,378 (1998-99); winter (July) population - 964 total; Argentina 165, Australia 75, Brazil 12, Chile 129, China 33, France 33, Germany 9, India 25, Japan 40, South Korea 14, NZ 10, Poland 20, Russia 102, South Africa 10, UK 39, US 248 (1998-99); year-round stations - 42 total; Argentina 6, Australia 4, Brazil 1, Chile 4, China 2, Finland 1, France 1, Germany 1, India 1, Italy 1, Japan 1, South Korea 1, NZ 1, Norway 1, Poland 1, Russia 6, South Africa 1, Spain 1, Ukraine 1, UK 2, US 3, Uruguay 1 (1998-99); summer-only stations - 32 total; Argentina 3, Australia 4, Bulgaria 1, Chile 7, Germany 1, India 1, Japan 3, NZ 1, Peru 1, Russia 3, Sweden 2, UK 5 (1998-99); in addition, during the austral summer some nations have numerous occupied locations such as tent camps, summer-long temporary facilities, and mobile traverses in support of research (July 2002 est.)

Government type: Antarctic Treaty Summary - the Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, establishes the legal framework for the management of Antarctica. The 24th Antarctic Treaty Consultative Meeting was held in Russia in July 2001. At the end of 2001, there were 45 treaty member nations: 27 consultative and 18 non-consultative. Consultative (voting) members include the seven nations that claim portions of Antarctica as national territory (some claims overlap) and 20 nonclaimant nations. The US and Russia have reserved the right to make claims. The US does not recognize the claims of others. Antarctica is administered through meetings of the consultative member nations. Decisions from these meetings are carried out by these member nations (within their

areas) in accordance with their own national laws. The year in parentheses indicates when an acceding nation was voted to full consultative (voting) status, while no date indicates the country was an original 1959 treaty signatory. Claimant nations are - Argentina, Australia, Chile, France, New Zealand, Norway, and the UK. Nonclaimant consultative nations are - Belgium, Brazil (1983), Bulgaria (1998), China (1985), Ecuador (1990), Finland (1989), Germany (1981), India (1983), Italy (1987), Japan, South Korea (1989), Netherlands (1990), Peru (1989), Poland (1977), Russia, South Africa, Spain (1988), Sweden (1988), Uruguay (1985), and the US.

Non-consultative (nonvoting) members, with year of accession in parentheses, are - Austria (1987), Canada (1988), Colombia (1989), Cuba (1984), Czech Republic (1993), Denmark (1965), Estonia (2001), Greece (1987), Guatemala (1991), Hungary (1984), North Korea (1987), Papua New Guinea (1981), Romania (1971), Slovakia (1993), Switzerland (1990), Turkey (1995), Ukraine (1992), and Venezuela (1999). Article 1 - area to be used for peaceful purposes only; military activity, such as weapons testing, is prohibited, but military personnel and equipment may be used for scientific research or any other peaceful purpose; Article 2 - freedom of scientific investigation and cooperation shall continue; Article 3 - free exchange of information and personnel, cooperation with the UN and other international agencies; Article 4 - does not recognize, dispute, or establish territorial claims and no new claims shall be asserted while the treaty is in force; Article 5 - prohibits nuclear explosions or disposal of radioactive wastes; Article 6 - includes under the treaty all land and ice shelves south of 60 degrees 00 minutes south and reserves high seas rights; Article 7 - treaty-state observers have free access, including aerial observation, to any area and may inspect all stations, installations, and equipment; advance notice of all expeditions and of the introduction of military personnel must be given; Article 8 - allows for jurisdiction over observers and scientists by their own states; Article 9 - frequent consultative meetings take place among member nations; Article 10 - treaty states will discourage activities by any country in Antarctica that are contrary to the treaty; Article 11 - disputes to be settled peacefully by the parties concerned or, ultimately, by the ICJ; Articles 12, 13, 14 - deal with upholding, interpreting, and amending the treaty among involved nations. Other agreements - some 200 recommendations adopted at treaty consultative meetings and ratified by governments include - Agreed Measures for Fauna and Flora (1964) which were later incorporated into the Environmental Protocol; Convention for the Conservation of Antarctic Seals (1972); Convention on the Conservation of Antarctic Marine Living Resources (1980); a mineral resources agreement was signed in 1988 but remains unratified; the Protocol on Environmental Protection to the Antarctic

Antarctica (continued)

Treaty was signed 4 October 1991 and entered into force 14 January 1998; this agreement provides for the protection of the Antarctic environment through five specific annexes: 1) marine pollution, 2) fauna and flora, 3) environmental impact assessments, 4) waste management, and 5) protected area management; it prohibits all activities relating to mineral resources except scientific research.

Legal system: Antarctica is administered through meetings of the consultative member nations. Decisions from these meetings are carried out by these member nations (within their areas) in accordance with their own national laws. US law, including certain criminal offenses by or against US nationals, such as murder, may apply extra-territorially. Some US laws directly apply to Antarctica. For example, the Antarctic Conservation Act, 16 U.S.C. section 2401 et seq., provides civil and criminal penalties for the following activities, unless authorized by regulation of statute: the taking of native mammals or birds; the introduction of nonindigenous plants and animals; entry into specially protected areas; the discharge or disposal of pollutants; and the importation into the US of certain items from Antarctica. Violation of the Antarctic Conservation Act carries penalties of up to \$10,000 in fines and one year in prison. The National Science Foundation and Department of Justice share enforcement responsibilities. Public Law 95-541, the US Antarctic Conservation Act of 1978, as amended in 1996, requires expeditions from the US to Antarctica to notify, in advance, the Office of Oceans and Polar Affairs, Room 5801, Department of State, Washington, DC 20520, which reports such plans to other nations as required by the Antarctic Treaty. For more information, contact Permit Office, Office of Polar Programs, National Science Foundation, Arlington, Virginia 22230; telephone: (703) 292-8030, or visit their website at www.nsf.gov.

Economy

Economy - overview: Fishing off the coast and tourism, both based abroad, account for the limited economic activity. Antarctic fisheries in 2000-01 (1 July-30 June) reported landing 112,934 metric tons. Unregulated fishing probably landed more fish than the regulated fishery, and allegedly illegal fishing in antarctic waters in 1998 resulted in the seizure (by France and Australia) of at least eight fishing ships. The Convention on the Conservation of Antarctic Marine Living Resources determines the recommended catch limits for marine species. A total of 12,248 tourists visited in the 2000-01 antarctic summer, down from the 14,762 who visited the previous year. Nearly all of them were passengers on 21 commercial (nongovernmental) ships and several yachts that made trips during the summer. Most tourist trips lasted approximately two weeks.

Transportation

Ports and harbors: there are no developed ports and harbors in Antarctica: most coastal stations have offshore anchorages, and supplies are transferred from ship to shore by small boats, barges, and helicopters; a few stations have a basic wharf facility; US coastal stations include McMurdo (77 51 S, 166 40 E), Palmer (64 43 S, 64 03 W); government use only except by permit (see Permit Office under "Legal System"); all ships at port are subject to inspection in accordance with Article 7, Antarctic Treaty; offshore anchorage is sparse and intermittent

Airports: 30 (2001)

note: 27 stations, operated by 16 national governments party to the Antarctic Treaty, have aircraft landing facilities for either helicopters and/or fixed-wing aircraft; commercial enterprises operate two additional aircraft landing facilities; helicopter pads are available at 27 stations; runways at 15 locations are gravel, sea-ice, blue-ice, or compacted snow suitable for landing wheeled, fixed-wing aircraft; of these, 1 is greater than 3 km in length, 6 are between 2 km and 3 km in length, 3 are between 1 km and 2 km in length, 3 are less than 1 km in length, and 2 are of unknown length; snow surface skiways, limited to use by ski-equipped, fixed-wing aircraft, are available at another 15 locations; of these, 4 are greater than 3 km in length, 3 are between 2 km and 3 km in length, 2 are between 1 km and 2 km in length, 2 are less than 1 km in length, and 4 are of unknown length; aircraft landing facilities generally subject to severe restrictions and limitations resulting from extreme seasonal and geographic conditions; aircraft landing facilities do not meet ICAO standards; advance approval from the respective governmental or nongovernmental operating organization required for landing; landed aircraft are subject to inspection in accordance with Article 7, Antarctic Treaty

Military

Military - note: the Antarctic Treaty prohibits any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, or the testing of any type of weapon; it permits the use of military personnel or equipment for scientific research or for any other peaceful purposes

Transnational Issues

Disputes - international: Antarctic Treaty freezes claims (see Antarctic Treaty Summary in Government type entry); sections (some overlapping) claimed by Argentina, Australia, Chile, France, NZ, Norway, and UK; the US and most other states do not recognize the territorial claims of other states and have made no claims themselves (the US and Russia reserve the right to do so); no claims have been made in the sector between 90 degrees west and 150 degrees west; several states with land claims in Antarctica have expressed their intention to submit data to the UN Commission on the Limits of the Continental Shelf to extend their continental shelf claims to adjoining undersea ridges

Antigua and Barbuda

Introduction

Background: The islands of Antigua and Barbuda became an independent state within the British Commonwealth of Nations in 1981. Some 3,000 refugees fleeing a volcanic eruption on nearby Montserrat have settled in Antigua and Barbuda since 1995.

Economy

Economy - overview: Tourism continues to dominate the economy, accounting for more than half of GDP. Weak tourist arrival numbers since early 2000 have slowed the economy, however, and pressed the government into a tight fiscal corner. The dual-island nation's agricultural production is focused on the domestic market and constrained by a limited water supply and a labor shortage stemming from the lure of higher wages in tourism and construction work. Manufacturing comprises enclave-type assembly for export with major products being bedding, handicrafts, and electronic components. Prospects for economic growth in the medium term will continue to depend on income growth in the industrialized world, especially in the US, which accounts for about one-third of all tourist arrivals.

Illicit drugs: considered a minor transshipment point for narcotics bound for the US and Europe; more significant as a drug-money-laundering center

Arctic Ocean

Introduction

Background: The Arctic Ocean is the smallest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, Indian Ocean, and the recently delimited Southern Ocean). The Northwest Passage (US and Canada) and Northern Sea Route (Norway and Russia) are two important seasonal waterways. A sparse network of air, ocean, river, and land routes circumscribes the Arctic Ocean.

Geography

Location: body of water between Europe, Asia, and North America, mostly north of the Arctic Circle

Geographic coordinates: 90 00 N, 0 00 E

Map references: Arctic Region

Area:

total: 14.056 million sq km

note: includes Baffin Bay, Barents Sea, Beaufort Sea, Chukchi Sea, East Siberian Sea, Greenland Sea, Hudson Bay, Hudson Strait, Kara Sea, Laptev Sea, Northwest Passage, and other tributary water bodies

Area - comparative: slightly less than 1.5 times the size of the US

Coastline: 45,389 km

Climate: polar climate characterized by persistent cold and relatively narrow annual temperature ranges; winters characterized by continuous darkness, cold and stable weather conditions, and clear skies; summers characterized by continuous daylight, damp and foggy weather, and weak cyclones with rain or snow

Terrain: central surface covered by a perennial drifting polar icepack that averages about 3 meters in thickness, although pressure ridges may be three times that size; clockwise drift pattern in the Beaufort Gyral Stream, but nearly straight-line movement from the New Siberian Islands (Russia) to Denmark Strait (between Greenland and Iceland); the icepack is surrounded by open seas during the summer, but more than doubles in size during the winter and

extends to the encircling landmasses; the ocean floor is about 50% continental shelf (highest percentage of any ocean) with the remainder a central basin interrupted by three submarine ridges (Alpha Cordillera, Nansen Cordillera, and Lomonosov Ridge)

Elevation extremes:

lowest point: Fram Basin -4,665 m

highest point: sea level 0 m

Natural resources: sand and gravel aggregates, placer deposits, polymetallic nodules, oil and gas fields, fish, marine mammals (seals and whales)

Natural hazards: ice islands occasionally break away from northern Ellesmere Island; icebergs calved from glaciers in western Greenland and extreme northeastern Canada; permafrost in islands; virtually ice locked from October to June; ships subject to superstructure icing from October to May

Environment - current issues: endangered marine species include walrus and whales; fragile ecosystem slow to change and slow to recover from disruptions or damage; thinning polar icepack

Geography - note: major chokepoint is the southern Chukchi Sea (northern access to the Pacific Ocean via the Bering Strait); strategic location between North America and Russia; shortest marine link between the extremes of eastern and western Russia; floating research stations operated by the US and Russia; maximum snow cover in March or April about 20 to 50 centimeters over the frozen ocean; snow cover lasts about 10 months

Economy

Economy - overview: Economic activity is limited to the exploitation of natural resources, including petroleum, natural gas, fish, and seals.

Transportation

Ports and harbors: Churchill (Canada), Murmansk (Russia), Prudhoe Bay (US)

Transportation - note: sparse network of air, ocean, river, and land routes; the Northwest Passage (North America) and Northern Sea Route (Eurasia) are important seasonal waterways

Transnational Issues

Disputes - international: some maritime disputes (see littoral states); Russia is the first state to submit data to the UN Commission on the Limits of the Continental Shelf to extend its continental shelf by claiming two undersea ridges in the Arctic Ocean

Argentina

Introduction

Background: Following independence from Spain in 1816, Argentina experienced periods of internal political conflict between conservatives and liberals and between civilian and military factions. After World War II, a long period of Peronist authoritarian rule and interference in subsequent governments was followed by a military junta that took power in 1976. Democracy returned in 1983, and numerous elections since then have underscored Argentina's progress in democratic consolidation.

Geography

Location: Southern South America, bordering the South Atlantic Ocean, between Chile and Uruguay

Geographic coordinates: 34 00 S, 64 00 W

Climate: mostly temperate; arid in southeast; subantarctic in southwest

Terrain: rich plains of the Pampas in northern half, flat to rolling plateau of Patagonia in south, rugged Andes along western border

Elevation extremes:

lowest point: Salinas Chicas -40 m (located on Peninsula Valdes)

highest point: Cerro Aconcagua 6,960 m

Natural resources: fertile plains of the Pampas, lead, zinc, tin, copper, iron ore, manganese, petroleum, uranium

Land use:

arable land: 9%

permanent crops: 1%

other: 90% (1998 est.)

Irrigated land: 15,610 sq km (1998 est.)

Natural hazards: San Miguel de Tucuman and Mendoza areas in the Andes subject to earthquakes; pamperos are violent windstorms that can strike the Pampas and northeast; heavy flooding

Environment - current issues: environmental problems (urban and rural) typical of an industrializing economy such as deforestation, soil degradation, desertification, air pollution, and water pollution
note: Argentina is a world leader in setting voluntary greenhouse gas targets

Environment - international agreements:

party to: Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Wetlands, Whaling

signed, but not ratified: Marine Life Conservation

Geography - note: second-largest country in South America (after Brazil); strategic location relative to sea lanes between the South Atlantic and the South Pacific Oceans (Strait of Magellan, Beagle Channel, Drake Passage); Cerro Aconcagua is South America's tallest mountain, while the Valdes Peninsula is the lowest point on the continent

Economy

Economy - overview: Argentina benefits from rich natural resources, a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. However, when President Carlos MENEM took office in 1989, the country had piled up huge external debts, inflation had reached 200% per month, and output was plummeting. To combat the economic crisis, the government embarked on a path of trade liberalization, deregulation, and privatization.

In 1991, it implemented radical monetary reforms which pegged the peso to the US dollar and limited the growth in the monetary base by law to the growth in reserves. Inflation fell sharply in subsequent years. In 1995, the Mexican peso crisis produced capital flight, the loss of banking system deposits, and a severe, but short-lived, recession; a series of reforms to bolster the domestic banking system followed. Real GDP growth recovered strongly, reaching 8% in 1997. In 1998, international financial turmoil caused by Russia's problems and increasing investor anxiety over Brazil produced the highest domestic interest rates in more than three years, halving the growth rate of the economy. Conditions worsened in 1999 with GDP falling by 3%. President Fernando DE LA RUA, who took office in December 1999, sponsored tax increases and spending cuts to reduce the deficit, which had ballooned to 2.5% of GDP in 1999. Growth in 2000 was a negative 0.5%, as both domestic and foreign investors remained skeptical of the government's ability to pay debts and maintain the peso's fixed exchange rate with the US dollar. The economic situation worsened still further in 2001 with the widening of spreads on Argentine bonds, massive withdrawals from the banks, and a further decline in consumer and investor confidence. Government efforts to achieve a "zero deficit", to stabilize the banking system, and to restore economic growth proved inadequate in the face of the mounting economic problems. At the start of 2002, newly elected president Eduardo DUHALDE met with IMF officials to secure an additional \$20 billion loan, but immediate action seemed unlikely. The peso's peg to the dollar was abandoned in January 2002, and the peso was floated from the dollar in February; inflation picked up rapidly.

Communications

Telephones - main lines in use: 7.5 million (1998)

Telephones - mobile cellular: 3 million (December 1999)

Telephone system:

general assessment: by opening the telecommunications market to competition and foreign investment with the "Telecommunications Liberalization Plan of 1998", Argentina encouraged the growth of modern telecommunication technology; fiber-optic cable trunk lines are being installed between all major cities; the major networks are entirely digital and the availability of telephone service is being improved; however, telephone density is presently minimal, and making telephone service universally available will take some time
domestic: microwave radio relay, fiber-optic cable, and a domestic satellite system with 40 earth stations serve the trunk network; more than 110,000 pay telephones are installed and mobile telephone use is rapidly expanding

international: satellite earth stations - 8 Intelsat (Atlantic Ocean); Atlantis II and Unisur submarine cables; two international gateways near Buenos Aires (1999)

Armenia

Introduction

Background: An Armenian Apostolic Christian country, Armenia was incorporated into Russia in 1828 and the USSR in 1920. Armenian leaders remain preoccupied by the long conflict with Azerbaijan over Nagorno-Karabakh, a primarily Armenian-populated region, assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a cease-fire took hold, Armenian forces held not only Nagorno-Karabakh but also a significant portion of Azerbaijan proper. The economies of both sides have been hurt by their inability to make substantial progress toward a peaceful resolution.

Economy

Economy - overview: Under the old Soviet central planning system, Armenia had developed a modern industrial sector, supplying machine tools, textiles, and other manufactured goods to sister republics in exchange for raw materials and energy. Since the implosion of the USSR in December 1991, Armenia has switched to small-scale agriculture away from the large agroindustrial complexes of the Soviet era. The agricultural sector has long-term needs for more investment and updated technology. The privatization of industry has been at a slower pace, but has been given renewed emphasis by the current administration. Armenia is a food importer, and its mineral deposits (gold, bauxite) are small. The ongoing conflict with Azerbaijan over the ethnic Armenian-dominated region of Nagorno-Karabakh and the breakup of the centrally directed economic system of the former Soviet Union contributed to a severe economic decline in the early 1990s. By 1994, however, the Armenian Government had launched an ambitious IMF-sponsored economic program that has resulted in positive growth rates in 1995-2001. Armenia also managed to slash inflation and to privatize most small- and medium-sized enterprises. The chronic energy shortages Armenia suffered in recent years have been largely offset by the energy supplied by one of its nuclear power plants at Metsamor. Armenia's severe trade imbalance has been offset somewhat by international aid, domestic restructuring of the economy, and foreign direct investment.

Aruba

(part of the Kingdom of the Netherlands)

Introduction

Background: Discovered and claimed for Spain in 1499, Aruba was acquired by the Dutch in 1636. The island's economy has been dominated by three main industries. A 19th century gold rush was followed by prosperity brought on by the opening in 1924 of an oil refinery. The last decades of the 20th century saw a boom in the tourism industry. Aruba seceded from the Netherlands Antilles in 1986 and became a separate, autonomous member of the Kingdom of the Netherlands. Movement toward full independence was halted at Aruba's request in 1990.

Economy

Economy - overview: Tourism is the mainstay of the small, open Aruban economy, with offshore banking and oil refining and storage also important. The rapid growth of the tourism sector over the last decade has resulted in a substantial expansion of other activities. Construction has boomed, with hotel capacity five times the 1985 level. In addition, the reopening of the country's oil refinery in 1993, a major source of employment and foreign exchange earnings, has further spurred growth. Aruba's small labor force and low unemployment rate have led to a large number of unfilled job vacancies, despite sharp rises in wage rates in recent years. The government's goal of balancing the budget within two years will hamper expenditures, as will the decline in stopover tourist arrivals following the 11 September terrorist attacks.

Atlantic Ocean

Introduction

Background: The Atlantic Ocean is the second-largest of the world's five oceans (after the Pacific Ocean, but larger than the Indian Ocean, Southern Ocean, and Arctic Ocean). The Kiel Canal (Germany), Oresund (Denmark-Sweden), Bosphorus (Turkey), Strait of Gibraltar (Morocco-Spain), and the St. Lawrence Seaway (Canada-US) are important strategic access waterways. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth world ocean, the Southern Ocean, removed the portion of the Atlantic Ocean south of 60 degrees south.

Natural resources: oil and gas fields, fish, marine mammals (seals and whales), sand and gravel aggregates, placer deposits, polymetallic nodules, precious stones

Natural hazards: icebergs common in Davis Strait, Denmark Strait, and the northwestern Atlantic Ocean from February to August and have been spotted as far south as Bermuda and the Madeira Islands; ships subject to superstructure icing in extreme northern Atlantic from October to May; persistent fog can be a maritime hazard from May to September; hurricanes (May to December)

Environment - current issues: endangered marine species include the manatee, seals, sea lions, turtles, and whales; drift net fishing is hastening the decline of fish stocks and contributing to international disputes; municipal sludge pollution off eastern US, southern Brazil, and eastern Argentina; oil pollution in Caribbean Sea, Gulf of Mexico, Lake Maracaibo, Mediterranean Sea, and North Sea; industrial waste and municipal sewage pollution in Baltic Sea, North Sea, and Mediterranean Sea

Geography - note: major chokepoints include the Dardanelles, Strait of Gibraltar, access to the Panama and Suez Canals; strategic straits include the Strait of Dover, Straits of Florida, Mona Passage, The Sound (Oresund), and Windward Passage; the Equator divides the Atlantic Ocean into the North Atlantic Ocean and South Atlantic Ocean

Economy

Economy - overview: The Atlantic Ocean provides some of the world's most heavily trafficked sea routes, between and within the Eastern and Western Hemispheres. Other economic activity includes the exploitation of natural resources, e.g., fishing, the dredging of aragonite sands (The Bahamas), and production of crude oil and natural gas (Caribbean Sea, Gulf of Mexico, and North Sea).

Transportation

Ports and harbors: Alexandria (Egypt), Algiers (Algeria), Antwerp (Belgium), Barcelona (Spain), Buenos Aires (Argentina), Casablanca (Morocco), Colon (Panama), Copenhagen (Denmark), Dakar (Senegal), Gdansk (Poland), Hamburg (Germany), Helsinki (Finland), Las Palmas (Canary Islands, Spain), Le Havre (France), Lisbon (Portugal), London (UK), Marseille (France), Montevideo (Uruguay), Montreal (Canada), Naples (Italy), New Orleans (US), New York (US), Oran (Algeria), Oslo (Norway), Peiraiefs or Piraeus (Greece), Rio de Janeiro (Brazil), Rotterdam (Netherlands), Saint Petersburg (Russia), Stockholm (Sweden)

Transportation - note: Kiel Canal and Saint Lawrence Seaway are two important waterways; significant domestic commercial and recreational use of Intracoastal Waterway on central and south Atlantic seaboard and Gulf of Mexico coast of US

Transnational Issues

Disputes - international: some maritime disputes (see littoral states)

Australia

Introduction

Background: Australia became a commonwealth of the British Empire in 1901. It was able to take advantage of its natural resources to rapidly develop its agricultural and manufacturing industries and to make a major contribution to the British effort in World Wars I and II. Long-term concerns include pollution, particularly depletion of the ozone layer, and management and conservation of coastal areas, especially the Great Barrier Reef. A referendum to change Australia's status, from a commonwealth headed by the British monarch to an independent republic, was defeated in 1999.

Geography

Location: Oceania, continent between the Indian Ocean and the South Pacific Ocean

Geographic coordinates: 27 00 S, 133 00 E

Map references: Oceania

Area:

total: 7,686,850 sq km

land: 7,617,930 sq km

water: 68,920 sq km

note: includes Lord Howe Island and Macquarie Island

Area - comparative: slightly smaller than the US contiguous 48 states

Land boundaries: 0 km

Coastline: 25,760 km

Maritime claims:

contiguous zone: 24 NM

continental shelf: 200 NM or to the edge of the continental margin

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: generally arid to semiarid; temperate in south and east; tropical in north

Terrain: mostly low plateau with deserts; fertile plain in southeast

Australia (continued)

Elevation extremes:

lowest point: Lake Eyre -15 m

highest point: Mount Kosciuszko 2,229 m

Natural resources: bauxite, coal, iron ore, copper, tin, silver, uranium, nickel, tungsten, mineral sands, lead, zinc, diamonds, natural gas, petroleum

Land use:

arable land: 7%

permanent crops: 0%

other: 93% (1998 est.)

Irrigated land: 24,000 sq km (1998 est.)

Natural hazards: cyclones along the coast; severe droughts; forest fires

Environment - current issues: soil erosion from overgrazing, industrial development, urbanization, and poor farming practices; soil salinity rising due to the use of poor quality water; desertification; clearing for agricultural purposes threatens the natural habitat of many unique animal and plant species; the Great Barrier Reef off the northeast coast, the largest coral reef in the world, is threatened by increased shipping and its popularity as a tourist site; limited natural fresh water resources

Environment - international agreements:

Economy

Economy - overview: Australia has a prosperous Western-style capitalist economy, with a per capita GDP on par with the four dominant West European economies. The Australian economy has been resilient in the face of the global economic downturn in 2001 chalking up 2.3% GDP growth, as the domestic economy is offsetting the external slump and business and consumer confidence remains robust. Canberra's emphasis on reforms is a key factor behind the economy's strength, and Australia is expected to outperform its trading partners in 2002, with GDP growth projected to be 3% or better. Australia probably will experience some weakness in mid-2002 as its business cycle tends to lag the US by about six months, and larger problems could emerge if Australia's trade position worsens.

Austria

Introduction

Background: Once the center of power for the large Austro-Hungarian Empire, Austria was reduced to a small republic after its defeat in World War I. Following annexation by Nazi Germany in 1938 and subsequent occupation by the victorious Allies in 1945, Austria's status remained unclear for a decade. A State Treaty signed in 1955 ended the occupation, recognized Austria's independence, and forbade unification with Germany. A constitutional law of that same year declared the country's "perpetual neutrality" as a condition for Soviet military withdrawal. This neutrality, once ingrained as part of the Austrian cultural identity, has been called into question since the Soviet collapse of 1991 and Austria's entry into the European Union in 1995. A prosperous country, Austria entered the European Monetary Union in 1999.

Economy

Economy - overview: Austria, with its well-developed market economy and high standard of living, is closely tied to other EU economies, especially Germany's. Membership in the EU has drawn an influx of foreign investors attracted by Austria's access to the single European market and proximity to EU aspirant economies. Slowing growth in Germany and elsewhere in the world slowed the economy to only 1.2% growth in 2001; the economy is expected to do little better in 2002. To meet increased competition from both EU and Central European countries, Austria will need to emphasize knowledge-based sectors of the economy, continue to deregulate the service sector, and lower its tax burden.

Transnational Issues

Disputes - international: minor disputes with Czech Republic and Slovenia continue over nuclear power plants and post-World War II treatment of German-speaking minorities

Illicit drugs: transshipment point for Southwest Asian heroin and South American cocaine destined for Western Europe

Azerbaijan

Introduction

Background: Azerbaijan - a nation of Turkic Muslims - has been an independent republic since the collapse of the Soviet Union in 1991. Despite a 1994 cease-fire, Azerbaijan has yet to resolve its conflict with Armenia over the Azerbaijani Nagorno-Karabakh enclave (largely Armenian populated). Azerbaijan has lost almost 20% of its territory and must support some 750,000 refugees and internally displaced persons as a result of the conflict. Corruption is ubiquitous and the promise of widespread wealth from Azerbaijan's undeveloped petroleum resources remains largely unfulfilled.

Geography

Location: Southwestern Asia, bordering the Caspian Sea, between Iran and Russia

Geographic coordinates: 40 30 N, 47 30 E

Map references: Asia

Area:

total: 86,600 sq km

land: 86,100 sq km

water: 500 sq km

note: includes the exclave of Naxçıvan Autonomous Republic and the Nagorno-Karabakh region; the region's autonomy was abolished by Azerbaijani Supreme Soviet on 26 November 1991

Area - comparative: slightly smaller than Maine

Land boundaries:

total: 2,013 km

border countries: Armenia (with Azerbaijan-proper) 566 km, Armenia (with Azerbaijan-Naxçıvan exclave) 221 km, Georgia 322 km, Iran (with Azerbaijan-proper) 432 km, Iran (with Azerbaijan-Naxçıvan exclave) 179 km, Russia 284 km, Turkey 9 km

Coastline: 0 km (landlocked); **note** - Azerbaijan borders the Caspian Sea (800 km, est.)

Maritime claims: none (landlocked)

Climate: dry, semiarid steppe

Terrain: large, flat Kur-Araz Ovalıgi (Kura-Araks Lowland) (much of it below sea level) with Great Caucasus Mountains to the north, Qarabag Yaylası (Karabakh Upland) in west; Baku lies on Abşeron Yasaqlığı (Apscheron Peninsula) that juts into Caspian Sea

Elevation extremes:

lowest point: Caspian Sea -28 m

highest point: Bazarduzu Dagı 4,485 m

Natural resources: petroleum, natural gas, iron ore, nonferrous metals, alumina

Land use:

arable land: 19%

permanent crops: 3%

other: 78% (1998 est.)

Irrigated land: 14,550 sq km (1998 est.)

Natural hazards: droughts

Environment - current issues: local scientists consider the Abşeron Yasaqlığı (Apscheron Peninsula) (including Baku and Sumqayıt) and the Caspian Sea to be the ecologically most devastated area in the world because of severe air, water, and soil pollution; soil pollution results from the use of DDT as a pesticide and also from toxic defoliants used in the production of cotton

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Hazardous Wastes, Marine Dumping, Ozone Layer Protection, Wetlands
signed, but not ratified: none of the selected agreements

Geography - note: both the main area of the country and the Naxçıvan exclave are landlocked

Economy

Economy - overview: Azerbaijan's number one export is oil. Azerbaijan's oil production declined through 1997 but has registered an increase every year since. Negotiation of production-sharing arrangements (PSAs) with foreign firms, which have thus far committed \$60 billion to oilfield development, should generate the funds needed to spur future industrial development. Oil production under the first of these PSAs, with the Azerbaijan International Operating Company, began in November 1997. Azerbaijan shares all the formidable problems of the former Soviet republics in making the transition from a command to a market economy, but its considerable energy resources brighten its long-term prospects. Baku has only recently begun making progress on economic reform, and old economic ties and structures are slowly being replaced. An obstacle to economic progress, including stepped up foreign investment in the non-energy sector, is the continuing conflict with Armenia over the Nagorno-Karabakh region. Trade with Russia and the other former Soviet republics is declining in importance while trade is building with Turkey and the nations of Europe. Long-term prospects will depend on world oil prices, the location of new pipelines in the region, and Azerbaijan's ability to manage its oil wealth.

Transnational Issues

Disputes - international: Armenia supports ethnic Armenian secessionists in Nagorno-Karabakh and militarily occupies almost one-fifth of Azerbaijan - Organization for Security and Cooperation in Europe (OSCE) continues to mediate dispute; Azerbaijan signed bilateral agreements with Russia delimiting the Caspian seabed, but littoral states are far from multilateral agreement on dividing the waters and seabed regimes - Iran insists on division of Caspian Sea into five equal sectors while Azerbaijan, Kazakhstan, Russia, and Turkmenistan have generally agreed upon equidistant seabed boundaries; Iran threatens to conduct oil exploration in Azerbaijani-claimed waters, while interdicting Azerbaijani activities; Azerbaijan and Turkmenistan await ICJ decision to resolve sovereignty dispute over oilfields in the Caspian Sea

Illicit drugs: limited illicit cultivation of cannabis and opium poppy, mostly for CIS consumption; limited government eradication program; transshipment point for opiates via Iran, Central Asia, and Russia to Western Europe

Bahamas, The

Introduction

Background: Since attaining independence from the UK in 1973, The Bahamas have prospered through tourism and international banking and investment management. Because of its geography, the country is a major transshipment point for illegal drugs, particularly shipments to the US, and its territory is used for smuggling illegal migrants into the US.

Economy

Economy - overview: The Bahamas is a stable, developing nation with an economy heavily dependent on tourism and offshore banking. Tourism alone accounts for more than 60% of GDP and directly or indirectly employs almost half of the archipelago's labor force. Steady growth in tourism receipts and a boom in construction of new hotels, resorts, and residences have led to solid GDP growth in recent years. Manufacturing and agriculture together contribute approximately a tenth of GDP and show little growth, despite government incentives aimed at those sectors. Overall growth prospects in the short run rest heavily on the fortunes of the tourism sector, which depends on growth in the US, the source of the majority of tourist visitors.

Bahrain

Introduction

Background: Bahrain's small size and central location among Persian Gulf countries require it to play a delicate balancing act in foreign affairs among its larger neighbors. Possessing minimal oil reserves, Bahrain has turned to petroleum processing and refining, and has transformed itself into an international banking center. The new amir is pushing economic and political reforms, and has worked to improve relations with the Shi'a community. In February 2001, Bahraini voters approved a referendum on the National Action Charter - the centerpiece of the amir's political liberalization program.

Economy

Economy - overview: In Bahrain, petroleum production and refining account for about 60% of export receipts, 60% of government revenues, and 30% of GDP. With its highly developed communication and transport facilities, Bahrain is home to numerous multinational firms with business in the Gulf. Bahrain is dependent on Saudi Arabia for oil revenue granted as aid. A large share of exports consists of petroleum products made from refining imported crude. Construction proceeds on several major industrial projects. Unemployment, especially among the young, and the depletion of oil and underground water resources are major long-term economic problems.

Baker Island (territory of the US)

Introduction

Background: The US took possession of the island in 1857, and its guano deposits were mined by US and British companies during the second half of the 19th century. In 1935, a short-lived attempt at colonization was begun on this island - as well as on nearby Howland Island - but was disrupted by World War II and thereafter abandoned. Presently the island is a National Wildlife Refuge run by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

Irrigated land: 38,440 sq km (1998 est.)

Natural hazards: droughts, cyclones; much of the country routinely inundated during the summer monsoon season

Environment - current issues: many people are landless and forced to live on and cultivate flood-prone land; water-borne diseases prevalent in surface water; water pollution, especially of fishing areas, results from the use of commercial pesticides; ground water contaminated by naturally occurring arsenic; intermittent water shortages because of falling water tables in the northern and central parts of the country; soil degradation and erosion; deforestation; severe overpopulation

Environment - international agreements: *party to:* Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Nuclear Test Ban, Ozone Layer Protection, Wetlands

signed, but not ratified: none of the selected agreements

Geography - note: most of the country is situated on deltas of large rivers flowing from the Himalayas: the Ganges unites with the Jamuna (main channel of the Brahmaputra) and later joins the Meghna to eventually empty into the Bay of Bengal

Economy

Economy - overview: Despite sustained domestic and international efforts to improve economic and demographic prospects, Bangladesh remains a poor, overpopulated, and ill-governed nation. Although more than half of GDP is generated through the service sector, nearly two-thirds of Bangladeshis are employed in the agriculture sector, with rice as the single most important product. Major impediments to growth include frequent cyclones and floods, inefficient state-owned enterprises, inadequate port facilities, a rapidly growing labor force that cannot be absorbed by agriculture, delays in exploiting energy resources (natural gas), insufficient power supplies, and slow implementation of economic reforms. Economic reform is stalled in many instances by political infighting and corruption at all levels of government. Progress also has been blocked by opposition from the bureaucracy, public sector unions, and other vested interest groups. The newly-elected BNP government, led by Prime Minister Khaleda ZIA, has the parliamentary strength to push through needed reforms, but the party's level of political will to do so remains undetermined.

Illicit drugs: transit country for illegal drugs produced in neighboring countries

Barbados

Introduction

Background: The island was uninhabited when first settled by the British in 1627. Its economy remained heavily dependent on sugar, rum, and molasses production through most of the 20th century. In the 1990s, tourism and manufacturing surpassed the sugar industry in economic importance.

Economy

Economy - overview: Historically, the Barbadian economy had been dependent on sugarcane cultivation and related activities, but production in recent years has diversified into manufacturing and tourism. Offshore finance and information services are important foreign exchange earners, and there is also a light manufacturing sector. The government continues its efforts to reduce unemployment, encourage direct foreign investment, and privatize remaining state-owned enterprises. The economy contracted in 2001 due to slowdowns in tourism and consumer spending. Growth will remain anemic in 2002 with a recovery likely near the end of the year.

Belarus

Introduction

Background: After seven decades as a constituent republic of the USSR, Belarus attained its independence in 1991. It has retained closer political and economic ties to Russia than any of the other former Soviet republics. Belarus and Russia signed a treaty on a two-state union on 8 December 1999 envisioning greater political and economic integration; Belarus has agreed on the framework for implementation of the accord.

Economy

Economy - overview: Belarus has seen little structural reform since 1995, when President LUKASHENKO launched the country on the path of "market socialism." In keeping with this policy, LUKASHENKO reimposed administrative controls over prices and currency exchange rates and expanded the state's right to intervene in the management of private enterprise. In addition to the burdens imposed by high inflation and persistent trade deficits, businesses have been subject to pressure on the part of central and local governments, e.g., arbitrary changes in regulations, numerous rigorous inspections, retroactive application of new business regulations, and arrests of "disruptive" businessmen and factory owners. Close relations with Russia, possibly leading to reunion, color the pattern of economic developments. For the time being, Belarus remains self-isolated from the West and its open-market economies.

Belgium

Introduction

Background: Belgium became independent from the Netherlands in 1830 and was occupied by Germany during World Wars I and II. It has prospered in the past half century as a modern, technologically advanced European state and member of NATO and the EU. Tensions between the Dutch-speaking Flemings of the north and the French-speaking Walloons of the south have led in recent years to constitutional amendments granting these regions formal recognition and autonomy.

Economy

Economy - overview: This modern private enterprise economy has capitalized on its central geographic location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the populous Flemish area in the north. With few natural resources, Belgium must import substantial quantities of raw materials and export a large volume of manufactures, making its economy unusually dependent on the state of world markets. About three-quarters of its trade is with other EU countries. Belgium's public debt is expected to fall to about 100% of GDP in 2002, and the government has succeeded in balancing its budget. Belgium, together with 11 of its EU partners, began circulating euro currency in January 2002. Economic growth in 2001 dropped sharply due to the global economic slowdown. Prospects for 2002 depend largely on recovery in the EU and the US.

Belize

Introduction

Background: Territorial disputes between the UK and Guatemala delayed the independence of Belize (formerly British Honduras) until 1981. Guatemala refused to recognize the new nation until 1992. Tourism has become the mainstay of the economy. The country remains plagued by high unemployment, growing involvement in the South American drug trade, and increased urban crime.

Economy

Economy - overview: The small, essentially private enterprise economy is based primarily on agriculture, agro-based industry, and merchandising, with tourism and construction assuming greater importance. Sugar, the chief crop, accounts for nearly half of exports, while the banana industry is the country's largest employer. The government's expansionary monetary and fiscal policies, initiated in September 1998, led to GDP growth of 6.4% in 1999 and 10.5% in 2000. Growth decelerated in 2001 to 3% due to the global slowdown and severe hurricane damage to agriculture, fishing, and tourism. Major concerns continue to be the rapidly expanding trade deficit and foreign debt. A key short-term objective remains the reduction of poverty with the help of international donors.

Economy

Economy - overview: The economy of Benin remains underdeveloped and dependent on subsistence agriculture, cotton production, and regional trade. Growth in real output averaged a stable 5% in the past five years, but rapid population rise offset much of this increase. Inflation has subsided over the past several years. In order to raise growth still further, Benin plans to attract more foreign investment, place more emphasis on tourism, facilitate the development of new food processing systems and agricultural products, and encourage new information and communication technology. The 2001 privatization policy should continue in telecommunications, water, electricity, and agriculture in spite of initial government reluctance. The Paris Club and bilateral creditors have eased the external debt situation.

Bermuda

(overseas territory of the UK)

Introduction

Background: Bermuda was first settled in 1609 by shipwrecked English colonists headed for Virginia. Tourism to the island to escape North American winters first developed in Victorian times. Tourism continues to be important to the island's economy, although international business has overtaken it in recent years. Bermuda has developed into a highly successful offshore financial center. A referendum on independence was soundly defeated in 1995.

Economy

Economy - overview: Bermuda enjoys one of the highest per capita incomes in the world, with its economy primarily based on providing financial services for international business and luxury facilities for tourists. The effects of 11 September 2001 have had both positive and negative ramifications for Bermuda. On the positive side, a number of new reinsurance companies have located on the island, contributing to the expansion of an already robust international business sector. On the negative side, Bermuda's already weakening tourism industry - which derives over 80% of its visitors from the US - has been further hit as American tourists have chosen not to travel. Most capital equipment and food must be imported, with the US serving as the primary source of goods, followed by the UK. Bermuda's industrial sector is small, although construction continues to be important. Agriculture is limited, only 6% of the land being arable.

Bhutan

Introduction

Background: In 1865, Britain and Bhutan signed the Treaty of Sinchulu, under which Bhutan would receive an annual subsidy in exchange for ceding some border land. Under British influence, a monarchy was set up in 1907; three years later, a treaty was signed whereby the British agreed not to interfere in Bhutanese internal affairs and Bhutan allowed Britain to direct its foreign affairs. This role was assumed by independent India after 1947. Two years later, a formal Indo-Bhutanese accord returned the areas of Bhutan annexed by the British, formalized the annual subsidies the country received, and defined India's responsibilities in defense and foreign relations. A refugee issue of some 100,000 Bhutanese in Nepal remains unresolved; 90% of the refugees are housed in seven United Nations Office of the High Commissioner for Refugees (UNHCR) camps. Maoist Assamese separatists from India, who have established themselves in the southeast portion of Bhutan, have drawn Indian cross-border incursions.

Economy

Economy - overview: The economy, one of the world's smallest and least developed, is based on agriculture and forestry, providing the main livelihood for more than 90% of the population. Agriculture consists largely of subsistence farming and animal husbandry. Rugged mountains dominate the terrain and make the building of roads and other infrastructure difficult and expensive. The economy is closely aligned with India's through strong trade and monetary links. The industrial sector is technologically backward, with most production of the cottage industry type. Most development projects, such as road construction, rely on Indian migrant labor. Bhutan's hydropower potential and its attraction for tourists are key resources. The Bhutanese Government has made some progress in expanding the nation's productive base and improving social welfare. Model education, social, and environment programs in Bhutan are underway with support from multilateral development organizations. Each economic program takes into account the government's desire to protect the country's environment and cultural traditions. Detailed controls and uncertain policies in areas like industrial licensing, trade, labor, and finance continue to hamper foreign investment. Major hydroelectric projects will lead expansion of GDP in 2002 by an estimated 6%.

Bolivia

Introduction

Background: Bolivia, named after independence fighter Simon BOLIVAR, broke away from Spanish rule in 1825; much of its subsequent history has consisted of a series of nearly 200 coups and counter-coups. Comparatively democratic civilian rule was established in the 1980s, but leaders have faced difficult problems of deep-seated poverty, social unrest, and drug production. Current goals include attracting foreign investment, strengthening the educational system, continuing the privatization program, and waging an anticorruption campaign.

Economy

Economy - overview: Bolivia, long one of the poorest and least developed Latin American countries, has made considerable progress toward the development of a market-oriented economy. Successes under President SANCHEZ DE LOZADA (1993-97) included the signing of a free trade agreement with Mexico and becoming an associate member of the Southern Cone Common Market (Mercosur), as well as the privatization of the state airline, telephone company, railroad, electric power company, and oil company. Growth slowed in 1999, in part due to tight government budget policies, which limited needed appropriations for anti-poverty programs, and the fallout from the Asian financial crisis. In 2000, major civil disturbances in April, and again in September and October, held down overall growth to 2.5%. Bolivia's GDP failed to grow in 2001 due to the global slowdown and laggard domestic activity. Growth is expected to pick up in 2002, but the fiscal deficit and debt burden will remain high.

Bosnia and Herzegovina

Introduction

Background: Bosnia and Herzegovina's declaration of sovereignty in October 1991, was followed by a declaration of independence from the former Yugoslavia on 3 March 1992 after a referendum boycotted by ethnic Serbs. The Bosnian Serbs - supported by neighboring Serbia and Montenegro - responded with armed resistance aimed at partitioning the republic along ethnic lines and joining Serb-held areas to form a "greater Serbia." In March 1994, Bosniaks and Croats reduced the number of warring factions from three to two by signing an agreement creating a joint Bosniak/Croat Federation of Bosnia and Herzegovina. On 21 November 1995, in Dayton, Ohio, the warring parties signed a peace agreement that brought to a halt the three years of interethnic civil strife (the final agreement was signed in Paris on 14 December 1995). The Dayton Agreement retained Bosnia and Herzegovina's international boundaries and created a joint multi-ethnic and democratic government. This national government was charged with conducting foreign, economic, and fiscal policy. Also recognized was a second tier of government comprised of two entities roughly equal in size: the Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb-led Republika Srpska (RS). The Federation and RS governments were charged with overseeing internal functions. In 1995-96, a NATO-led international peacekeeping force (IFOR) of 60,000 troops served in Bosnia to implement and monitor the military aspects of the agreement. IFOR was succeeded by a smaller, NATO-led Stabilization Force (SFOR) whose mission is to deter renewed hostilities. SFOR remains in place at the January 2002 level of approximately 18,000 troops, though further reductions may take place later in the year.

Government - note: The Dayton Agreement, signed in Paris on 14 December 1995, retained Bosnia and Herzegovina's exterior border and created a joint multi-ethnic and democratic government. This national government - based on proportional representation similar to that which existed in the former socialist regime - is charged with conducting foreign, economic, and fiscal policy. The Dayton Agreement also recognized a second tier of government, comprised of two entities - a joint Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb Republika Srpska (RS) - each presiding over roughly one-half the territory. The Federation and RS governments are charged with overseeing internal functions. The Bosniak/Croat Federation is further divided into 10 cantons. The Dayton Agreement established the Office of the High Representative (OHR) to oversee the implementation of the civilian aspects of the agreement. About 250 international and 450 local staff members are employed by the OHR.

Economy

Economy - overview: Bosnia and Herzegovina ranked next to The Former Yugoslav Republic of Macedonia as the poorest republic in the old Yugoslav federation. Although agriculture is almost all in private hands, farms are small and inefficient, and the republic traditionally is a net importer of food. Industry has been greatly overstaffed, one reflection of the socialist economic structure of Yugoslavia. TITO had pushed the development of military industries in the republic with the result that Bosnia hosted a large share of Yugoslavia's defense plants. The bitter interethnic warfare in Bosnia caused production to plummet by 80% from 1990 to 1995, unemployment to soar, and human misery to multiply. With an uneasy peace in place, output recovered in 1996-99 at high percentage rates from a low base; but output growth slowed in 2000 and 2001. GDP remains far below the 1990 level. Economic data are of limited use because, although both entities issue figures, national-level statistics are limited. Moreover, official data do not capture the large share of activity that occurs on the black market. The marka - the national currency introduced in 1998 - is now pegged to the euro, and the Central Bank of Bosnia and Herzegovina has dramatically increased its reserve holdings. Implementation of privatization, however, has been slow, and local entities only reluctantly support national-level institutions. Banking reform accelerated in 2001 as all the communist-era payments bureaus were shut down. The country receives substantial amounts of reconstruction assistance and humanitarian aid from the international community but will have to prepare for an era of declining assistance.

Economy

Economy - overview: Botswana has maintained one of the world's highest growth rates since independence in 1966. Through fiscal discipline and sound management, Botswana has transformed itself from one of the poorest countries in the world to a middle-income country with a per capita GDP of \$7,800 in 2001. Two major investment services rank Botswana as the best credit risk in Africa. Diamond mining has fueled much of expansion and currently accounts for more than one-third of GDP and for four-fifths of export earnings. Tourism, subsistence farming, and cattle raising are other key sectors. On the downside, the government must deal with high rates of unemployment and poverty. Unemployment officially is 21%, but unofficial estimates place it closer to 40%. HIV/AIDS infection rates are the highest in the world and threaten Botswana's impressive economic gains.

Bouvet Island

(territory of Norway)

Introduction

Background: This uninhabited volcanic island is almost entirely covered by glaciers and is difficult to approach. It was discovered in 1739 by a French naval officer after whom the island was named. No claim was made until 1825 when the British flag was raised. In 1928, the UK waived its claim in favor of Norway, which had occupied the island the previous year. In 1971, Bouvet Island and the adjacent territorial waters were designated a nature reserve. Since 1977, Norway has run an automated meteorological station on the island.

Brazil

Introduction

Background: Following three centuries under the rule of Portugal, Brazil became an independent nation in 1822. By far the largest and most populous country in South America, Brazil has overcome more than half a century of military intervention in the governance of the country to pursue industrial and agricultural growth and development of the interior. Exploiting vast natural resources and a large labor pool, Brazil became South America's leading economic power by the 1970s. Highly unequal income distribution remains a pressing problem.

Geography

Location: Eastern South America, bordering the Atlantic Ocean
Geographic coordinates: 10 00 S, 55 00 W
Map references: South America
Area:
total: 8,511,965 sq km

Economy

Economy - overview: Possessing large and well-developed agricultural, mining, manufacturing, and service sectors, Brazil's economy outweighs that of all other South American countries and is expanding its presence in world markets. The maintenance of large current account deficits via capital account surpluses became problematic as investors became more risk averse to emerging market exposure as a consequence of the Asian financial crisis in 1997 and the Russian bond default in August 1998. After crafting a fiscal adjustment program and pledging progress on structural reform, Brazil received a \$41.5 billion IMF-led international support program in November 1998. In January 1999, the Brazilian Central Bank announced that the real

would no longer be pegged to the US dollar. This devaluation helped moderate the downturn in economic growth in 1999 that investors had expressed concerns about over the summer of 1998, and the country posted moderate GDP growth. Economic growth slowed considerably in 2001 - to less than 2% - because of a slowdown in major markets and the hiking of interest rates by the Central Bank to combat inflationary pressures. Investor confidence was strong at yearend 2001, in part because of the strong recovery in the trade balance.

British Indian Ocean Territory

(overseas territory of the UK)

Introduction

Background: Established as a territory of the UK in 1965, a number of the British Indian Ocean Territory (BIOT) islands were transferred to the Seychelles when it attained independence in 1976.

Subsequently, BIOT has consisted only of the six main island groups comprising the Chagos Archipelago. The largest and most southerly of the islands, Diego Garcia, contains a joint UK-US naval support facility. All of the remaining islands are uninhabited. Former agricultural workers, earlier residents in the islands, were relocated primarily to Mauritius but also to the Seychelles, between 1967 and 1973. In 2000, a British High Court ruling invalidated the local immigration order which had excluded them from the archipelago, but upheld the special military status of Diego Garcia.

Economy

Economy - overview: The economy, one of the most stable and prosperous in the Caribbean, is highly dependent on tourism, generating an estimated 45% of the national income. An estimated 350,000 tourists, mainly from the US, visited the islands in 1998. In the mid-1980s, the government began offering offshore

registration to companies wishing to incorporate in the islands, and incorporation fees now generate substantial revenues. Roughly 400,000 companies were on the offshore registry by yearend 2000. The adoption of a comprehensive insurance law in late 1994, which provides a blanket of confidentiality with regulated statutory gateways for investigation of criminal offenses, is expected to make the British Virgin Islands even more attractive to international business. Livestock raising is the most important agricultural activity; poor soils limit the islands' ability to meet domestic food requirements. Because of traditionally close links with the US Virgin Islands, the British Virgin Islands has used the dollar as its currency since 1959.

Brunei

Introduction

Background: The Sultanate of Brunei's heyday occurred between the 15th and 17th centuries, when its control extended over coastal areas of northwest Borneo and the southern Philippines. Brunei subsequently entered a period of decline brought on by internal strife over royal succession, colonial expansion of European powers, and piracy. In 1888, Brunei became a British protectorate; independence was achieved in 1984. Brunei benefits from extensive petroleum and natural gas fields, the source of one of the highest per capita GDPs in the less developed countries. The same family has now ruled Brunei for over six centuries.

Economy

Economy - overview: This small, wealthy economy is a mixture of foreign and domestic entrepreneurship, government regulation, welfare measures, and village tradition. Crude oil and natural gas production account for nearly half of GDP. Per capita GDP is far above most other Third World countries, and substantial income from overseas investment supplements income from domestic production. The government provides for all medical services and subsidizes rice and housing. Brunei's leaders are concerned that steadily increased integration in the world economy will undermine internal social cohesion although it became a more prominent player by serving as chairman for the 2000 APEC (Asian Pacific Economic Cooperation) forum. Plans for the future include upgrading the labor force, reducing unemployment, strengthening the banking and tourist sectors, and, in general, further widening the economic base beyond oil and gas.

Illicit drugs: drug trafficking and illegally importing controlled substances are serious offenses in Brunei and carry a mandatory death penalty

Bulgaria

Introduction

Background: The Bulgars, a Central Asian Turkic tribe, merged with the local Slavic inhabitants in the late 7th century to form the first Bulgarian state. In succeeding centuries, Bulgaria struggled with the Byzantine Empire to assert its place in the Balkans, but by the end of the 14th century the country was overrun by the Ottoman Turks. Bulgaria regained its independence in 1878, but having fought on the losing side in both World Wars, it fell within the Soviet sphere of influence and became a People's Republic in 1946. Communist domination ended in 1990, when Bulgaria held its first multiparty election since World War II and began the contentious process of moving toward political democracy and a market economy while combating inflation, unemployment, corruption, and crime. Today, reforms and democratization keep Bulgaria on a path toward eventual integration into NATO and the EU - with which it began accession negotiations in 2000.

Flag description: three equal horizontal bands of white (top), green, and red; the national emblem formerly on the hoist side of the white stripe has been removed - it contained a rampant lion within a wreath of wheat ears below a red five-pointed star and above a ribbon bearing the dates 681 (first Bulgarian state established) and 1944 (liberation from Nazi control)

Economy

Economy - overview: Bulgaria, a former communist country striving to enter the European Union, has experienced macroeconomic stability and positive growth rates since a major economic downturn in 1996 led to the fall of the then socialist government. The current government, elected in 2001, has pledged to maintain the fundamental economic policy objectives of its predecessor, i.e., retaining the Currency Board, practicing sound financial policies, accelerating privatization, and pursuing structural reforms. A \$300 million stand-by agreement negotiated with the IMF at the end of 2001 will help the government maintain economic stability as it seeks to overcome high rates of poverty and unemployment.

Economy

Economy - overview: One of the poorest countries in the world, landlocked Burkina Faso has a high population density, few natural resources, and a fragile soil. About 90% of the population is engaged in (mainly subsistence) agriculture, which is highly vulnerable to variations in rainfall. Industry remains dominated by unprofitable government-controlled corporations. Following the African franc currency devaluation in January 1994 the government updated its development program in conjunction with international agencies, and exports and economic growth have increased. Maintenance of macroeconomic progress depends on continued low inflation, reduction in the trade deficit, and reforms designed to encourage private investment.

Economy

Economy - overview: Burma is a resource-rich country that suffers from abject rural poverty. The military regime took steps in the early 1990s to liberalize the economy after decades of failure under the "Burmese Way to Socialism", but those efforts have since stalled. Burma has been unable to achieve monetary or fiscal stability, resulting in an economy that suffers from serious macroeconomic imbalances - including an official exchange rate that overvalues the Burmese kyat by more than 100 times the market rate. In addition, most overseas development assistance ceased after the junta suppressed the democracy movement in 1988 and subsequently ignored the results of the 1990 election. Burma is data poor, and official statistics are often dated and inaccurate. Published estimates of Burma's foreign trade are greatly understated because of the size of the black market and border trade - often estimated to be one to two times the official economy.

Transnational Issues

Disputes - international: despite renewed border committee talks, significant differences remain with Thailand over boundary alignment and the handling of ethnic guerrilla rebels, refugees, smuggling, and drug trafficking in cross-border region; Burmese attempts to construct a dam on border stream with Bangladesh in 2001 prompted an armed response halting construction; Burmese Muslim migration into Bangladesh strains Bangladesh's meager resources
Illicit drugs: world's largest producer of illicit opium, surpassing Afghanistan (potential production in 2001 - 865 metric tons, down 21% due to drought, and to a lesser extent, eradication; cultivation in 2002 - 105,000 hectares, a 3% decline from 2000); surrender of drug warlord KHUN SA's Mong Tai Army in January 1996 was hailed by Rangoon as a major counternarcotics success, but lack of government will and ability to take on major narcotrafficking groups and lack of serious commitment against money laundering continues to hinder the overall antidrug effort; major source of methamphetamine and heroin for regional consumption

Burundi

Introduction

Background: Burundi's first democratically elected president was assassinated in October 1993 after only four months in office. Since then, some 200,000 Burundians have perished in widespread, often intense ethnic violence between Hutu and Tutsi factions. Hundreds of thousands have been internally displaced or have become refugees in neighboring countries. Burundian troops, seeking to secure their borders, intervened in the conflict in the Democratic Republic of the Congo in 1998. More recently, many of these troops have been redeployed back to Burundi to deal with periodic upsurges in rebel activity. A new transitional government, inaugurated on 1 November 2001, was to be the first step towards holding national elections in three years. However, the unwillingness of the Hutu rebels to enact a cease fire with Bujumbura continues to obstruct prospects for a sustainable peace.

Geography

Economy

Economy - overview: Burundi is a landlocked, resource-poor country with an underdeveloped manufacturing sector. The economy is predominantly agricultural with roughly 90% of the population dependent on subsistence agriculture. Its economic health depends on the coffee crop, which accounts for 80% of foreign exchange earnings. The ability to pay for imports therefore rests largely on the vagaries of the climate and the international coffee market. Since October 1993 the nation has suffered from massive ethnic-based violence which has resulted in the death of more than 200,000 persons and the displacement of about 800,000 others. Only one in four children go to school, and more than one in ten adults has HIV/AIDS. Foods, medicines, and electricity remain in short supply. Doubts regarding the sustainability of peace continue to impede development. A Geneva donors' conference in November 2001 brought \$800 million in pledges, and an IMF-staff-monitored program could lead to a further agreement in 2002.

Cambodia

Introduction

Background: Following a five-year struggle, Communist Khmer Rouge forces captured Phnom Penh in 1975 and ordered the evacuation of all cities and towns; over 1 million displaced people died from execution or enforced hardships. A 1978 Vietnamese invasion drove the Khmer Rouge into the countryside and touched off 13 years of fighting. UN-sponsored elections in 1993 helped restore some semblance of normalcy, as did the rapid diminishment of the Khmer Rouge in the mid-1990s. A coalition government, formed after national elections in 1998, brought renewed political stability and the surrender of remaining Khmer Rouge forces.

Economy

Economy - overview: Cambodia's economy slowed dramatically in 1997-98 due to the regional economic crisis, civil violence, and political infighting. Foreign investment and tourism fell off. In 1999, the first full year of peace in 30 years, progress was made on economic reforms and growth resumed at 5%. GDP growth for 2000 had been projected to reach 5.5%, but the worst flooding in 70 years severely damaged agricultural crops, and high oil prices hurt industrial production, and growth for the year is estimated at only 4%. In 2001, severe floods damaged an estimated 15% of the area devoted to rice. Tourism now is Cambodia's fastest growing industry, with arrivals up 34% in 2000 and up another 40% in 2001 before the September 11 terrorist attacks in the US. The long-term development of the economy after decades of war remains a daunting challenge. The population lacks education and productive skills, particularly in the poverty-ridden countryside, which suffers from an almost total lack of basic infrastructure. Fear of renewed political instability and corruption within the government discourage foreign investment and delay foreign aid. On the brighter side, the government is addressing these issues with assistance from bilateral and multilateral donors.

Transnational Issues

Disputes - international: demarcation of boundaries with Cambodia, Thailand, and Vietnam is nearing completion; accuses Thailand of moving or destroying boundary markers and encroachment, of not respecting its claims, and of sealing off access to the Preah Vihear temple ruin awarded to Cambodia by the ICJ in 1962; accuses Vietnam of territorial encroachments and initiating armed border incidents

in seven provinces, despite substantial demarcation efforts to date; disputes several offshore islands with Vietnam, which prevents delimitation of a maritime boundary

Illicit drugs: possible money laundering; narcotics-related corruption reportedly involving some in the government, military, and police; possible small-scale opium, heroin, and amphetamine production; large producer of cannabis for the international market

Cameroon

Introduction

Background: The former French Cameroon and part of British Cameroon merged in 1961 to form the present country. Cameroon has generally enjoyed stability, which has permitted the development of agriculture, roads, and railways, as well as a petroleum industry. Despite movement toward democratic reform, political power remains firmly in the hands of an ethnic oligarchy.

Economy

Economy - overview: Because of its oil resources and favorable agricultural conditions, Cameroon has one of the best-endowed primary commodity economies in sub-Saharan Africa. Still, it faces many of the serious problems facing other underdeveloped countries, such as a top-heavy civil service and a generally unfavorable climate for business enterprise. Since 1990, the government has embarked on various IMF and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. In June 2000, the government completed an IMF-sponsored, three-year structural adjustment program; however, the IMF is pressing for more reforms, including increased budget transparency and privatization. International oil and cocoa prices have considerable impact on the economy.

Transnational Issues

Disputes - international: oral arguments on the land and maritime boundary disputes between Cameroon and Nigeria were presented to the ICJ; disputes center around Bakasi Peninsula, where armed clashes continue, Bouram Island on Lake Chad, and the maritime boundary and economic zone dispute in the Gulf of Guinea, which also involves Equatorial Guinea; Lake Chad Basin Commission urges signatories Cameroon, Chad, Niger, and Nigeria to ratify delimitation treaty over lake region, the site of continuing armed clashes

Canada

Introduction

Background: A land of vast distances and rich natural resources, Canada became a self-governing dominion in 1867 while retaining ties to the British crown. Economically and technologically the nation has developed in parallel with the US, its neighbor to the south across an unfortified border. Its paramount political problem continues to be the relationship of the province of Quebec, with its French-speaking residents and unique culture, to the remainder of the country.

Geography

Location: Northern North America, bordering the North Atlantic Ocean on the east, North Pacific Ocean on the west, and the Arctic Ocean on the north, north of the conterminous US

Geographic coordinates: 60 00 N, 95 00 W

Map references: North America

Area:

total: 9,976,140 sq km

land: 9,220,970 sq km

water: 755,170 sq km

Area - comparative: slightly larger than the US

Land boundaries:

total: 8,893 km

border countries: US 8,893 km (includes 2,477 km with Alaska)

Coastline: 243,791 km

Maritime claims:

contiguous zone: 24 NM

continental shelf: 200 NM or to the edge of the continental margin

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: varies from temperate in south to subarctic and arctic in north

Terrain: mostly plains with mountains in west and lowlands in southeast

Elevation extremes:

lowest point: Atlantic Ocean 0 m

highest point: Mount Logan 5,959 m

Natural resources: iron ore, nickel, zinc, copper, gold, lead, molybdenum, potash, silver, fish, timber, wildlife, coal, petroleum, natural gas, hydropower

Land use:

arable land: 5%

permanent crops: 0%

other: 95% (1998 est.)

Irrigated land: 7,200 sq km (1998 est.)

Natural hazards: continuous permafrost in north is a serious obstacle to development; cyclonic storms form east of the Rocky Mountains, a result of the mixing of air masses from the Arctic, Pacific, and North American interior, and produce most of the country's rain and snow east of the mountains

Environment - current issues: air pollution and resulting acid rain severely affecting lakes and damaging forests; metal smelting, coal-burning utilities, and vehicle emissions impacting on agricultural and forest productivity; ocean waters becoming contaminated due to agricultural, industrial, mining, and forestry activities

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Air Pollution-Persistent Organic Pollutants, Air Pollution-Sulphur 85, Air Pollution-Sulphur 94, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Marine Dumping, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands

signed, but not ratified: Air Pollution-Volatile Organic Compounds, Antarctic-Environmental Protocol, Climate Change-Kyoto Protocol, Law of the Sea, Marine Life Conservation

Geography - note: second-largest country in world (after Russia); strategic location between Russia and US via north polar route; approximately 85% of the population is concentrated within 300 km of the US/Canada border

Economy

Economy - overview: As an affluent, high-tech industrial society, Canada today closely resembles the US in its market-oriented economic system, pattern of production, and high living standards. Since World War II, the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. The 1989 US-Canada Free Trade Agreement (FTA) and 1994 North American Free Trade Agreement (NAFTA) (which includes Mexico) touched off a dramatic increase in trade and economic integration with the US. As a result of the close cross-border relationship, the economic downturn in the United States in 2001 had a negative impact on the Canadian economy. Real growth averaged nearly 3% during 1993-2000, but declined in 2001. Unemployment is up, with

Canada (continued)

contraction in the manufacturing and natural resource sectors. Nevertheless, with its great natural resources, skilled labor force, and modern capital plant Canada enjoys solid economic prospects. Two shadows loom, the first being the continuing constitutional impasse between English- and French-speaking areas, which has been raising the possibility of a split in the federation. Another long-term concern is the flow south to the US of professionals lured by higher pay, lower taxes, and the immense high-tech infrastructure.

Cape Verde

Introduction

Background: The uninhabited islands were discovered and colonized by the Portuguese in the 15th century; they subsequently became a trading center for African slaves and later an important coaling and resupply stop for whaling and transatlantic shipping. Most Cape Verdeans have both African and Portuguese antecedents. Independence was achieved in 1975.

Economy

Economy - overview: Cape Verde suffers from a poor natural resource base, including serious water shortages exacerbated by cycles of long-term drought. The economy is service-oriented, with commerce, transport, and public services accounting for 70% of GDP. Although nearly 70% of the population lives in rural areas, the share of agriculture in GDP in 2001 was only 11%, of which fishing accounts for 1.5%. About 82% of food must be imported. The fishing potential, mostly lobster and tuna, is not fully exploited. Cape Verde annually runs a high trade deficit, financed by foreign aid and remittances from emigrants; remittances supplement GDP by more than 20%. Economic reforms, launched by the new democratic government in 1991, are aimed at developing the private sector and attracting foreign investment to diversify the economy. Prospects for 2002 depend heavily on the maintenance of aid flows, remittances, and the momentum of the government's development program.

Economy

Economy - overview: Subsistence agriculture, together with forestry, remains the backbone of the economy of the Central African Republic (CAR), with more than 70% of the population living in outlying areas. The agricultural sector generates half of GDP. Timber has accounted for about 16% of export earnings and the diamond industry for 54%. Important constraints to economic development include the CAR's landlocked position, a poor transportation system, a largely unskilled work force, and a legacy of misdirected macroeconomic policies. The 50% devaluation of the currencies of 14 Francophone African nations on 12 January 1994 had mixed effects on the CAR's economy. Diamond, timber, coffee, and cotton exports increased, leading an estimated rise of

Chad

Introduction

Background: Chad, part of France's African holdings until 1960, endured three decades of ethnic warfare as well as invasions by Libya before a semblance of peace was finally restored in 1990. The government eventually suppressed or came to terms with most political-military groups, settled a territorial dispute with Libya on terms favorable to Chad, drafted a democratic constitution, and held multiparty presidential and National Assembly elections in 1996 and 1997 respectively. In 1998 a new rebellion broke out in northern Chad, which continued to escalate throughout 2000. A peace agreement, signed in January 2002 between the government and the rebels, provides for the demobilization of the rebels and their reintegration into the political system. Despite movement toward democratic reform, power remains in the hands of a northern ethnic oligarchy.

Economy

Economy - overview: Chad's primarily agricultural economy will be boosted by major oilfield and pipeline projects that began in 2000. Over 80% of Chad's population relies on subsistence farming and stock raising for their livelihood. Cotton, cattle, and gum arabic provide the bulk of Chad's export earnings, but Chad will begin to export oil in 2004. Chad's economy has long been handicapped by its land-locked position, high energy costs, and a history of instability. Chad relies on foreign assistance and foreign capital for most public and private sector investment projects. A consortium led by two US companies is investing \$3.7 billion to develop oil reserves estimated at 1 billion barrels in southern Chad.

Economy

Economy - overview: Chile has a market-oriented economy characterized by a high level of foreign trade. During the early 1990s, Chile's reputation as a role model for economic reform was strengthened when the democratic government of Patricio AYLWIN - which took over from the military in 1990 - deepened the economic reform initiated by the military government. Growth in real GDP averaged 8% during 1991-97, but fell to half that level in 1998 because of tight monetary policies implemented to keep the current account deficit in check and because of lower export earnings - the latter a product of the global financial crisis. A severe drought exacerbated the recession in 1999, reducing crop yields and causing hydroelectric shortfalls and electricity rationing, and Chile experienced negative economic growth for the first time in more than 15 years. Despite the effects of the recession, Chile maintained its reputation for strong financial institutions and sound policy that have given it the strongest sovereign bond rating in South America. By the end of 1999, exports and economic activity had begun to recover, and growth rebounded to 5.4% in 2000. Unemployment remains stubbornly high, however, putting pressure on President LAGOS to improve living standards. The Argentine financial meltdown has put pressure on the Chilean peso and is slowing the country's economic growth. Meanwhile, Chile and the US are conducting negotiations for a free trade agreement.

Introduction

Background: For centuries China stood as a leading civilization, outpacing the rest of the world in the arts and sciences. But in the 19th and early 20th centuries, China was beset by civil unrest, major famines, military defeats, and foreign occupation. After World War II, the Communists under MAO Zedong established a dictatorship that, while ensuring China's sovereignty, imposed strict controls over everyday life and cost the lives of tens of millions of people. After 1978, his successor DENG Xiaoping gradually introduced market-oriented reforms and decentralized economic decision making, and output quadrupled by 2000. Political controls remain tight even while economic controls continue to be relaxed.

Economy

Economy - overview: In late 1978 the Chinese leadership began moving the economy from a sluggish Soviet-style centrally planned economy to a more market-oriented system. Whereas the system operates within a political framework of strict Communist control, the economic influence of non-state organizations and individual citizens has been steadily increasing. The authorities have switched to a system of household and village responsibility in agriculture in place of the old collectivization, increased the authority of local officials and plant managers in industry, permitted a wide variety of small-scale enterprise in services and light manufacturing, and opened the economy to increased foreign trade and investment. The result has been a quadrupling of GDP since 1978. In 2001, with its 1.27 billion people but a GDP of just \$4,300

per capita, China stood as the second largest economy in the world after the US (measured on a purchasing power parity basis). Agriculture and industry have posted major gains, especially in coastal areas near Hong Kong and opposite Taiwan, where foreign investment has helped spur output of both domestic and export goods. On the darker side, the leadership has often experienced in its hybrid system the worst results of socialism (bureaucracy and lassitude) and of capitalism (windfall gains and growing income disparities). Beijing thus has periodically backtracked, retightening central controls at intervals. The government has struggled to (a) collect revenues due from provinces, businesses, and individuals; (b) reduce corruption and other economic crimes; and (c) keep afloat the large state-owned enterprises many of which had been shielded from competition by subsidies and had been losing the ability to pay full wages and pensions. From 80 to 120 million surplus rural workers are adrift between the villages and the cities, many subsisting through part-time low-paying jobs. Popular resistance, changes in central policy, and loss of authority by rural cadres have weakened China's population control program, which is essential to maintaining long-term growth in living standards. Another long-term threat to continued rapid economic growth is the deterioration in the environment, notably air pollution, soil erosion, and the steady fall of the water table especially in the north. China continues to lose arable land because of erosion and economic development. Beijing will intensify efforts to stimulate growth through spending on infrastructure - such as water control and power grids - and poverty relief and through rural tax reform aimed at eliminating arbitrary local levies on farmers. Access to the World Trade Organization strengthens China's ability to maintain sturdy growth rates, and at the same time puts additional pressure on the hybrid system of strong political controls and growing market influences. Although Beijing has claimed 7%-8% annual growth in recent years, many observers believe the rate, while strong, is more like 5%. **GDP:** purchasing power parity - \$5.56 trillion (2001 est.)

Christmas Island (territory of Australia)

Introduction

Background: Named in 1643 for the day of its discovery, the island was annexed and settlement was begun by the UK in 1888. Phosphate mining began in the 1890s. The UK transferred sovereignty to Australia in 1958. Almost two-thirds of the island has been declared a national park.

Clipperton Island (possession of France)

Introduction

Background: This isolated island was named for John CLIPPERTON, a pirate who made it his hideout early in the 18th century. Annexed by France in 1855, it was seized by Mexico in 1897. Arbitration eventually awarded the island to France, which took possession in 1935.

Cocos (Keeling) Islands

(territory of Australia)

Introduction

Background: There are 27 coral islands in the group. Captain William Keeling discovered the islands in 1609, but they remained uninhabited until the 19th century. Annexed by the UK in 1857, they were transferred to the Australian Government in 1955. The population on the two inhabited islands generally is split between the ethnic Europeans on West Island and the ethnic Malays on Home Island.

Colombia

Introduction

Background: Colombia was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Ecuador and Venezuela). A 40-year insurgent campaign to overthrow the Colombian Government escalated during the 1990s, undergirded in part by funds from the drug trade. Although the violence is deadly and large swaths of the countryside are under guerrilla influence, the movement lacks the military strength or popular support necessary to overthrow the government. An anti-insurgent army of paramilitaries has grown to be several thousand strong in recent years, challenging the insurgents for control of territory and illicit industries such as the drug trade and the government's ability to exert its dominion over rural areas. While Bogotá continues to try to negotiate a settlement, neighboring countries worry about the violence spilling over their borders.

Economy

Economy - overview: Colombia's economy suffered from weak domestic demand, austere government budgets, and a difficult security situation. A new president takes office in 2002 and will face economic challenges ranging from pension reform to reduction of unemployment. Two of Colombia's leading exports, oil and coffee, face an uncertain future; new exploration is needed to offset declining oil production, while coffee harvests and prices are depressed. Problems in public security are a concern for Colombian business leaders, who are calling for progress in the government's peace negotiations with insurgent groups. Colombia is looking for continued support from the international community to boost economic and peace prospects.

Comoros

Introduction

Background: Unstable Comoros has endured 19 coups or attempted coups since gaining independence from France in 1975. In 1997, the islands of Anjouan and Mohéli declared their independence from Comoros. In 1999, military chief Col. AZALI seized power. He has pledged to resolve the secessionist crisis through a confederal arrangement named the 2000 Fomboni Accord. In December 2001, voters approved a new constitution and presidential elections took place in the spring of 2002.

Economy

Economy - overview: One of the world's poorest countries, Comoros is made up of three islands that have inadequate transportation links, a young and rapidly increasing population, and few natural resources. The low educational level of the labor force contributes to a subsistence level of economic activity, high unemployment, and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing, hunting, and forestry, contributes

40% to GDP, employs 80% of the labor force, and provides most of the exports. The country is not self-sufficient in food production; rice, the main staple, accounts for the bulk of imports. The government is struggling to upgrade education and technical training, to privatize commercial and industrial enterprises, to improve health services, to diversify exports, to promote tourism, and to reduce the high population growth rate. Increased foreign support is essential if the goal of 4% annual GDP growth is to be met. Remittances from 150,000 Comorans abroad help supplement GDP.

Congo, Democratic Republic of the

Introduction

Background: Since 1997 the Democratic Republic of the Congo (DROC; formerly called Zaire) has been rent by ethnic strife and civil war, touched off by a massive inflow in 1994 of refugees from the fighting in Rwanda and Burundi. The government of former president MOBUTU Sese Seko was toppled by a rebellion led by Laurent KABILA in May 1997; his regime was subsequently challenged by a Rwanda- and Uganda-backed rebellion in August 1998. Troops from Zimbabwe, Angola, Namibia, Chad, and Sudan intervened to support the Kinshasa regime. A cease-fire was signed on 10 July 1999 by the DROC, Zimbabwe, Angola, Uganda, Namibia, Rwanda, and Congolese armed rebel groups RCD-G and MLC, but sporadic fighting continued. KABILA was assassinated on 16 January 2001 and his son Joseph KABILA was named head of state on 26 January 2001. Despite taking a radically different approach than his father, the new president has been equally unsuccessful in ending the war.

Economy

Economy - overview: The economy of the Democratic Republic of the Congo - a nation endowed with vast potential wealth - has declined drastically since the mid-1980s. The war, which began in August 1998, has dramatically reduced national output and government revenue and has increased external debt. Foreign businesses have curtailed operations due to uncertainty about the outcome of the conflict, lack of infrastructure, and the difficult operating environment. The war has intensified the impact of such basic problems as an uncertain legal framework, corruption, raging inflation, and lack of openness in government economic policy and financial operations. A number of IMF and World Bank missions have met with the government to help it develop a coherent economic plan, and President KABILA has begun implementing reforms.

Congo, Republic of the

Introduction

Background: Upon independence in 1960, the former French region of Middle Congo became the Republic of the Congo. A quarter century of experimentation with Marxism was abandoned in 1990 and a democratically elected government installed in 1992. A brief civil war in 1997 restored former Marxist President SASSOU-NGUESSO.

Economy

Economy - overview: The economy is a mixture of village agriculture and handicrafts, an industrial sector based largely on oil, support services, and a government characterized by budget problems and overstaffing. Oil has supplanted forestry as the mainstay of the economy, providing a major share of government revenues and exports. In the early 1980s, rapidly rising oil revenues enabled the government to finance large-scale development projects with GDP growth averaging 5% annually, one of the highest rates in Africa. The government has mortgaged a substantial portion of its oil earnings, contributing to a shortage of revenues. The 12 January 1994 devaluation of Franc Zone currencies by 50% resulted in inflation of 61% in 1994, but inflation has subsided since. Economic reform efforts continued with the support of international organizations, notably the World Bank and the IMF. The reform program came to a halt in June 1997 when civil war erupted. Denis SASSOU-NGUESSO, who returned to power when the war ended in October 1997, publicly expressed interest in moving forward on economic reforms and privatization and in renewing cooperation with international financial institutions. However, economic progress was badly hurt by slumping oil prices and the resumption of armed conflict in December 1998, which worsened the republic's budget deficit. Given a fragile peace, agreements with the IMF and the World Bank, and general international support for reconstruction and development, prospects for structural reform and 4% growth in 2002-03 appear strong.

Introduction

Background: Named after Captain Cook, who sighted them in 1770, the islands became a British protectorate in 1888. By 1900, administrative control was transferred to New Zealand; in 1965 residents chose self-government in free association with New Zealand. The emigration of skilled workers to New Zealand and government deficits are continuing problems.

Economy

Economy - overview: Like many other South Pacific island nations, the Cook Islands' economic development is hindered by the isolation of the country from foreign markets, the limited size of domestic markets, lack of natural resources, periodic devastation from natural disasters, and inadequate infrastructure. Agriculture provides the economic base with major exports made up of copra and citrus fruit. Manufacturing activities are limited to fruit processing, clothing, and handicrafts. Trade deficits are offset by remittances from emigrants and by foreign aid, overwhelmingly from New Zealand. In the 1980s and 1990s, the country lived beyond its means, maintaining a bloated public service and accumulating a large foreign debt. Subsequent reforms, including the sale of state assets, the strengthening of economic management, the encouragement of tourism, and a debt restructuring agreement, have rekindled investment and growth.

Costa Rica

Introduction

Background: Costa Rica is a Central American success story: since the late 19th century, only two brief periods of violence have marred its democratic development. Although still a largely agricultural country, it has expanded its economy to include strong technology and tourism sectors. The standard of living is relatively high. Land ownership is widespread.

Economy

Economy - overview: Costa Rica's basically stable economy depends on tourism, agriculture, and electronics exports. Poverty has been substantially reduced over the past 15 years, and a strong social safety net has been put into place. Foreign investors remain attracted by the country's political stability and high education levels, and tourism continues to bring in foreign exchange. However, traditional export sectors have not kept pace. Low coffee prices and an overabundance of bananas have hurt the agricultural sector. The government continues to grapple with its large deficit and massive internal debt and with the need to modernize the state-owned electricity and telecommunications sector.

Cote d'Ivoire

Introduction

Background: Close ties to France since independence in 1960, the development of cocoa production for export, and foreign investment made Cote d'Ivoire one of the most prosperous of the tropical African states. Falling cocoa prices and political turmoil, however, sparked an economic downturn in 1999 and 2000. On 25 December 1999, a military coup - the first ever in Cote d'Ivoire's history - overthrew the government led by President Henri Konan BEDIE. Presidential and legislative elections held in October and December 2000 provoked violence due to the exclusion of opposition leader Alassane OUATTARA. In October 2000, Laurent GBAGBO replaced junta leader Robert GUEI as president, ending 10 months of military rule. In October 2001, President GBAGBO initiated a two-month-long National Reconciliation Forum, but its ability to conciliate Ivoirians with one another remains unclear.

Economy

Economy - overview: Cote d'Ivoire is among the world's largest producers and exporters of coffee, cocoa beans, and palm oil. Consequently, the economy is highly sensitive to fluctuations in international prices for these products and to weather conditions. Despite government attempts to diversify the economy, it is still largely dependent on agriculture and related activities, which engage roughly 68% of the population. After several years of lagging performance, the Ivorian economy began a comeback in 1994, due to the 50% devaluation of the CFA franc and improved prices for cocoa and coffee, growth in nontraditional primary exports such as pineapples and rubber, limited trade and banking liberalization, offshore oil and gas discoveries, and generous external financing and debt rescheduling by multilateral lenders and France. Moreover, government adherence to donor-mandated reforms led to a jump in growth to 5% annually during 1996-99. Growth was negative in 2000 and 2001 because of the difficulty of meeting the conditions of international donors, continued low prices of key exports, and post-coup instability. Political instability continues to impede growth.

Croatia

Introduction

Background: In 1918, the Croats, Serbs, and Slovenes formed a kingdom known after 1929 as Yugoslavia. Following World War II, Yugoslavia became an independent communist state under the strong hand of Marshal TITO. Although Croatia declared its independence from Yugoslavia in 1991, it took four years of sporadic, but often bitter, fighting before occupying Serb armies were mostly cleared from Croatian lands. Under UN supervision the last Serb-held enclave in eastern Slavonia was returned to Croatia in 1998.

Economy

Economy - overview: Before the dissolution of Yugoslavia, the Republic of Croatia, after Slovenia, was the most prosperous and industrialized area, with a per capita output perhaps one-third above the Yugoslav average. The economy emerged from its mild recession in 2000 with tourism the main factor, but massive structural unemployment remains a key negative element. The government's failure to press the economic reforms needed to spur growth is largely the result of coalition politics and public resistance, particularly from the trade unions, to measures that would cut jobs, wages, or social benefits. As a result, the country is likely to experience only moderate growth without disciplined fiscal and structural reform. **GDP:** purchasing power parity - \$36.1 billion (2001 est.)

Transnational Issues

Disputes - International: Croatia and Bosnia and Herzegovina continue discussions on the disputed boundary in the Una River near Kostajnica, Hrvatska Dubica, and Zeljava; Bosnia and Herzegovina also protests Croatian claim to the tip of the Klek Peninsula and several islands near Neum; Hungary opposes Croatian plan to build a hydropower dam on the boundary stream Drava; Slovenia and Croatia have not obtained parliamentary ratification of 2001 land and maritime boundary treaty which cedes villages on the Dragonja River and Sveta Gera (Trdinov Peak) to Croatia, and most of Pirin Bay to Slovenia, but restricts Slovenian access to the open sea; Croatia and Yugoslavia continue to discuss disputed Prevlaka Peninsula and control over the Gulf of Kotor despite imminent UN intention to withdraw observer mission (UNMOP); Croatia and Italy are still trying to resolve bilateral property and ethnic minority rights dating from World War II

Illicit drugs: transit point along the Balkan route for Southwest Asian heroin to Western Europe; has been used as a transit point for maritime shipments of South American cocaine bound for Western Europe

Cuba

Introduction

Background: Fidel CASTRO led a rebel army to victory in 1959; his iron rule has held the country together since. Cuba's Communist revolution, with Soviet support, was exported throughout Latin America and Africa during the 1960s, 70s, and 80s. The country is now slowly recovering from a severe economic recession in 1990, following the withdrawal of former Soviet subsidies, worth \$4 billion to \$6 billion annually. Havana portrays its difficulties as the result of the US embargo in place since 1961. Illicit migration to the US - using homemade rafts, alien smugglers, or falsified visas - is a continuing problem. Some 3,000 Cubans attempted the crossing of the Straits of Florida in 2001; the US Coast Guard interdicted only about 25% of these.

Economy

Economy - overview: The government continues to balance the need for economic loosening against a concern for firm political control. It has undertaken limited reforms in recent years to stem excess liquidity, increase enterprise efficiency, and alleviate serious shortages of food, consumer goods, and services, but is unlikely to implement extensive changes. A major feature of the economy is the dichotomy between relatively efficient export enclaves and inefficient domestic sectors. The average Cuban's standard of living remains at a lower level than before the severe economic depression of the early 1990s, which was caused by the loss of Soviet aid and domestic inefficiencies. High oil prices, recessions in key export markets, and damage from Hurricane Michelle hampered growth in 2001. Cuba paid high prices for oil imports in the face of slumping prices in the key sugar and nickel industries and suffered a slowdown in tourist arrivals following September 11. The government subsequently depreciated the peso by approximately 30% and now aims for 3% growth in 2002.

Cyprus

Introduction

Background: Independence from the UK was approved in 1960 with constitutional guarantees by the Greek Cypriot majority to the Turkish Cypriot minority. In 1974, a Greek-sponsored attempt to seize the government was met by military intervention from Turkey, which soon controlled almost 40% of the island. In 1983, the Turkish-held area declared itself the "Turkish Republic of Northern Cyprus", but it is recognized only by Turkey. UN-led talks on the status of Cyprus resumed in December 1999 to prepare the ground for meaningful negotiations leading to a comprehensive settlement.

Economy

Economy - overview: Economic affairs are affected by the division of the country. The Greek Cypriot economy is prosperous but highly susceptible to external shocks. Erratic growth rates in the 1990s reflect the economy's vulnerability to swings in tourist arrivals, caused by political instability in the region and fluctuations in economic conditions in Western Europe. Economic policy is focused on meeting the criteria for admission to the EU. As in the Turkish sector, water shortages are a perennial problem; a few desalination plants are now online. The Turkish Cypriot economy has less than one-half the per capita GDP of the south. Because it is recognized only by Turkey, it has had much difficulty arranging foreign financing, and foreign firms have hesitated to invest there. It remains heavily dependent on agriculture and government service, which together employ about half of the work force. To compensate for the economy's weakness, Turkey provides substantial direct and indirect aid to tourism, education, industry, etc.

Illicit drugs: minor transit point for heroin and hashish via air routes and container traffic to Europe, especially from Lebanon and Turkey; some cocaine transits as well

Czech Republic

Introduction

Background: After World War II, Czechoslovakia fell within the Soviet sphere of influence. In 1968, an invasion by Warsaw Pact troops ended the efforts of the country's leaders to liberalize party rule and create "socialism with a human face." Anti-Soviet demonstrations the following year ushered in a period of harsh repression. With the collapse of Soviet authority in 1989, Czechoslovakia regained its freedom through a peaceful "Velvet Revolution." On 1 January 1993, the country underwent a "velvet divorce" into its two national components, the Czech Republic and Slovakia. Now a member of NATO, the Czech Republic has moved toward integration in world markets, a development that poses both opportunities and risks.

Economy

Economy - overview: Basically one of the most stable and prosperous of the post-Communist states, the Czech Republic has been recovering from recession since mid-1999. Growth in 2000-01 was led by exports to the EU, especially Germany, and foreign investment, while domestic demand is reviving. Uncomfortably high fiscal and current account deficits could be future problems. Unemployment is gradually declining as job creation continues in the rebounding economy; inflation is up to 4.7% but still moderate. The EU put the Czech Republic just behind Poland and Hungary in preparations for accession, which will give further impetus and direction to structural reform. Moves to complete banking, telecommunications, and energy privatization will add to foreign investment, while intensified restructuring among large enterprises and banks and improvements in the financial sector should strengthen output growth.

Illicit drugs: transshipment point for Southwest Asian heroin and minor transit point for Latin American cocaine to Western Europe; producer of synthetic drugs for local and regional markets

Denmark

Introduction

Background: Once the seat of Viking raiders and later a major north European power, Denmark has evolved into a modern, prosperous nation that is participating in the general political and economic integration of Europe. However, the country has opted out of European Union's Maastricht Treaty, the European monetary system (EMU), and issues concerning certain internal affairs.

Geography

Location: Northern Europe, bordering the Baltic Sea and the North Sea, on a peninsula north of Germany (Jutland); also includes two major islands (Sjælland and Fyn)

Economy

Economy - overview: This thoroughly modern market economy features high-tech agriculture, up-to-date small-scale and corporate industry, extensive government welfare measures, comfortable living standards, a stable currency, and high dependence on foreign trade. Denmark is a net exporter of food and energy and has a comfortable balance of payments surplus. The government has been successful in meeting, and even exceeding, the economic convergence criteria for participating in the third phase (a common European currency) of the European Monetary Union (EMU), but Denmark, in a September 2000 referendum, reconfirmed its decision not to join the 11 other EU members in the euro. Even so, the Danish currency remains pegged to the euro. **GDP:** purchasing power parity - \$149.8 billion (2001 est.)

Economy

Economy - overview: The economy is based on
service activities connected with the country's
strategic location and status as a free trade zone in
northeast Africa. Two-thirds of the inhabitants live in
the capital city, the remainder being mostly nomadic
herders. Scanty rainfall limits crop production to fruits
and vegetables, and most food must be imported.
Djibouti provides services as both a transit port for the
region and an international transshipment and
refueling center. It has few natural resources and little
industry. The nation is, therefore, heavily dependent
on foreign assistance to help support its balance of
payments and to finance development projects. An
unemployment rate of 50% continues to be a major
problem. Inflation is not a concern, however, because
of the fixed tie of the franc to the US dollar. Per capita
consumption dropped an estimated 35% over the last
seven years because of recession, civil war, and a
high population growth rate (including immigrants and
refugees). Faced with a multitude of economic
difficulties, the government has fallen in arrears on
long-term external debt and has been struggling to
meet the stipulations of foreign aid donors. Another
factor limiting growth is the negative impact on port
activity now that Ethiopia has more trade route
options.

Dominica

Introduction

Background: Dominica was the last of the Caribbean islands to be colonized by Europeans, due chiefly to the fierce resistance of the native Caribs. France ceded possession to Great Britain in 1763, which made the island a colony in 1805. In 1980, two years after independence, Dominica's fortunes improved when a corrupt and tyrannical administration was replaced by that of Mary Eugenia CHARLES, the first female prime minister in the Caribbean, who remained in office for 15 years.

Economy

Economy - overview: The Dominican economy depends on agriculture, primarily bananas, and remains highly vulnerable to climatic conditions. Hurricane Luis devastated the country's banana crop in 1995 after tropical storms wiped out a quarter of the 1994 crop. The subsequent recovery has been fueled by increases in construction, soap production, and tourist arrivals. Development of the tourism industry remains difficult however, because of the rugged coastline, lack of beaches, and the absence of an international airport. Economic growth is sluggish, and unemployment is greater than 20%. The government has been attempting to develop an offshore financial sector in order to diversify the island's production base.

Economy

Economy - overview: The Dominican economy experienced dramatic growth over the last decade, even though the economy was hit hard by Hurricane Georges in 1998. Although the country has long been viewed primarily as an exporter of sugar, coffee, and tobacco, in recent years the service sector has overtaken agriculture as the economy's largest employer, due to growth in tourism and free trade zones. The country suffers from marked income inequality; the poorest half of the population receives less than one-fifth of GNP, while the richest 10% enjoy 40% of national income. A US \$500 million foreign bond issue in September 2001 will contribute to increased public investment spending.

East Timor

Introduction

Background: The Portuguese colony of Timor declared itself independent from Portugal on 28 November 1975 and was invaded and occupied by Indonesian forces nine days later. It was subsequently incorporated into Indonesia in July 1976 as the province of Timor Timur. A so-called campaign of pacification followed, during which time an estimated 100,000 to 250,000 individuals lost their lives. On 30 August 1999, in a UN-supervised popular referendum, the people of Timor Timur voted for independence from Indonesia. On 20 May 2002, East Timor was internationally recognized as an independent state and the world's newest democracy.

Economy

Economy - overview: In late 1999, about 70% of the economic infrastructure of East Timor was laid waste by Indonesian troops and anti-independence militias, and 260,000 people fled westward. Over the next three years, however, a massive international program, manned by 5,000 peacekeepers (8,000 at peak) and 1,300 police officers, led to substantial reconstruction in both urban and rural areas. By mid-2002, all but about 50,000 of the refugees had returned. The country faces great challenges in

continuing the rebuilding of infrastructure and the strengthening of the infant civil administration. One promising long-term project would be development of oil resources in nearby waters.

Economy

Economy - overview: Ecuador has substantial oil resources and rich agricultural areas. Because the country exports primary products such as oil, bananas, and shrimp, fluctuations in world market prices can have a substantial domestic impact. Ecuador joined the World Trade Organization in 1996, but has failed to comply with many of its accession commitments. The aftermath of El Nino and depressed oil market of 1997-98 drove Ecuador's economy into a free-fall in 1999. The beginning of 1999 saw the banking sector collapse, which helped precipitate an unprecedented default on external loans later that year. Continued economic instability drove a 70% depreciation of the currency throughout 1999, which forced a desperate government to "dollarize" the currency regime in 2000. The move stabilized the currency, but did not stave off the ouster of the government. Gustavo NOBOA, who assumed the presidency in January 2000, has managed to pass substantial economic reforms and mend relations with international financial institutions. Ecuador completed its first standby agreement since 1986 when the IMF Board approved a 10 December 2001 disbursement of \$96 million, the final installment of a \$300 million standby credit agreement.

Egypt

Introduction

Background: Nominally independent from the UK in 1922, Egypt acquired full sovereignty following World War II. The completion of the Aswan High Dam in 1971 and the resultant Lake Nasser have altered the time-honored place of the Nile river in the agriculture and ecology of Egypt. A rapidly growing population (the largest in the Arab world), limited arable land, and dependence on the Nile all continue to overtax resources and stress society. The government has struggled to ready the economy for the new millennium through economic reform and massive investment in communications and physical infrastructure.

Geography

Location: Northern Africa, bordering the Mediterranean Sea, between Libya and the Gaza Strip

Geographic coordinates: 27 00 N, 30 00 E

Map references: Africa

Area:
 total: 1,001,450 sq km
 land: 995,450 sq km
 water: 6,000 sq km

Area - comparative: slightly more than three times the size of New Mexico

Land boundaries:
 total: 2,665 km
 border countries: Gaza Strip 11 km, Israel 266 km, Libya 1,115 km, Sudan 1,273 km

permanent crops: 0%

other: 97% (1998 est.)

Irrigated land: 33,000 sq km (1998 est.)

Natural hazards: periodic droughts; frequent earthquakes, flash floods, landslides; hot, driving windstorm called khamsin occurs in spring; dust storms, sandstorms

Environment - current issues: agricultural land being lost to urbanization and windblown sands; increasing soil salination below Aswan High Dam; desertification; oil pollution threatening coral reefs, beaches, and marine habitats; other water pollution from agricultural pesticides, raw sewage, and industrial effluents; very limited natural fresh water resources away from the Nile which is the only perennial water source; rapid growth in population overstraining the Nile and natural resources

Environment - international agreements:

party to: Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands
signed, but not ratified: Climate Change-Kyoto Protocol

Geography - note: controls Sinai Peninsula, only land bridge between Africa and remainder of Eastern Hemisphere; controls Suez Canal, shortest sea link between Indian Ocean and Mediterranean Sea; size, and juxtaposition to Israel, establish its major role in Middle Eastern geopolitics; dependence on upstream neighbors; dominance of Nile basin issues; prone to influxes of refugees

Economy

Economy - overview: Egypt improved its macroeconomic performance throughout most of the last decade by following IMF advice on fiscal, monetary, and structural reform policies. As a result, Cairo managed to tame inflation, slash budget deficits, and attract more foreign investment. In the past three years, however, the pace of reform has slackened, and excessive spending on national infrastructure projects has widened budget deficits again. Lower foreign exchange earnings since 1998 resulted in pressure on the Egyptian pound and periodic dollar shortages. Monetary pressures have increased since 11 September 2001 because of declines in tourism, Suez canal tolls, and exports, and Cairo has devalued the pound several times in the past year. The development of a gas export market is a major bright spot for future growth prospects.

Flag description: three equal horizontal bands of blue (top), white, and blue with the national coat of arms centered in the white band; the coat of arms features a round emblem encircled by the words REPUBLICA DE EL SALVADOR EN LA AMERICA CENTRAL; similar to the flag of Nicaragua, which has a different coat of arms centered in the white band - it features a triangle encircled by the words REPUBLICA DE NICARAGUA on top and AMERICA CENTRAL on the bottom; also similar to the flag of Honduras, which has five blue stars arranged in an X pattern centered in the white band

Economy

Economy - overview: El Salvador is a struggling Central American economy which has been suffering from a weak tax collection system, factory closings, the aftermaths of Hurricane Mitch of 1998 and the devastating earthquakes of early 2001, and weak world coffee prices. On the bright side, in recent years inflation has fallen to single digit levels, and total exports have grown substantially. The trade deficit has been offset by remittances (an estimated \$1.6 billion in 2000) from Salvadorans living abroad and by external aid. As of 1 January 2001, the US dollar was made legal tender alongside the colon. Growth in 2002 will depend largely on the speed of recovery in the US.

Transnational Issues

Disputes - international: El Salvador claims tiny Conejo Island off Honduras in the Golfo de Fonseca; many of the "bolsones" (disputed areas) along the El Salvador-Honduras boundary remain undemarcated despite ICJ adjudication in 1992; with respect to the maritime boundary in the Golfo de Fonseca, the ICJ referred to the line determined by the 1900 Honduras-Nicaragua Mixed Boundary Commission and advised that some tripartite resolution among El Salvador, Honduras, and Nicaragua likely would be required

Illicit drugs: transshipment point for cocaine; small amounts of marijuana produced for local consumption; domestic cocaine abuse on the rise

Equatorial Guinea

Introduction

Background: Composed of a mainland portion and five inhabited islands, Equatorial Guinea, which gained independence in 1968 after 190 years of Spanish rule, has been ruled by President OBIANG NGUEM MBASOGO since he seized power in a coup in 1979. Although nominally a constitutional democracy since 1991, the 1996 presidential and 1999 legislative elections were widely seen as being flawed.

Economy

Economy - overview: The discovery and exploitation of large oil reserves have contributed to dramatic economic growth in recent years. Forestry, farming, and fishing are also major components of GDP. Subsistence farming predominates. Although pre-independence Equatorial Guinea counted on cocoa production for hard currency earnings, the neglect of the rural economy under successive regimes has diminished potential for agriculture-led growth (the government has stated its intention to reinvest some oil revenue into agriculture). A number of aid programs sponsored by the World Bank and the IMF have been cut off since 1993 because of corruption and mismanagement. No longer eligible for concessional financing because of large oil revenues, the government has been unsuccessfully trying to agree on a "shadow" fiscal management program with the World Bank and IMF. Businesses, for the most part, are owned by government officials and their family members. Undeveloped natural resources include titanium, iron ore, manganese, uranium, and alluvial gold. Boosts in production and higher world oil prices stimulated growth in 2002, with oil accounting for 90% of increased exports.

Eritrea

Introduction

Background: Eritrea was awarded to Ethiopia in 1952 as part of a federation. Ethiopia's annexation of Eritrea as a province 10 years later sparked a 30-year struggle for independence that ended in 1991 with Eritrean rebels defeating governmental forces; independence was overwhelmingly approved in a 1993 referendum. A two and a half year border war with Ethiopia that erupted in 1998 ended under UN auspices on 12 December 2000. Eritrea currently hosts a UN peacekeeping operation that will monitor the border region until an international commission determines and demarcates the boundary between the two countries.

Government type: transitional government

note: following a successful referendum on independence for the Autonomous Region of Eritrea on 23-25 April 1993, a National Assembly, composed entirely of the People's Front for Democracy and Justice or PFDJ, was established as a transitional legislature; a Constitutional Commission was also established to draft a constitution; Afeworki ISAIAS was elected president by the transitional legislature; the constitution, ratified in May 1997, did not enter into effect, pending parliamentary and presidential elections; parliamentary elections had been scheduled to take place in December 2001, but were postponed; currently the sole legal party is the People's Front for Democracy and Justice (PFDJ), though a draft political parties law is under consideration

Capital: Asmara (formerly Asmera)

Administrative divisions: 6 regions (regions, singular - region); Central, Anelba, Southern Red Sea, Northern Red Sea, Southern, Gash-Barka

Independence: 24 May 1993 (from Ethiopia)

National holiday: Independence Day, 24 May (1993)

Constitution: the transitional constitution, decreed on 19 May 1993, was replaced by a new constitution adopted on 23 May 1997, but not yet implemented

Legal system: primary basis is the Ethiopian legal code of 1957, with revisions; new civil, commercial, and penal codes have not yet been promulgated; also relies on customary and post-independence-enacted laws and, for civil cases involving Muslims, Sharia law

Suffrage: 18 years of age; universal

Executive branch:

chief of state: President Afeworki ISAIAS (since 8 June 1993); *note* - the president is both the chief of state and head of government and is head of the State Council and National Assembly

Economy

Economy - overview: Since independence from Ethiopia on 24 May 1993, Eritrea has faced the economic problems of a small, desperately poor country. Like the economies of many African nations, the economy is largely based on subsistence agriculture, with 80% of the population involved in farming and herding. The Ethiopian-Eritrea war in 1998-2000 severely hurt Eritrea's economy. GDP growth in 1999 fell to less than 1%, and GDP decreased by 8.2% in 2000. The May 2000 Ethiopian offensive into northern Eritrea caused some \$600 million in property damage and loss, including losses of \$225 million in livestock and 55,000 homes. The attack prevented planting of crops in Eritrea's most productive region, causing food production to drop by 62%. Even during the war, Eritrea developed its transportation infrastructure, asphaltting new roads, improving its ports, and repairing war damaged roads and bridges. Eritrea's economic future remains mixed. The cessation of Ethiopian trade, which mainly used Eritrean ports before the war, leaves Eritrea with a large economic hole to fill. Eritrea's economic future depends upon its ability to master fundamental social problems like illiteracy, unemployment, and low skills, and to convert the diaspora's money and expertise into economic growth.

Estonia

Introduction

Background: After centuries of Danish, Swedish, German, and Russian rule, Estonia attained independence in 1918. Forcibly incorporated into the USSR in 1940, it regained its freedom in 1991 with the collapse of the Soviet Union. Since the last Russian troops left in 1994, Estonia has been free to promote economic and political ties with Western Europe.

Ethiopia

Introduction

Background: Unique among African countries, the ancient Ethiopian monarchy maintained its freedom from colonial rule, one exception being the Italian occupation of 1936-41. In 1974 a military junta, the Derg, deposed Emperor Haile SELASSIE (who had ruled since 1930) and established a socialist state. Torn by bloody coups, uprisings, wide-scale drought, and massive refugee problems, the regime was finally toppled by a coalition of rebel forces, the Ethiopian People's Revolutionary Democratic Front (EPRDF), in 1991. A constitution was adopted in 1994 and Ethiopia's first multiparty elections were held in 1995. A two and a half year border war with Eritrea ended with a peace treaty on 12 December 2000.

Flag description: three equal horizontal bands of green (top), yellow, and red with a yellow pentagram and single yellow rays emanating from the angles between the points on a light blue disk centered on the three bands; Ethiopia is the oldest independent country in Africa, and the three main colors of her flag were so often adopted by other African countries upon independence that they became known as the pan-African colors

Economy

Economy - overview: Ethiopia's poverty-stricken economy is based on agriculture, which accounts for half of GDP, 85% of exports, and 80% of total employment. The agricultural sector suffers from frequent drought and poor cultivation practices, and as many as 4.6 million people need food assistance annually. Coffee is critical to the Ethiopian economy with exports of some \$260 million in 2000. Other important exports include qat, live animals, hides, and gold. The war with Eritrea in 1999-2000 and recurrent drought have buffeted the economy, in particular coffee production. In November 2001 Ethiopia qualified for debt relief from the Highly Indebted Poor Countries (HIPC) initiative. Under Ethiopia's land tenure system, the government owns all land and provides long-term leases to the tenants; the system continues to hamper growth in the industrial sector as entrepreneurs are unable to use land as collateral for loans. Despite this limitation, strong growth is expected to continue in the near term as good rainfall, the cessation of hostilities, and renewed foreign aid and debt relief push the economy forward.

Transnational Issues

Disputes - international: most of the southern half of the boundary with Somalia in the Ogaden region is a provisional administrative line; in the Ogaden, regional states have established a variety of conflicting relationships with the Somali Transitional National Government in Mogadishu, feuding factions in Puntland region, and the economically stable break-away "Somaliland" region; Ethiopia agreed in 2002 to demarcate its entire boundary with Sudan; Eritrea and Ethiopia have expressed general approval of the April 2002 arbitration commission ruling re-delimiting the boundary, the focus of their 1998-2000 war; United Nations Mission in Ethiopia and Eritrea (UNMEE) will monitor activities within the 25-km wide temporary security zone in Eritrea until demarcation and de-mining are complete

Illicit drugs: transit hub for heroin originating in Southwest and Southeast Asia and destined for Europe and North America as well as cocaine destined for markets in southern Africa; cultivates qat (khat) for local use and regional export, principally to Djibouti and Somalia (legal in all three countries)

Falkland Islands (Islas Malvinas)

(overseas territory of the UK;
also claimed by Argentina)

Introduction

Background: Although first sighted by an English navigator in 1592, the first landing (English) did not occur until almost a century later in 1690, and the first settlement (French) was not established until 1764. The colony was turned over to Spain two years later and the islands have since been the subject of a territorial dispute, first between Britain and Spain, then between Britain and Argentina. The UK asserted its claim to the islands by establishing a naval garrison there in 1833. Argentina invaded the islands on 2 April 1982. The British responded with an expeditionary force that landed seven weeks later and after fierce fighting forced Argentine surrender on 14 June 1982.

Economy

Economy - overview: The economy was formerly based on agriculture, mainly sheep farming, but today fishing contributes the bulk of economic activity. In 1987 the government began selling fishing licenses to foreign trawlers operating within the Falklands exclusive fishing zone. These license fees total more than \$40 million per year, which goes to support the island's health, education, and welfare system. Squid

accounts for 75% of the fish taken. Dairy farming supports domestic consumption; crops furnish winter fodder. Exports feature shipments of high-grade wool to the UK and the sale of postage stamps and coins. The islands are now self-financing except for defense. The British Geological Survey announced a 200-mile oil exploration zone around the islands in 1993, and early seismic surveys suggest substantial reserves capable of producing 500,000 barrels per day; to date no exploitable site has been identified. An agreement between Argentina and the UK in 1995 seeks to defuse licensing and sovereignty conflicts that would dampen foreign interest in exploiting potential oil reserves. Tourism is increasing rapidly, with about 30,000 visitors in 2001. The second largest source of income is interest paid on money the government has in the bank. The British military presence also provides a sizeable economic boost.

Economy

Economy - overview: The Faroese economy has had a strong performance since 1994, mostly as a result of increasing fish landings and high and stable export prices. Unemployment is falling and there are signs of labor shortages in several sectors. The positive economic development has helped the Faroese Home Rule Government produce increasing budget surpluses which in turn help to reduce the large public debt, most of it owed to Denmark. However, the total dependence on fishing makes the Faroese economy extremely vulnerable, and the present fishing efforts appear in excess of what is a sustainable level of fishing in the long term. Oil finds close to the Faroese area give hope for deposits in the immediate Faroese area, which may eventually lay the basis for a more diversified economy and thus lessen dependence on Denmark and Danish economic assistance. Aided by a substantial annual subsidy (15% of GDP) from Denmark, the Faroese have a standard of living not far below the Danes and other Scandinavians.

Fiji

Introduction

Background: Fiji became independent in 1970, after nearly a century as a British colony. Democratic rule was interrupted by two military coups in 1987, caused by concern over a government perceived as dominated by the Indian community (descendants of contract laborers brought to the islands by the British in the 19th century). A 1990 constitution favored native Melanesian control of Fiji, but led to heavy Indian emigration; the population loss resulted in economic difficulties, but ensured that Melanesians became the majority. Amendments enacted in 1997 made the constitution more equitable. Free and peaceful elections in 1999 resulted in a government led by an Indo-Fijian, but a coup in May of 2000 ushered in a prolonged period of political turmoil. Parliamentary elections held in August 2001 provided Fiji with a democratically elected government and gave a mandate to the government of Prime Minister Laisenia QARASE.

Economy

Economy - overview: Fiji, endowed with forest, mineral, and fish resources, is one of the most developed of the Pacific island economies, though still with a large subsistence sector. Sugar exports and a growing tourist industry - with 300,000 to 400,000 tourists annually - are the major sources of foreign exchange. Sugar processing makes up one-third of industrial activity. Long-term problems include low investment and uncertain property rights. The political turmoil in Fiji has had a severe impact with the economy shrinking by 2.8% in 2000 and growing by only 1% in 2001. The Fiji Visitor's Bureau expects visitor arrivals to reach pre-coup levels during 2002. The government's ability to manage its budget - which is expected to run a net deficit of 6% in 2002 - will depend upon a return of political stability and investor confidence.

Finland

Introduction

Background: Ruled by Sweden from the 12th to the 19th centuries and by Russia from 1809, Finland finally won its independence in 1917. During World War II, it was able to successfully defend its freedom and fend off invasions by the Soviet Union and Germany. In the subsequent half century, the Finns have made a remarkable transformation from a farm/forest economy to a diversified modern industrial economy; per capita income is now on par with Western Europe. As a member of the European Union, Finland was the only Nordic state to join the euro system at its initiation in January 1999.

Economy

Economy - overview: Finland has a highly industrialized, largely free-market economy, with per capita output roughly that of the UK, France, Germany, and Italy. Its key economic sector is manufacturing - principally the wood, metals, engineering, telecommunications, and electronics industries. Trade is important, with exports equaling almost one-third of GDP. Except for timber and several minerals, Finland depends on imports of raw materials, energy, and some components for manufactured goods. Because of the climate, agricultural development is limited to maintaining self-sufficiency in basic products. Forestry, an important export earner, provides a secondary occupation for the rural population. Rapidly increasing integration with Western Europe - Finland was one of the 11 countries joining the euro monetary system (EMU) on 1 January 1999 - will dominate the economic picture over the next several years. Growth in 2001 was held back by the global slowdown and will likely be anemic again in 2002.

France

Introduction

Background: Although ultimately a victor in World Wars I and II, France suffered extensive losses in its empire, wealth, manpower, and rank as a dominant nation-state. Nevertheless, France today is one of the most modern countries in the world and is a leader among European nations. Since 1958, it has constructed a presidential democracy resistant to the instabilities experienced in earlier parliamentary democracies. In recent years, its reconciliation and cooperation with Germany have proved central to the economic integration of Europe, including the advent of the euro in January 1999. Presently, France is at the forefront of European states seeking to exploit the momentum of monetary union to advance the creation of a more unified and capable European defense and security apparatus.

Economy

Economy - overview: France is in the midst of transition, from a well-to-do modern economy that featured extensive government ownership and intervention to one that relies more on market mechanisms. The Socialist-led government has partially or fully privatized many large companies, banks, and insurers, but still retains large stakes in several leading firms, including Air France, France Telecom, Renault, and Thales, and remains dominant in some sectors, particularly power, public transport, and defense industries. The telecommunications sector is gradually being opened to competition. France's leaders remain committed to a capitalism in which they maintain social equity by means of laws, tax policies, and social spending that reduce income disparity and the impact of free markets on public health and welfare. The current government has lowered income taxes and introduced measures to boost employment, but has done little to reform an overly expensive pension system, rigid labor market, and restrictive bureaucracy that discourage hiring and make the tax burden one of the highest in Europe. In addition to the tax burden, the reduction of the workweek to 35 hours, which is to be extended to small firms in 2002, has drawn criticism for lowering the competitiveness of French businesses. The current economic slowdown has thrown the government's goal of balancing the budget by 2004 off track.

Economy

Economy - overview: The economy is tied closely to the French economy through subsidies and imports. Besides the French space center at Kourou, fishing and forestry are the most important economic activities. Forest and woodland cover 90% of the country. The large reserves of tropical hardwoods, not fully exploited, support an expanding sawmill industry that provides sawn logs for export. Cultivation of crops is limited to the coastal area, where the population is largely concentrated; rice and manioc are the major crops. French Guiana is heavily dependent on imports of food and energy. Unemployment is a serious problem, particularly among younger workers.

Economy

Economy - overview: Since 1962, when France stationed military personnel in the region, French Polynesia has changed from a subsistence economy to one in which a high proportion of the work force is either employed by the military or supports the tourist industry. With the halt of French nuclear testing in 1996, the military contribution to the economy fell sharply. Tourism accounts for about one-fourth of GDP and is a primary source of hard currency earnings. Other sources of income are pearl farming and deep-sea commercial fishing. The small manufacturing sector primarily processes agricultural products. The territory substantially benefits from development agreements with France aimed principally at creating new businesses and strengthening social services.

French Southern and Antarctic Lands

(overseas territory of France)

Introduction

Background: The Southern Lands consist of two archipelagos, Iles Crozet and Iles Kerguelen, and two volcanic islands, Ile Amsterdam and Ile Saint-Paul. They contain no permanent inhabitants and are visited only by researchers studying the native fauna. The Antarctic portion consists of "Adelie Land," a thin slice of the Antarctic continent discovered and claimed by the French in 1840.

Geography

Location: south of Africa, islands in the southern Indian Ocean, about equidistant between Africa, Antarctica, and Australia; note - French Southern and Antarctic Lands include Ile Amsterdam, Ile Saint-Paul, Iles Crozet, and Iles Kerguelen in the southern Indian Ocean, along with the French-claimed sector of Antarctica, "Adelie Land"; the US does not recognize the French claim to "Adelie Land"

Geographic coordinates: 43 00 S, 67 00 E

Map references: Antarctic Region

Area:

total: 7,781 sq km

land: 7,781 sq km

water: 0 sq km

note: includes Ile Amsterdam, Ile Saint-Paul, Iles Crozet and Iles Kerguelen; excludes "Adelie Land" claim of about 500,000 sq km in Antarctica that is not recognized by the US

Area - comparative: slightly less than 1.3 times the size of Delaware

Land boundaries: 0 km

Gabon

Introduction

Background: Ruled by autocratic presidents since independence from France in 1960, Gabon introduced a multiparty system and a new constitution in the early 1990s that allowed for a more transparent electoral process and for reforms of governmental institutions. A small population, abundant natural resources, and considerable foreign support have helped make Gabon one of the more prosperous black African countries.

Economy

Economy - overview: Gabon enjoys a per capita income four times that of most nations of sub-Saharan Africa. This has supported a sharp decline in extreme poverty; yet because of high income inequality a large proportion of the population remains poor. Gabon depended on timber and manganese until oil was discovered offshore in the early 1970s. The oil sector now accounts for 50% of GDP. Gabon continues to face fluctuating prices for its oil, timber, and manganese exports. Despite the abundance of natural wealth, the economy is hobbled by poor fiscal management. In 1992, the fiscal deficit widened to 2.4% of GDP, and Gabon failed to settle arrears on its bilateral debt, leading to a cancellation of rescheduling agreements with official and private creditors. Devaluation of its Francophone currency by 50% on 12 January 1994 sparked a one-time inflationary surge, to 35%; the rate dropped to 6% in 1996. The IMF provided a one-year standby arrangement in 1994-95, a three-year Enhanced Financing Facility (EFF) at near commercial rates beginning in late 1995, and stand-by credit of \$119 million in October 2000. Those agreements mandate progress in privatization and fiscal discipline. France provided additional financial support in January 1997 after Gabon had met IMF targets for mid-1996. In 1997, an IMF mission to Gabon criticized the government for overspending on off-budget items, overborrowing from the central bank, and slipping on its schedule for privatization and administrative reform. The rebound of oil prices in 1999-2000 helped growth, but drops in production hampered Gabon from fully realizing potential gains. In December 2000, Gabon signed a new agreement with the Paris Club to reschedule its official debt. A follow-up bilateral repayment agreement with the US was signed in December 2001.

Gambia, The

Introduction

Background: The Gambia gained its independence from the UK in 1965; it formed a short-lived federation of Senegambia with Senegal between 1982 and 1989. In 1991 the two nations signed a friendship and cooperation treaty. A military coup in 1994 overthrew the president and banned political activity, but a new 1996 constitution and presidential elections, followed by parliamentary balloting in 1997, completed a nominal return to civilian rule. The country undertook another round of presidential and legislative elections in late 2001 and early 2002.

Economy

Economy - overview: The Gambia has no important mineral or other natural resources and has a limited agricultural base. About 75% of the population depends on crops and livestock for its livelihood. Small-scale manufacturing activity features the processing of peanuts, fish, and hides. Reexport trade normally constitutes a major segment of economic activity, but a 1999 government-imposed preshipment inspection plan, and instability of the Gambian dalasi (currency) have drawn some of the reexport trade away from Banjul. The government's 1998 seizure of

the private peanut firm Alimenta eliminated the largest purchaser of Gambian groundnuts; the following two marketing seasons have seen substantially lower prices and sales. A decline in tourism in 2000 has also held back growth. Unemployment and underemployment rates are extremely high. Shortrun economic progress remains highly dependent on sustained bilateral and multilateral aid, on responsible government economic management as forwarded by IMF technical help and advice, and on expected growth in the construction sector. Record crops undergirded sturdy growth in 2001.

Gaza Strip

Introduction

Background: The Israel-PLO Declaration of Principles on Interim Self-Government Arrangements (the DOP), signed in Washington on 13 September 1993, provided for a transitional period not exceeding five years of Palestinian interim self-government in the Gaza Strip and the West Bank. Under the DOP, Israel agreed to transfer certain powers and responsibilities to the Palestinian Authority, which includes the Palestinian Legislative Council elected in January 1996, as part of the interim self-governing arrangements in the West Bank and Gaza Strip. A transfer of powers and responsibilities for the Gaza Strip and Jericho took place pursuant to the Israel-PLO 4 May 1994 Cairo Agreement on the Gaza Strip and the Jericho Area and in additional areas of the West Bank pursuant to the Israel-PLO 28 September 1995 Interim Agreement, the Israel-PLO 15 January 1997 Protocol Concerning Redeployment in Hebron, the Israel-PLO 23 October 1998 Wye River Memorandum, and the 4 September 1999 Sharm el-Sheikh Agreement. The DOP provides that Israel will retain responsibility during the transitional period for external security and for internal security and public order of settlements and Israeli citizens. Direct negotiations to determine the permanent status of Gaza and West Bank had begun in September 1999 after a three-year hiatus, but have been derailed by a second intifadah that broke out in September 2000. The resulting widespread violence in the West Bank and Gaza Strip, Israel's military response, and instability within the Palestinian Authority continue to undermine progress toward a permanent agreement.

Economy

Economy - overview: Economic output in the Gaza Strip - under the responsibility of the Palestinian Authority since the Cairo Agreement of May 1994 - declined by about one-third between 1992 and 1996. The downturn was largely the result of Israeli closure policies - the imposition of generalized border closures in response to security incidents in Israel - which disrupted previously established labor and commodity market relationships between Israel and the WBGs (West Bank and Gaza Strip). The most serious negative social effect of this downturn was the emergence of high unemployment; unemployment in the WBGs during the 1980s was generally under 5%; by 1995 it had risen to over 20%. Israel's use of comprehensive closures decreased during the next few years and, in 1998, Israel implemented new policies to reduce the impact of closures and other security procedures on the movement of Palestinian goods and labor. These changes fueled an almost three-year-long economic recovery in the West Bank and Gaza Strip; real GDP grew by 5% in 1998 and 6% in 1999. Recovery was upended in the last quarter of 2000 with the outbreak of Palestinian violence, triggering tight Israeli closures of Palestinian self-rule areas and a severe disruption of trade and labor movements. In 2001, and even more severely in early 2002, internal turmoil and Israeli military measures in Palestinian Authority areas resulted in the destruction of capital plant and administrative structure, widespread business closures, and a sharp drop in GDP. Another major loss has been the decline in income earned by Palestinian workers in Israel.

Georgia

Introduction

Background: Georgia was absorbed into the Russian Empire in the 19th century. Independent for three years (1918-1921) following the Russian revolution, it was forcibly incorporated into the USSR until the Soviet Union dissolved in 1991. Ethnic separation in Abkhazia and South Ossetia, poor governance, and Russian military bases deny the government effective control over the entirety of the state's internationally recognized territory. Despite myriad problems, progress on market reforms and democratization support the country's goal of greater integration with Western political, economic and security institutions.

Economy

Economy - overview: Georgia's main economic activities include the cultivation of agricultural products such as citrus fruits, tea, hazelnuts, and grapes; mining of manganese and copper; and output of a small industrial sector producing alcoholic and nonalcoholic beverages, metals, machinery, and chemicals. The country imports the bulk of its energy needs, including natural gas and oil products. Its only sizable internal energy resource is hydropower.

Despite the severe damage the economy has suffered due to civil strife, Georgia, with the help of the IMF and World Bank, has made substantial economic gains since 1995, achieving positive GDP growth and curtailing inflation. However, the Georgian government suffers from limited resources due to a chronic failure to collect tax revenues. Georgia also suffers from energy shortages; it privatized the T'bilisi distribution network in 1998, but collection rates are low, making the venture unprofitable. The country is pinning its hopes for long-term recovery on its role as a transit state for pipelines and trade. The start of construction on the Baku-T'bilisi-Ceyhan pipeline in summer 2002 will bring much-needed investment and job opportunities to the country.

Germany

Introduction

Background: As Europe's largest economy and most populous nation, Germany remains a key member of the continent's economic, political, and defense organizations. European power struggles immersed the country in two devastating World Wars in the first half of the 20th century and left the country occupied by the victorious Allied powers of the US, UK, France, and the Soviet Union in 1945. With the advent of the Cold War, two German states were formed in 1949: the western Federal Republic of Germany (FRG) and the eastern German Democratic Republic (GDR). The democratic FRG embedded itself in key Western economic and security organizations, the EC, which became the EU, and NATO, while the communist GDR was on the front line of the Soviet-led Warsaw Pact. The decline of the USSR and the end of the Cold War allowed for German unification in 1990. Since then Germany has expended considerable funds to bring eastern productivity and wages up to western standards. In January 2002, Germany and 11 other EU countries introduced a common European currency, the euro.

Economy

Economy - overview: Germany's affluent and technologically powerful economy turned in a relatively weak performance throughout much of the 1990s. The modernization and integration of the eastern German economy continues to be a costly long-term problem, with annual transfers from west to east amounting to roughly \$70 billion. Germany's ageing population, combined with high unemployment, has pushed social security outlays to a level exceeding contributions from workers. Structural rigidities in the labor market - including strict regulations on laying off workers and the setting of wages on a national basis - have made unemployment a chronic problem. Business and

income tax cuts introduced in 2001 did not spare Germany from the impact of the downturn in international trade, and domestic demand faltered as unemployment began to rise. The government expects growth to gain pace in the second half of 2002, but to fall short of 1% for the year again. Corporate restructuring and growing capital markets are setting the foundations that could allow Germany to meet the long-term challenges of European economic integration and globalization, particularly if labor market rigidities are addressed.

Ghana

Introduction

Background: Formed from the merger of the British colony of the Gold Coast and the Togoland trust territory, Ghana in 1957 became the first country in colonial Africa to gain its independence. A long series of coups resulted in the suspension of the constitution in 1981 and the banning of political parties. A new constitution, restoring multiparty politics, was approved in 1992. Lt. Jerry RAWLINGS, head of state since 1981, won presidential elections in 1992 and 1996, but was constitutionally prevented from running for a third term in 2000. He was succeeded by John KUFUOR.

Economy

Economy - overview: Well endowed with natural resources, Ghana has roughly twice the per capita output of the poorer countries in West Africa. Even so, Ghana remains heavily dependent on international financial and technical assistance. Gold, timber, and cocoa production are major sources of foreign exchange. The domestic economy continues to

revolve around subsistence agriculture, which accounts for 36% of GDP and employs 60% of the work force, mainly small landholders. Excessively expansionary monetary and fiscal policy prior to the 2000 elections led to accelerating inflation in early 2001. A depressed cocoa market and continued weak growth in non-traditional exports led to disappointing growth in 2001. Ghana opted for debt relief under the Heavily Indebted Poor Country (HIPC) program in 2002.

Gibraltar

(overseas territory of the UK)

Introduction

Background: Strategically important, Gibraltar was ceded to Great Britain by Spain in the 1713 Treaty of Utrecht; the British garrison was formally declared a colony in 1830. In a 1967 referendum, Gibraltarians ignored Spanish pressure and voted overwhelmingly to remain a British dependency. Spain and the UK are discussing the issue of Gibraltar and have set the goal of reaching an agreement by mid-2002.

Economy

Economy - overview: Gibraltar benefits from an extensive shipping trade, offshore banking, and its position as an international conference center. The British military presence has been sharply reduced and now contributes about 11% to the local economy. The financial sector accounts for 20% of GDP; tourism (almost 6 million visitors in 1998), shipping services fees, and duties on consumer goods also generate revenue. In recent years, Gibraltar has seen major

Greece

Introduction

Background: Greece achieved its independence from the Ottoman Empire in 1829. During the second half of the 19th century and the first half of the 20th century, it gradually added neighboring islands and territories with Greek-speaking populations. Following the defeat of Communist rebels in 1949, Greece joined NATO in 1952. A military dictatorship, which in 1967 suspended many political liberties and forced the king to flee the country, lasted seven years. Democratic elections in 1974 and a referendum created a parliamentary republic and abolished the monarchy; Greece joined the European Community or EC in 1981 (which became the EU in 1992).

Economy

Economy - overview: Greece has a mixed capitalist economy with the public sector accounting for about half of GDP. Tourism is a key industry, providing a large portion of GDP and foreign exchange earnings. Greece is a major beneficiary of EU aid, equal to about 3.3% of GDP. The economy has improved steadily over the last few years, as the government tightened policy in the run-up to Greece's entry into the EU's Economic and Monetary Union (EMU) on 1 January 2001. Major challenges remaining include the reduction of unemployment and further restructuring of the economy, including privatizing several state enterprises, undertaking social security reforms, overhauling the tax system, and minimizing bureaucratic inefficiencies. Economic growth is forecast at 3%-3.5% in 2002.

Economy

Economy - overview: The economy remains critically dependent on exports of fish and substantial support from the Danish Government, which supplies about half of government revenues. The public sector, including publicly owned enterprises and the municipalities, plays the dominant role in the economy. Despite several interesting hydrocarbon and minerals exploration activities, it will take several years before production can materialize. Tourism is the only sector offering any near-term potential, and even this is limited due to a short season and high costs.

Grenada

Introduction

Background: One of the smallest independent countries in the western hemisphere, Grenada was seized by a Marxist military council on 19 October 1983. Six days later the island was invaded by US forces and those of six other Caribbean nations, which quickly captured the ringleaders and their hundreds of Cuban advisers. Free elections were reinstituted the following year.

Flag description: a rectangle divided diagonally into yellow triangles (top and bottom) and green triangles (hoist side and outer side), with a red border around the flag; there are seven yellow, five-pointed stars with three centered in the top red border, three centered in the bottom red border, and one on a red disk superimposed at the center of the flag; there is also a symbolic nutmeg pod on the hoist-side triangle (Grenada is the world's second-largest producer of nutmeg, after Indonesia); the seven stars represent the seven administrative divisions

Economy

Economy - overview: Despite government steadying of annual economic growth in recent years through progress in fiscal reform and prudent macroeconomic management, a downturn in tourist arrivals in 2001 threatens government spending in 2002. Grenada relies on tourism as its main source of foreign exchange, although it also supports a small agriculture sector and a developing offshore financial industry. Short-term concerns include a rising fiscal deficit and the deterioration in the external account balance.

Economy

Economy - overview: The economy depends on agriculture, tourism, light industry, and services. It also depends on France for large subsidies and imports. Tourism is a key industry, with most tourists from the US; an increasingly large number of cruise ships visit the islands. The traditional sugarcane crop is slowly being replaced by other crops, such as bananas (which now supply about 50% of export earnings), eggplant, and flowers. Other vegetables and root crops are cultivated for local consumption, although Guadeloupe is still dependent on imported food, mainly from France. Light industry features sugar and rum production. Most manufactured goods and fuel are imported. Unemployment is especially high among the young. Hurricanes periodically devastate the economy.

Economy

Economy - overview: The economy depends on US military spending, tourism, and the export of fish and handicrafts. Total US grants, wage payments, and procurement outlays amounted to \$1 billion in 1998. Over the past 20 years, the tourist industry has grown rapidly, creating a construction boom for new hotels and the expansion of older ones. More than 1 million tourists visit Guam each year. The industry has recently suffered setbacks because of the continuing Japanese slowdown; the Japanese normally make up almost 90% of the tourists. Most food and industrial goods are imported. Guam faces the problem of building up the civilian economic sector to offset the impact of military downsizing.

Guatemala

Introduction

Background: Guatemala was freed of Spanish colonial rule in 1821. During the second half of the 20th century, it experienced a variety of military and civilian governments as well as a 36-year guerrilla war. In 1996, the government signed a peace agreement formally ending the conflict, which had led to the death of more than 100,000 people and had created some 1 million refugees.

Economy

Economy - overview: The agricultural sector accounts for about one-fourth of GDP, two-thirds of exports, and half of the labor force. Coffee, sugar, and bananas are the main products. Former President ARZU (1996-2000) worked to implement a program of economic liberalization and political modernization. The 1996 signing of the peace accords, which ended 36 years of civil war, removed a major obstacle to foreign investment. In 1998, Hurricane Mitch caused relatively little damage to Guatemala compared to its neighbors. Ongoing challenges include increasing government revenues, negotiating further assistance from international donors, and increasing the efficiency and openness of both government and private financial operations. Despite low international prices for Guatemala's main commodities, the economy grew by 3% in 2000 and 2.3% in 2001. Guatemala, along with Honduras and El Salvador, recently concluded a free trade agreement with Mexico and has moved to protect international property rights. However, the PORTILLO administration has undertaken a review of privatizations under the previous administration, thereby creating some uncertainty among investors.

Economy

Economy - overview: Financial services - banking, fund management, insurance, etc. - account for about 55% of total income in this tiny Channel Island economy. Tourism, manufacturing, and horticulture, mainly tomatoes and cut flowers, have been declining. Light tax and death duties make Guernsey a popular tax haven. The evolving economic integration of the EU nations is changing the rules of the game under which Guernsey operates.

Guinea

Introduction

Background: Independent from France since 1958, Guinea did not hold democratic elections until 1993 when Gen. Lansana CONTE (head of the military government) was elected president of the civilian government. He was reelected in 1998. Unrest in Sierra Leone has spilled over into Guinea, threatening stability and creating a humanitarian emergency.

Economy

Economy - overview: Guinea possesses major mineral, hydropower, and agricultural resources, yet remains an underdeveloped nation. The country possesses over 30% of the world's bauxite reserves and is the second largest bauxite producer. The mining sector accounted for about 75% of exports in 1999. Long-run improvements in government fiscal arrangements, literacy, and the legal framework are needed if the country is to move out of poverty. The government made encouraging progress in budget management in 1997-99, and reform progress was praised in the World Bank/IMF October 2000

assessment. However, escalating fighting along the Sierra Leonean and Liberian borders has caused major economic disruptions. In addition to direct defense costs, the violence has led to a sharp decline in investor confidence. Foreign mining companies have reduced expatriate staff, while panic buying has created food shortages and inflation in local markets. Multilateral aid - including Heavily Indebted Poor Countries (HIPC) debt relief - and single digit inflation should permit 5% growth in 2002.

Guinea-Bissau

Introduction

Background: In 1994, 20 years after independence from Portugal, the country's first multiparty legislative and presidential elections were held. An army uprising that triggered a bloody civil war in 1998, created hundreds of thousands of displaced persons. The president was ousted by a military junta in May 1999. An interim government turned over power in February 2000 when opposition leader Kumba YALA took office following two rounds of transparent presidential elections. Guinea-Bissau's transition back to democracy will be complicated by its crippled economy devastated in the civil war.

Economy

Economy - overview: One of the 10 poorest countries in the world, Guinea-Bissau depends mainly on farming and fishing. Cashew crops have increased remarkably in recent years, and the country now ranks sixth in cashew production. Guinea-Bissau exports fish and seafood along with small amounts of peanuts, palm kernels, and timber. Rice is the major crop and staple food. However, intermittent fighting between Senegalese-backed government troops and a military junta destroyed much of the country's infrastructure and caused widespread damage to the economy in 1998; the civil war led to a 28% drop in GDP that year,

Guinea-Bissau (continued)

with partial recovery in 1999-2001. Before the war, trade reform and price liberalization were the most successful part of the country's structural adjustment program under IMF sponsorship. The tightening of monetary policy and the development of the private sector had also begun to reinvigorate the economy. Because of high costs, the development of petroleum, phosphate, and other mineral resources is not a near-term prospect. However, unexploited offshore oil reserves could provide much-needed revenue in the long run. The inequality of income distribution is one of the most extreme in the world. The government and international donors continue to work out plans to forward economic development.

Guyana

Introduction

Background: Guyana achieved independence from the UK in 1966 and became a republic in 1970. In 1989 Guyana launched an Economic Recovery Program, which marked a dramatic reversal from a state-controlled, socialist economy towards a more open, free market system. Results through the first decade have proven encouraging.

Economy

Economy - overview: The Guyanese economy has exhibited moderate economic growth since 1999, based on an expansion in the agricultural and mining sectors, a more favorable atmosphere for business initiatives, a more realistic exchange rate, fairly low inflation, and the continued support of international organizations. Chronic problems include a shortage of skilled labor and a deficient infrastructure. The government is juggling a sizable external debt against the urgent need for expanded public investment. Low prices for key mining and agricultural commodities combined with troubles in the bauxite and sugar industries threaten the government's already tenuous fiscal position and dim prospects for 2002.

Haiti

Introduction

Background: One of the poorest countries in the Western Hemisphere, Haiti has been plagued by political violence for most of its history. Over three decades of dictatorship followed by military rule ended in 1990 when Jean-Bertrand ARIÏTIDE was elected president. Most of his term was usurped by a military takeover, but he was able to return to office in 1994 and oversee the installation of a close associate to the presidency in 1996. ARIÏTIDE won a second term as president in 2000, and took office early in 2001. However, a political crisis stemming from fraudulent legislative elections in 2000 has not yet been resolved.

Economy

Economy - overview: About 80% of the population lives in abject poverty. Nearly 70% of all Haitians depend on the agriculture sector, which consists mainly of small-scale subsistence farming and employs about two-thirds of the economically active work force. The country has experienced little job creation since the former President PREVAL took office in February 1996, although the informal economy is growing. Following legislative elections in May 2000, fraught with irregularities, international donors - including the US and EU - suspended almost all aid to Haiti. The economy shrank an estimated 1.2% in 2001, and the contraction will likely intensify in 2002 unless a political agreement with donors is reached and aid restored.

Holy See (Vatican City)

Introduction

Background: Popes in their secular role ruled portions of the Italian peninsula for more than a thousand years until the mid 19th century, when many of the Papal States were seized by the newly united Kingdom of Italy. In 1870, the pope's holdings were further circumscribed when Rome itself was annexed. Disputes between a series of "prisoner" popes and Italy were resolved in 1929 by three Lateran Treaties, which established the independent state of Vatican City and granted Roman Catholicism special status in Italy. In 1984, a concordat between the Holy See and Italy modified certain of the earlier treaty provisions, including the primacy of Roman Catholicism as the Italian state religion. Present concerns of the Holy See include the failing health of Pope John Paul II, interreligious dialogue and reconciliation, and the adjustment of church doctrine in an era of rapid change and globalization. About 1 billion people worldwide profess the Catholic faith.

Honduras

Introduction

Background: Part of Spain's vast empire in the New World, Honduras became an independent nation in 1821. After two and one-half decades of mostly military rule, a freely elected civilian government came to power in 1982. During the 1980s, Honduras proved a haven for anti-Sandinista contras fighting the Marxist Nicaraguan Government and an ally to Salvadoran Government forces fighting against leftist guerrillas.

Economy

Economy - overview: Honduras, one of the poorest countries in the Western Hemisphere with an extraordinarily unequal distribution of income, is banking on expanded trade privileges under the Enhanced Caribbean Basin Initiative and on debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. While the country has met most of its macroeconomic targets, it failed to meet the IMF's goals to liberalize its energy and telecommunications sectors. Growth remains dependent on the status of the US economy, its major trading partner, on commodity prices, particularly coffee, and on containment of the recent rise in crime.

Hong Kong

(special administrative region of China)

Introduction

Background: Occupied by the UK in 1841, Hong Kong was formally ceded by China the following year; various adjacent lands were added later in the 19th century. Pursuant to an agreement signed by China and the UK on 19 December 1984, Hong Kong became the Hong Kong Special Administrative Region (SAR) of China on 1 July 1997. In this agreement, China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be imposed on Hong Kong and that Hong Kong will enjoy a high degree of autonomy in all matters except foreign and defense affairs for the next 50 years.

Economy

Economy - overview: Hong Kong has a bustling free market economy highly dependent on international trade. Natural resources are limited, and food and raw materials must be imported. Indeed, imports and exports, including reexports, each exceed GDP in dollar value. Even before Hong Kong reverted to Chinese administration on 1 July 1997 it had extensive trade and investment ties with China. Per capita GDP compares with the level in the four big economies of Western Europe. GDP growth averaged

a strong 5% in 1989-97. The widespread Asian economic difficulties in 1998 hit this trade-dependent economy quite hard, with GDP down 5%. The economy, with growth of 10% in 2000, recovered rapidly from the Asian financial crisis. The recent global downturn has badly hurt Hong Kong's exports and GDP growth is estimated to be 0% in 2001. Private sector analysts project 2002 GDP growth to be 1.8%.

Howland Island

(territory of the US)

Introduction

Background: Discovered by the US early in the 19th century, the island was officially claimed by the US in 1857. Both US and British companies mined for guano until about 1890. Earhart Light is a day beacon near the middle of the west coast that was partially destroyed during World War II, but has since been rebuilt; it is named in memory of the famed aviatrix Amelia EARHART. The island is administered by the US Department of the Interior as a National Wildlife Refuge.

Hungary

Introduction

Background: Hungary was part of the polyglot Austro-Hungarian Empire, which collapsed during World War I. The country fell under communist rule following World War II. In 1956, a revolt and announced withdrawal from the Warsaw Pact were met with a massive military intervention by Moscow. In the more open GORBACHEV years, Hungary led the movement to dissolve the Warsaw Pact and steadily shifted toward multiparty democracy and a market-oriented economy. Following the collapse of the USSR in 1991, Hungary developed close political and economic ties to Western Europe. It joined NATO in 1999 and is a frontrunner in a future expansion of the EU.

Economy

Economy - overview: Hungary continues to demonstrate strong economic growth and to work toward accession to the European Union. The private sector accounts for over 80% of GDP. Foreign ownership of and investment in Hungarian firms is widespread, with cumulative foreign direct investment totaling more than \$23 billion since 1989. Hungarian sovereign debt was upgraded in 2000 to the second-highest rating among all the Central European transition economies. Inflation and unemployment - both priority concerns in 2001 - have declined substantially. Economic reform measures such as health care reform, tax reform, and local government financing have not yet been addressed by the ORBAN government.

Iceland

Introduction

Background: Settled by Norwegian and Celtic (Scottish and Irish) immigrants during the late 9th and 10th centuries A.D., Iceland boasts the world's oldest functioning legislative assembly, the Althing, established in 930. Independent for over 300 years, Iceland was subsequently ruled by Norway and Denmark. Fallout from the Askja volcano of 1875 devastated the Icelandic economy and caused widespread famine. Over the next quarter century, 20% of the island's population emigrated, mostly to Canada and the US. Limited home rule from Denmark was granted in 1874 and complete independence attained in 1944. Literacy, longevity, income, and social cohesion are first-rate by world standards.

Economy

Economy - overview: Iceland's Scandinavian-type economy is basically capitalistic, yet with an extensive welfare system, low unemployment, and remarkably even distribution of income. In the absence of other natural resources (except for abundant hydrothermal and geothermal power), the economy depends heavily on the fishing industry, providing 70% of export earnings and employing 12% of the work force. The economy remains sensitive to declining fish stocks as well as to drops in world prices for its main

exports: fish and fish products, aluminum, and ferrosilicon. The center-right government plans to continue its policies of reducing the budget and current account deficits, limiting foreign borrowing, containing inflation, revising agricultural and fishing policies, diversifying the economy, and privatizing state-owned industries. The government remains opposed to EU membership, primarily because of Icelanders' concern about losing control over their fishing resources. Iceland's economy has been diversifying into manufacturing and service industries in the last decade, and new developments in software production, biotechnology, and financial services are taking place. The tourism sector is also expanding, with the recent trends in ecotourism and whale watching. Growth has been remarkably steady over the past five years at 4%-5%.

India

Introduction

Background: The Indus Valley civilization, one of the oldest in the world, goes back at least 5,000 years. Aryan tribes from the northwest invaded about 1500 B.C.; their merger with the earlier inhabitants created the classical Indian culture. Arab incursions starting in the 8th century and Turkish in 12th were followed by European traders beginning in the late 15th century. By the 19th century, Britain had assumed political control of virtually all Indian lands. Nonviolent resistance to British colonialism under Mohandas GANDHI and Jawaharlal NEHRU led to independence in 1947. The subcontinent was divided into the secular state of India and the smaller Muslim state of Pakistan. A third war between the two countries in 1971 resulted in East Pakistan becoming the separate nation of Bangladesh. Fundamental concerns in India include the ongoing dispute with Pakistan over Kashmir, massive overpopulation, environmental degradation, extensive poverty, and ethnic and religious strife, all this despite impressive gains in economic investment and output.

Economy

Economy - overview: India's economy encompasses traditional village farming, modern agriculture, handicrafts, a wide range of modern industries, and a multitude of support services. About a quarter of the population is too poor to be able to afford an adequate diet. India's international payments position remained strong in 2001 with adequate foreign exchange reserves, and moderately depreciating nominal exchange rates. Growth in manufacturing output has slowed, and electricity shortages continue in many regions. India has large numbers of well-educated people skilled in English language; India is a major exporter of software services and software workers.

Communications

Telephones - main lines in use: 27.7 million (October 2000)

Telephones - mobile cellular: 2.93 million (November 2000)

Telephone system:

general assessment: mediocre service; local and long distance service provided throughout all regions of the country, with services primarily concentrated in the urban areas; major objective is to continue to expand and modernize long-distance network to keep pace with rapidly growing number of local subscriber lines; steady improvement is taking place with the recent admission of private and private-public investors, but, with telephone density at about two for each 100 persons and a waiting list of over 2 million, demand for main line telephone service will not be satisfied for a very long time

domestic: local service is provided by microwave radio relay and coaxial cable, with open wire and obsolete electromechanical and manual switchboard systems still in use in rural areas; starting in the 1980s, a substantial amount of digital switch gear has been introduced for local and long-distance service; long-distance traffic is carried mostly by coaxial cable and low-capacity microwave radio relay; since 1985 significant trunk capacity has been added in the form of fiber-optic cable and a domestic satellite system with 254 earth stations; mobile cellular service is provided in four metropolitan cities

international: satellite earth stations - 8 Intelsat (Indian Ocean) and 1 Inmarsat (Indian Ocean region); nine gateway exchanges operating from Mumbai (Bombay), New Delhi, Kolkata (Calcutta), Chennai (Madras), Jalandhar, Kanpur, Gaidhinagar, Hyderabad, and Ernakulam; 4 submarine cables - LOCOM linking Chennai (Madras) to Penang; Indo-UAE-Gulf cable linking Mumbai (Bombay) to Al Fujayrah, UAE; India-SEA-ME-WE-3, SEA-ME-WE-2 with landing sites at Cochin and Mumbai (Bombay); Fiber-Optic Link Around the Globe (FLAG) with landing site at Mumbai (Bombay) (2000)

Radio broadcast stations: AM 153, FM 91, shortwave 68 (1998)

Transnational Issues

Disputes - international: discussions with Bangladesh remain stalled to delimit a small section of river boundary, demarcate and fence off the entire boundary, exchange 162 minuscule enclaves, and allocate divided villages while skirmishes, illegal trafficking, and violence along the border continue; Bangladesh has protested India's attempts to fence off high traffic sections of the porous boundary; dispute with Bangladesh over New Moore/South Talpatty Island in the Bay of Bengal; much of the rugged, militarized boundary with China is in dispute but talks to resolve the least contested middle sector resumed in 2001; with Pakistan, armed stand-off over the status and sovereignty of Kashmir continues; dispute with Pakistan over terminus of Rann of Kutch prevents extension of a maritime boundary; water-sharing problems with Pakistan persist over the Indus River (Wular Barrage); Joint Border Committee formed with Nepal in 2001 is intended to resolve 53 disputed sections of boundary covering an area of 720 sq km

Illicit drugs: world's largest producer of licit opium for the pharmaceutical trade, but an undetermined quantity of opium is diverted to illicit international drug markets; transit country for illicit narcotics produced in neighboring countries; illicit producer of hashish and methaqualone

Indian Ocean

Introduction

Background: The Indian Ocean is the third-largest of the world's five oceans (after the Pacific Ocean and Atlantic Ocean, but larger than the Southern Ocean and Arctic Ocean). Four critically important access waterways are the Suez Canal (Egypt), Bab el Mandeb (Djibouti-Yemen), Strait of Hormuz (Iran-Oman), and Strait of Malacca (Indonesia-Malaysia). The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Indian Ocean south of 60 degrees south.

Geography

Location: body of water between Africa, the Southern Ocean, Asia, and Australia

Geographic coordinates: 20 00 S, 80 00 E

Map references: Political Map of the World

Area:

total: 68,556 million sq km

note: includes Andaman Sea, Arabian Sea, Bay of Bengal, Great Australian Bight, Gulf of Aden, Gulf of Oman, Mozambique Channel, Persian Gulf, Red Sea, Strait of Malacca, and other tributary water bodies

Area - comparative: about 5.5 times the size of the US

Coastline: 66,526 km

Climate: northeast monsoon (December to April), southwest monsoon (June to October); tropical cyclones occur during May/June and October/November in the northern Indian Ocean and January/February in the southern Indian Ocean

Terrain: surface dominated by counterclockwise gyre (broad, circular system of currents) in the southern Indian Ocean; unique reversal of surface currents in the northern Indian Ocean; low atmospheric pressure over southwest Asia from hot, rising, summer air results in the southwest monsoon and southwest-to-northeast winds and currents, while

high pressure over northern Asia from cold, falling, winter air results in the northeast monsoon and northeast-to-southwest winds and currents; ocean floor is dominated by the Mid-Indian Ocean Ridge and subdivided by the Southeast Indian Ocean Ridge, Southwest Indian Ocean Ridge, and Ninetyeast Ridge

Elevation extremes:

lowest point: Java Trench -7,258 m

highest point: sea level 0 m

Natural resources: oil and gas fields, fish, shrimp, sand and gravel aggregates, placer deposits, polymetallic nodules

Natural hazards: occasional icebergs pose navigational hazard in southern reaches

Environment - current issues: endangered marine species include the dugong, seals, turtles, and whales; oil pollution in the Arabian Sea, Persian Gulf, and Red Sea

Geography - note: major chokepoints include Bab el Mandeb, Strait of Hormuz, Strait of Malacca, southern access to the Suez Canal, and the Lombok Strait

Economy

Economy - overview: The Indian Ocean provides major sea routes connecting the Middle East, Africa, and East Asia with Europe and the Americas. It carries a particularly heavy traffic of petroleum and petroleum products from the oilfields of the Persian Gulf and Indonesia. Its fish are of great and growing importance to the bordering countries for domestic consumption and export. Fishing fleets from Russia, Japan, South Korea, and Taiwan also exploit the Indian Ocean, mainly for shrimp and tuna. Large reserves of hydrocarbons are being tapped in the offshore areas of Saudi Arabia, Iran, India, and western Australia. An estimated 40% of the world's offshore oil production comes from the Indian Ocean. Beach sands rich in heavy minerals and offshore placer deposits are actively exploited by bordering countries, particularly India, South Africa, Indonesia, Sri Lanka, and Thailand.

Indonesia

Introduction

Background: The world's largest archipelago, Indonesia achieved independence from the Netherlands in 1949. Current issues include: implementing IMF-mandated reforms of the banking sector, effecting a transition to a popularly-elected government after four decades of authoritarianism, addressing charges of cronyism and corruption, holding the military accountable for human rights violations, and resolving growing separatist pressures in Aceh and Irian Jaya. On 30 August 1999 a provincial referendum for independence was overwhelmingly approved by the people of Timor Timur. Concurrence followed by Indonesia's national legislature, and the name East Timor was provisionally adopted. On 20 May 2002, East Timor was internationally recognized as an independent state.

Economy

Economy - overview: Indonesia, a vast polyglot nation, faces severe economic development problems, stemming from secessionist movements and the low level of security in the regions, the lack of reliable legal recourse in contract disputes, corruption, weaknesses in the banking system, and strained relations with the IMF. Investor confidence will remain low and few new jobs will be created under these

circumstances. In November 2001, Indonesia agreed with the IMF on a series of economic reforms in 2002, thus enabling further IMF disbursements. Keys to future growth remain internal reform, the build-up of the confidence of international donors and investors, and a strong comeback in the global economy.

Iran

Introduction

Background: Known as Persia until 1935, Iran became an Islamic republic in 1979 after the ruling shah was forced into exile. Conservative clerical forces subsequently crushed westernizing liberal elements. Militant Iranian students seized the US Embassy in Tehran on 4 November 1979 and held it until 20 January 1981. During 1980-88, Iran fought a bloody, indecisive war with Iraq over disputed territory. Key current issues affecting the country include the pace of accepting outside modernizing influences and reconciliation between clerical control of the regime and popular government participation and widespread demands for reform.

Economy

Economy - overview: Iran's economy is a mixture of central planning, state ownership of oil and other large enterprises, village agriculture, and small-scale private trading and service ventures. President KHATAMI has continued to follow the market reform plans of former President RAFSANJANI and has indicated that he will pursue diversification of Iran's oil-reliant economy although he has made little progress toward that goal. The strong oil market in 1996 helped ease financial pressures on Iran and allowed for Tehran's timely debt service payments. Iran's financial situation tightened in 1997 and deteriorated further in 1998 because of lower oil prices. The subsequent rise in oil prices in 1999-2000 afforded Iran fiscal breathing room but does not solve Iran's structural economic problems, including the encouragement of foreign investment.

Communications

Telephones - main lines in use: 6.313 million (1997)

Telephones - mobile cellular: 265,000 (August 1998)

Telephone system:

general assessment: inadequate but currently being modernized and expanded with the goal of not only improving the efficiency and increasing the volume of the urban service but also bringing telephone service to several thousand villages, not presently connected

domestic: as a result of heavy investing in the telephone system since 1994, the number of long-distance channels in the microwave radio relay trunk has grown substantially; many villages have been brought into the net; the number of main lines in the urban systems has approximately doubled; and thousands of mobile cellular subscribers are being served; moreover, the technical level of the system has been raised by the installation of thousands of digital switches

international: HF radio and microwave radio relay to Turkey, Azerbaijan, Pakistan, Afghanistan, Turkmenistan, Syria, Kuwait, Tajikistan, and Uzbekistan; submarine fiber-optic cable to UAE with access to Fiber-Optic Link Around the Globe (FLAG); Trans-Asia-Europe (TAE) fiber-optic line runs from Azerbaijan through the northern portion of Iran to Turkmenistan with expansion to Georgia and Azerbaijan; satellite earth stations - 9 Intelsat and 4 Inmarsat; Internet service available but limited to electronic mail to promote Iranian culture

Radio broadcast stations: AM 72, FM 5, shortwave 5 (1998)

Transnational Issues

Disputes - international: despite restored diplomatic relations in 1990, Iran lacks maritime boundary with Iraq and disputes land boundary, navigation channels, and other issues from eight-year war; UAE seeks United Arab League and other international support against Iran's occupation of Greater Tunb Island (called Tunb al Kubra in Arabic by UAE and Jazireh-ye Tonb-e Bozorg in Persian by Iran) and Lesser Tunb Island (called Tunb al Sughra in Arabic by UAE and Jazireh-ye Tonb-e Kuchek in Persian by Iran) and attempts to occupy completely a jointly administered island in the Persian Gulf (called Abu Musa in Arabic by UAE and Jazireh-ye Abu Musa in Persian by Iran); Iran insists on division of Caspian Sea into five equal sectors while Azerbaijan, Kazakhstan, Russia, and Turkmenistan have generally agreed upon equidistant seabed boundaries; Iran threatens to conduct oil exploration in Azerbaijani-claimed waters, while interdicting Azerbaijani activities

Illicit drugs: despite substantial interdiction efforts, Iran remains a key transshipment point for Southwest Asian heroin to Europe; domestic narcotics consumption remains a persistent problem and Iranian press reports estimate at least 1.8 million drug users in the country

Iraq

Introduction

Background: Formerly part of the Ottoman Empire, Iraq became an independent kingdom in 1932. A "republic" was proclaimed in 1958, but in actuality a series of military strongmen have ruled the country since then, the latest being SADDAM Husayn. Territorial disputes with Iran led to an inconclusive and costly eight-year war (1980-88). In August 1990 Iraq seized Kuwait, but was expelled by US-led, UN coalition forces during January-February 1991. The victors did not occupy Iraq, however, thus allowing the regime to stay in control. Following Kuwait's liberation, the UN Security Council (UNSC) required Iraq to scrap all weapons of mass destruction and long-range missiles and to allow UN verification inspections. UN trade sanctions remain in effect due to incomplete Iraqi compliance with relevant UNSC resolutions.

Environment - current issues: government water control projects have drained most of the inhabited marsh areas east of An Nasiriyah by drying up or diverting the feeder streams and rivers; a once sizable population of Shi'a Muslims, who have inhabited these areas for thousands of years, has been displaced; furthermore, the destruction of the natural habitat poses serious threats to the area's wildlife populations; inadequate supplies of potable water; development of Tigris-Euphrates Rivers system contingent upon agreements with upstream riparian Turkey; air and water pollution; soil degradation (salination) and erosion; desertification

Environment - international agreements:

party to: Law of the Sea, Nuclear Test Ban signed, but not ratified: Environmental Modification

Geography - note: strategic location on Shatt al Arab waterway and at the head of the Persian Gulf

Economy

Economy - overview: Iraq's economy is dominated by the oil sector, which has traditionally provided about 95% of foreign exchange earnings. In the 1980s financial problems caused by massive expenditures in the eight-year war with Iran and damage to oil export facilities by Iran led the government to implement austerity measures, borrow heavily, and later reschedule foreign debt payments; Iraq suffered economic losses from the war of at least \$100 billion. After hostilities ended in 1988, oil exports gradually increased with the construction of new pipelines and restoration of damaged facilities. Iraq's seizure of Kuwait in August 1990, subsequent international economic sanctions, and damage from military action by an international coalition beginning in January 1991 drastically reduced economic activity. Although government policies supporting large military and internal security forces and allocating resources to key supporters of the regime have hurt the economy, implementation of the UN's oil-for-food program in December 1996 has helped improve conditions for the average Iraqi citizen. For the first six, six-month phases of the program, Iraq was allowed to export limited amounts of oil in exchange for food, medicine, and some infrastructure spare parts. In December 1999 the UN Security Council authorized Iraq to export under the program as much oil as required to meet humanitarian needs. Oil exports are now more than three-quarters prewar level. However, 28% of Iraq's export revenues under the program are deducted to meet UN Compensation Fund and UN administrative expenses. The drop in GDP in 2001 was largely the result of the global economic slowdown and lower oil prices. Per capita food imports have increased significantly, while medical supplies and health care services are steadily improving. Per capita output and living standards are still well below the prewar level, but any estimates have a wide range of error.

Ireland

Introduction

Background: A failed 1916 Easter Monday Rebellion touched off several years of guerrilla warfare that in 1921 resulted in independence from the UK for the 26 southern counties; the six northern counties (Ulster) remained part of Great Britain. In 1948 Ireland withdrew from the British Commonwealth; it joined the European Community in 1973. Irish governments have sought the peaceful unification of Ireland and have cooperated with Britain against terrorist groups. A peace settlement for Northern Ireland, known as the Good Friday Agreement and approved in 1998, is currently being implemented.

Economy

Economy - overview: Ireland is a small, modern, trade-dependent economy with growth averaging a robust 9% in 1995-2001. Agriculture, once the most important sector, is now dwarfed by industry, which accounts for 38% of GDP, about 80% of exports, and

employs 28% of the labor force. Although exports remain the primary engine for Ireland's robust growth, the economy is also benefiting from a rise in consumer spending and recovery in both construction and business investment. Over the past decade, the Irish government has implemented a series of national economic programs designed to curb inflation, reduce government spending, increase labor force skills, and promote foreign investment. Ireland joined in launching the euro currency system in January 1999 along with 10 other EU nations. The economy felt the impact of the global economic slowdown in 2001, particularly in the high-tech export sector; the growth rate was cut by nearly half. Growth in 2002 is expected to fall in the 3%-5% range.

Israel

(also see separate Gaza Strip and West Bank entries)

Introduction

Background: Following World War II, the British withdrew from their mandate of Palestine, and the UN partitioned the area into Arab and Jewish states, an arrangement rejected by the Arabs. Subsequently, the Israelis defeated the Arabs in a series of wars without ending the deep tensions between the two sides. The territories occupied by Israel since the 1967 war are not included in the Israel country profile, unless otherwise noted. On 25 April 1982, Israel withdrew from the Sinai pursuant to the 1979 Israel-Egypt Peace Treaty. Outstanding territorial and other disputes with Jordan were resolved in the 26 October 1994 Israel-Jordan Treaty of Peace. In keeping with the framework established at the Madrid Conference in October 1991, bilateral negotiations were conducted between Israel and Palestinian representatives (from the Israeli-occupied West Bank and Gaza Strip) and Syria, to achieve a permanent settlement; however, these efforts were derailed/postponed by the outbreak of Israeli-Palestinian violence in September 2000. On 25 May 2000, Israel withdrew unilaterally from southern Lebanon, which it had occupied since 1982.

Economy

Economy - overview: Israel has a technologically advanced market economy with substantial government participation. It depends on imports of crude oil, grains, raw materials, and military equipment. Despite limited natural resources, Israel has intensively developed its agricultural and industrial sectors over the past 20 years. Israel is largely self-sufficient in food production except for grains. Cut diamonds, high-technology equipment, and agricultural products (fruits and vegetables) are the leading exports. Israel usually posts sizable current account deficits, which are covered by large transfer payments from abroad and by foreign loans. Roughly half of the government's external debt is owed to the US, which is its major source of economic and military aid. The influx of Jewish immigrants from the former USSR during the period 1989-99 coupled with the opening of new markets at the end of the Cold War, energized Israel's economy, which grew rapidly in the early 1990s. But growth began moderating in 1996 when the government imposed tighter fiscal and monetary policies and the immigration bonus petered out. Growth was a strong 6.4% in 2000. But the outbreak of Palestinian unrest in late September 2000 and the declines in the high-technology and tourist sectors led to a 0.6% drop in GDP in 2001.

Italy

Introduction

Background: Italy became a nation-state in 1861 when the city-states of the peninsula, along with Sardinia and Sicily, were united under King Victor EMMANUEL. An era of parliamentary government came to a close in the early 1920s when Benito MUSSOLINI established a Fascist dictatorship. His disastrous alliance with Nazi Germany led to Italy's defeat in World War II. A democratic republic replaced the monarchy in 1946 and economic revival followed. Italy was a charter member of NATO and the European Economic Community (EEC). It has been at the forefront of European economic and political unification, joining the European Monetary Union in 1999. Persistent problems include illegal immigration, the ravages of organized crime, corruption, high unemployment, and the low incomes and technical standards of southern Italy compared with the prosperous north.

Economy

Economy - overview: Italy has a diversified industrial economy with roughly the same total and per capita output as France and the UK. This capitalistic economy remains divided into a developed industrial north, dominated by private companies, and a less developed agricultural south, with 20% unemployment. Most raw materials needed by industry and more than 75% of energy requirements are imported. Over the past decade, Italy has pursued a tight fiscal policy in order to meet the requirements of the Economic and Monetary Unions and has benefited from lower interest and inflation rates. Italy's economic performance has lagged behind that of its EU partners, and the current government has enacted numerous short-term reforms aimed at improving competitiveness and long-term growth. Rome has moved slowly, however, on implementing needed structural reforms, such as lightening the high tax burden and overhauling Italy's rigid labor market and expensive pension system, because of the current economic slowdown and opposition from labor unions.

Jamaica

Introduction

Background: Jamaica gained full independence within the British Commonwealth in 1962. Deteriorating economic conditions during the 1970s led to recurrent violence and a dropoff in tourism. Elections in 1980 saw the democratic socialists voted out of office. Subsequent governments have been open market oriented. Political violence marred elections during the 1990s.

Economy

Economy - overview: The economy, which depends heavily on tourism and bauxite, has been stagnant since 1995. After five years of recession, the economy grew 0.8% in 2000 and 1.1% in 2001, but the global economic slowdown, particularly in the United States after the 11 September terrorist attacks, has stunted the economic recovery. Serious problems include: high interest rates; increased foreign competition; a pressured, sometimes sliding, exchange rate; a widening merchandise trade deficit; and a growing internal debt, the result of government bailouts to various ailing sectors of the economy, particularly the financial sector. Depressed economic conditions have led to increased civil unrest, including

a mounting crime rate. Jamaica's medium-term prospects will depend upon encouraging investment, maintaining a competitive exchange rate, selling off reacquired firms, and implementing proper fiscal and monetary policies.

Jan Mayen (territory of Norway)

Introduction

Background: This desolate, mountainous island was named after a Dutch whaling captain who indisputably discovered it in 1614 (earlier claims are inconclusive). Visited only occasionally by seal hunters and trappers over the following centuries, the island came under Norwegian sovereignty in 1929. The long dormant Haakon VII Toppen/Beerenberg volcano resumed activity in 1970; it is the northernmost active volcano on earth.

Japan

Introduction

Background: While retaining its time-honored culture, Japan rapidly absorbed Western technology during the late 19th and early 20th centuries. After its devastating defeat in World War II, Japan recovered to become the second most powerful economy in the world and a staunch ally of the US. While the emperor retains his throne as a symbol of national unity, actual power rests in networks of powerful politicians, bureaucrats, and business executives. The economy experienced a major slowdown in the 1990s following three decades of unprecedented growth.

Geography

Location: Eastern Asia, island chain between the North Pacific Ocean and the Sea of Japan, east of the Korean Peninsula
Geographic coordinates: 36 00 N, 138 00 E

Economy

Economy - overview: Government-industry cooperation, a strong work ethic, mastery of high technology, and a comparatively small defense allocation (1% of GDP) have helped Japan advance with extraordinary rapidity to the rank of second most technologically powerful economy in the world after the US and third largest economy in the world after the US and China. One notable characteristic of the economy is the working together of manufacturers, suppliers, and distributors in closely-knit groups called keiretsu. A second basic feature has been the guarantee of lifetime employment for a substantial portion of the urban labor force. Both features are now eroding. Industry, the most important sector of the economy, is heavily dependent on imported raw materials and fuels. The much smaller agricultural sector is highly subsidized and protected, with crop yields among the highest in the world. Usually self-sufficient in rice, Japan must import about 50% of its requirements of other grain and fodder crops. Japan maintains one of the world's largest fishing fleets and accounts for nearly 15% of the global catch. For three decades overall real economic growth had been spectacular: a 10% average in the 1960s, a 5% average in the 1970s, and a 4% average in the 1980s. Growth slowed markedly in the 1990s largely because of the aftereffects of overinvestment during the late 1980s and contractionary domestic policies intended to wring speculative excesses from the stock and real estate markets. Government efforts to revive economic growth have met with little success and were further hampered in 2000-01 by the slowing of the US and Asian economies. The crowding of habitable land area and the aging of the population

are two major long-run problems. Robotics constitutes a key long-term economic strength, with Japan possessing 410,000 of the world's 720,000 "working robots".

Jarvis Island

(territory of the US)

Introduction

Background: First discovered by the British in 1821, the uninhabited island was annexed by the US in 1858, but abandoned in 1879 after tons of guano had been removed. The UK annexed the island in 1889, but never carried out plans for further exploitation. The US occupied and reclaimed the island in 1935. Abandoned after World War II, the island is currently a National Wildlife Refuge administered by the US Department of the Interior; a day beacon is situated near the middle of the west coast.

Economy

Economy - overview: The economy is based largely on international financial services, agriculture, and tourism. Potatoes, cauliflower, tomatoes, and especially flowers are important export crops, shipped mostly to the UK. The Jersey breed of dairy cattle is known worldwide and represents an important export income earner. Milk products go to the UK and other EU countries. In 1996 the finance sector accounted for about 60% of the island's output. Tourism, another mainstay of the economy, accounts for 24% of GDP. In recent years, the government has encouraged light industry to locate in Jersey, with the result that an electronics industry has developed alongside the traditional manufacturing of knitwear. All raw material and energy requirements are imported, as well as a large share of Jersey's food needs. Light taxes and death duties make the island a popular tax haven.

Johnston Atoll

(territory of the US)

Introduction

Background: Both the US and the Kingdom of Hawaii annexed Johnston Atoll in 1858, but it was the US that mined the guano deposits until the late 1880s. The US Navy took over the atoll in 1934, and subsequently the US Air Force assumed control in 1948. The site was used for high altitude nuclear tests in the 1950s and 1960s, and until late in 2000 the atoll was maintained as a storage and disposal site for chemical weapons. Munitions destruction is now complete. Cleanup and closure of the facility is progressing, with completion anticipated in 2004.

Geography

Location: Oceania, atoll in the North Pacific Ocean 717 NM (1328 km) southwest of Honolulu, Hawaii, about one-third of the way from Hawaii to the Marshall Islands

Geographic coordinates: 16 45 N, 169 31 W

Map references: Oceania

Jordan

Introduction

Background: For most of its history since independence from British administration in 1946, Jordan was ruled by King HUSSEIN (1953-1999). A pragmatic ruler, he successfully navigated competing pressures from the major powers (US, USSR, and UK), various Arab states, Israel, and a large internal Palestinian population, through several wars and coup attempts. In 1989 he resumed parliamentary elections and gradually permitted political liberalization; in 1994 a formal peace treaty was signed with Israel. King ABDALLAH II - the eldest son of King HUSSEIN and Princess MUNA - assumed the throne following his father's death in February 1999. Since then, he has consolidated his power and established his domestic priorities.

Economy

Economy - overview: Jordan is a small Arab country with inadequate supplies of water and other natural resources such as oil. Debt, poverty, and unemployment are fundamental problems, but King ABDALLAH since assuming the throne in 1999 has undertaken some broad economic reforms in a long-term effort to improve living standards. Amman in the past three years has signed on to an IMF agreement, practiced careful monetary policy, and made significant headway with privatization. The government also has liberalized the trade regime sufficiently to secure Jordan's membership in the WTrO, an association agreement with the EU, and a free trade accord with US. These measures have helped improve productivity and have put Jordan on the foreign investment map. Ongoing challenges include fiscal adjustment to reduce the budget deficit and broader investment incentives to promote job-creating ventures.

Kazakhstan

Introduction

Background: Native Kazakhs, a mix of Turkic and Mongol nomadic tribes who migrated into the region in the 13th century, were rarely united as a single nation. The area was conquered by Russia in the 18th century and Kazakhstan became a Soviet Republic in 1936. During the 1950s and 1960s agricultural "Virgin Lands" program, Soviet citizens were encouraged to help cultivate Kazakhstan's northern pastures. This influx of immigrants (mostly Russians, but also some other deported nationalities) skewed the ethnic mixture and enabled non-Kazakhs to outnumber natives. Independence has caused many of these newcomers to emigrate. Current issues include: developing a cohesive national identity; expanding the development of the country's vast energy resources and exporting them to world markets; achieving a sustainable economic growth outside the oil, gas, and mining sectors; and strengthening relations with neighboring states and other foreign powers.

Economy

Economy - overview: Kazakhstan, the largest of the former Soviet republics in territory, excluding Russia, possesses enormous fossil fuel reserves as well as plentiful supplies of other minerals and metals. It also is a large agricultural - livestock and grain - producer. Kazakhstan's industrial sector rests on the extraction and processing of these natural resources and also on a growing machine-building sector specializing in construction equipment, tractors, agricultural machinery, and some defense items. The breakup of the USSR in December 1991 and the collapse in demand for Kazakhstan's traditional heavy industry products resulted in a short-term contraction of the economy, with the steepest annual decline occurring in 1994. In 1995-97, the pace of the government program of economic reform and privatization quickened, resulting in a substantial shifting of assets into the private sector. Kazakhstan has enjoyed double-digit growth in 2000-01 thanks largely to its booming energy sector, but also to economic reform, good harvests, and foreign investment. The opening of the Caspian Consortium pipeline in 2001, from western Kazakhstan's Tengiz oilfield to the Black Sea, substantially raises export capacity. Astana has embarked upon an industrial policy designed to diversify the economy away from overdependence on the oil sector by developing light industry.

Transnational Issues

Disputes - international: Kazakhstan is working rapidly with China and Russia to delimit its large open borders to control population migration, illegal activities, and trade; signed bilateral agreement with Russia delimiting the Caspian Sea seabed, but littoral states are far from any multilateral agreement on dividing the waters and seabed regimes - Iran insists on division of Caspian Sea into five equal sectors while Azerbaijan, Kazakhstan, Russia, and Turkmenistan have generally agreed upon equidistant seabed boundaries; border largely delimited with Uzbekistan, but unresolved dispute remains over sovereignty of two border villages, Bagys and Turkestan, and around the Arnasay dam; Kazakhstan, Tajikistan, Turkmenistan, and Uzbekistan wrestle with sharing limited water resources and the regional environmental degradation caused by the shrinking of the Aral Sea; disputes with Kyrgyzstan over providing water and hydropower to Kazakhstan

Illicit drugs: significant illicit cultivation of cannabis and limited cultivation of opium poppy and ephedra (for the drug ephedrone); limited government eradication program; cannabis consumed largely in the CIS; used as transshipment point for illicit drugs to Russia, North America, and Western Europe from Southwest Asia; developing heroin addiction problem

Kenya

Introduction

Background: Founding president and liberation struggle icon Jomo KENYATTA led Kenya from independence until his death in 1978, when current President Daniel Toroitich arap MOI took power in a constitutional succession. The country was a de facto one-party state from 1969 until 1982 when the ruling Kenya African National Union (KANU) made itself the sole legal party in Kenya. MOI acceded to internal and external pressure for political liberalization in late 1991. The ethnically fractured opposition failed to dislodge KANU from power in elections in 1992 and 1997, which were marred by violence and fraud, but are viewed as having generally reflected the will of the Kenyan people. The country faces a period of political uncertainty because MOI is constitutionally required to step down at the next election that has to be held by early 2003.

Economy

Economy - overview: Kenya, the regional hub for trade and finance in East Africa, is hampered by corruption and reliance upon several primary goods whose prices continue to decline. Following strong economic growth in 1995 and 1996, Kenya's economy has stagnated, with GDP growth failing to keep up with the rate of population growth. In 1997, the IMF suspended Kenya's Enhanced Structural Adjustment Program due to the government's failure to maintain reforms and curb corruption. A severe drought from 1999 to 2000 compounded Kenya's problems, causing water and energy rationing and reducing agricultural output. As a result, GDP contracted by 0.3% in 2000. The IMF, which had resumed loans in 2000 to help Kenya through the drought, again halted lending in 2001 when the government failed to institute several anticorruption measures. Despite the return of strong rains in 2001, weak commodity prices, endemic corruption, and low investment limited Kenya's economic growth to 1%, and Kenya is unlikely to see growth above 2% in 2002. Substantial IMF and other foreign support is essential to prevent a further decline in real per capita output.

Transnational Issues

Disputes - international: since colonial times, Kenya's administrative boundary has extended beyond its treaty boundary into Sudan creating the "Ilemi Triangle"; arms smuggling and Oromo rebel activities prompt strict border regime with Somalia
Illicit drugs: widespread harvesting of small plots of marijuana; transit country for South Asian heroin destined for Europe and North America; Indian methaqualone also transits on way to South Africa

Kingman Reef

(territory of the US)

Introduction

Background: The US annexed the reef in 1922. Its sheltered lagoon served as a way station for flying boats on Hawaii-to-American Samoa flights during the late 1930s. There is no flora on the reef, which is frequently awash, but it does support an abundant and diverse marine fauna. In 2001, the waters surrounding the reef were designated a National Wildlife Refuge.

Geography

Kiribati

Introduction

Background: The Gilbert Islands were granted self-rule by the UK in 1971 and complete independence in 1979 under the new name of Kiribati. The US relinquished all claims to the sparsely inhabited Phoenix and Line Island groups in a 1979 treaty of friendship with Kiribati.

Geography

Location: Oceania, group of 33 coral atolls in the Pacific Ocean, straddling the equator; the capital Tarawa is about one-half of the way from Hawaii to Australia; note - on 1 January 1995, Kiribati proclaimed that all of its territory lies in the same time zone as its Gilbert Islands group (GMT +12) even though the Phoenix Islands and the Line Islands under its jurisdiction lie on the other side of the International Date Line

Geographic coordinates: 1 25 N, 173 00 E

Map references: Oceania

Area:

total: 811 sq km

land: 811 sq km

water: 0 sq km

note: includes three island groups - Gilbert Islands, Line Islands, Phoenix Islands

Area - comparative: four times the size of Washington, DC

Land boundaries: 0 km

Coastline: 1,143 km

Maritime claims:

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: tropical; marine, hot and humid, moderated by trade winds

Terrain: mostly low-lying coral atolls surrounded by extensive reefs

Elevation extremes:

lowest point: Pacific Ocean 0 m

highest point: unnamed location on Banaba 81 m

Natural resources: phosphate (production discontinued in 1979)

Land use:

arable land: 0%

permanent crops: 51%

other: 49% (1998 est.)

Irrigated land: NA sq km

Natural hazards: typhoons can occur any time, but usually November to March; occasional tornadoes; low level of some of the islands make them very sensitive to changes in sea level

Environment - current issues: heavy pollution in lagoon of south Tarawa atoll due to heavy migration mixed with traditional practices such as lagoon latrines and open-pit dumping; ground water at risk

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Hazardous Wastes, Marine Dumping, Ozone Layer Protection **signed, but not ratified:** none of the selected agreements

Geography - note: 21 of the 33 islands are inhabited; Banaba (Ocean Island) in Kiribati is one of the three great phosphate rock islands in the Pacific Ocean - the others are Makatea in French Polynesia, and Nauru

Economy

Economy - overview: A remote country of 33 scattered coral atolls, Kiribati has few national resources. Commercially viable phosphate deposits were exhausted at the time of independence from the UK in 1979. Copra and fish now represent the bulk of production and exports. The economy has fluctuated widely in recent years. Economic development is constrained by a shortage of skilled workers, weak infrastructure, and remoteness from international markets. Tourism provides more than one-fifth of GDP. The financial sector is at an early stage of development as is the expansion of private sector initiatives. Foreign financial aid, from UK, Japan, Australia, New Zealand, and China, is a critical supplement to GDP, equal to 25%-50% of GDP in recent years. Remittances from workers abroad account for more than \$5 million each year.

Korea, North

Introduction

Background: Following World War II, Korea was split with the northern half coming under Communist domination and the southern portion becoming Western oriented. KIM Chong-il has ruled North Korea since his father and the country's founder, president KIM Il-sung, died in 1994. After decades of mismanagement, the North relies heavily on international food aid to feed its population, while continuing to expend resources to maintain an army of about 1 million. North Korea's long-range missile development and research into nuclear, chemical, and biological weapons and massive conventional armed forces are of major concern to the international community.

Economy

Economy - overview: North Korea, one of the world's most centrally planned and isolated economies, faces desperate economic conditions. Industrial capital stock is nearly beyond repair as a result of years of underinvestment and spare parts shortages. Industrial and power output have declined in parallel. Despite a good harvest in 2001, the nation faces its eighth year of food shortages because of a lack of arable land; collective farming; weather-related problems, including major drought in 2000; and chronic shortages of fertilizer and fuel. Massive

international food aid deliveries have allowed the regime to escape mass starvation since 1995-96, but the population remains vulnerable to prolonged malnutrition and deteriorating living conditions.

Large-scale military spending eats up resources needed for investment and civilian consumption. In 2001, the regime placed emphasis on earning hard currency, developing information technology, addressing power shortages, and attracting foreign aid, but in no way at the expense of relinquishing central control over key national assets or undergoing widespread market-oriented reforms.

Korea, South

Introduction

Background: After World War II, a republic was set up in the southern half of the Korean Peninsula while a Communist-style government was installed in the north. The Korean War (1950-53) had US and other UN forces intervene to defend South Korea from North Korean attacks supported by the Chinese. An armistice was signed in 1953 splitting the peninsula along a demilitarized zone at about the 38th parallel. Thereafter, South Korea achieved rapid economic growth, with per capita income far outstripping the level of North Korea. In 1997, the nation suffered a severe financial crisis from which it continues to make a solid recovery. South Korea has also maintained its commitment to democratize its political processes. In June 2000, a historic first south-north summit took place between the south's President KIM Dae-jung and the north's leader KIM Chong-il. In December 2000, President KIM Dae-jung won the Nobel Peace Prize for his lifelong commitment to democracy and human rights in Asia. He is the first Korean to win a Nobel Prize.

Economy

Economy - overview: As one of the Four Tigers of East Asia, South Korea has achieved an incredible record of growth. Three decades ago GDP per capita was comparable with levels in the poorer countries of Africa and Asia. Today its GDP per capita is seven times India's, 17 times North Korea's, and comparable to the lesser economies of the European Union. This success through the late 1980s was achieved by a system of close government/business ties, including directed credit, import restrictions, sponsorship of specific industries, and a strong labor effort. The government promoted the import of raw materials and technology at the expense of consumer goods and encouraged savings and investment over consumption. The Asian financial crisis of 1997-99 exposed certain longstanding weaknesses in South Korea's development model, including high debt/equity ratios, massive foreign borrowing, and an undisciplined financial sector. Growth plunged by 6.6% in 1998, then strongly recovered to plus 10% in 1999 and 9% in 2000. Growth fell back to 3.3% in 2001 because of the slowing global economy, falling exports, and the perception that much-needed corporate and financial reforms have stalled.

Economy

Economy - overview: Kuwait is a small, rich, relatively open economy with proved crude oil reserves of 94 billion barrels - 10% of world reserves. Petroleum accounts for nearly half of GDP, 90% of export revenues, and 75% of government income. Kuwait's climate limits agricultural development. Consequently, with the exception of fish, it depends almost wholly on food imports. About 75% of potable water must be distilled or imported. Higher oil prices put the FY99/00 budget into a \$2 billion surplus. The FY00/01 budget covers only nine months because of a change in the fiscal year. The budget for FY01/02 envisioned higher expenditures for salaries, construction, and other general categories. Kuwait continues its discussions with foreign oil companies to develop fields in the northern part of the country.

Economy

Economy - overview: Kyrgyzstan is a small, poor, mountainous country with a predominantly agricultural economy. Cotton, wool, and meat are the main agricultural products and exports. Industrial exports include gold, mercury, uranium, and electricity. Kyrgyzstan has been one of the most progressive countries of the former Soviet Union in carrying out market reforms. With fits and starts, inflation has been lowered to an estimated 7% in 2001. Much of the government's stock in enterprises has been sold. Drops in production had been severe since the breakup of the Soviet Union in December 1991, but by mid-1995 production began to recover and exports began to increase. Growth was held down to 2.1% in 1998 largely because of the spillover from Russia's economic difficulties, but moved ahead to 3.6% in 1999, 5% in 2000, and 5% again in 2001. Despite

these gains, poverty indicators are no better in 2001 than in 1996. On the positive side, the government and the international financial institutions have embarked on a comprehensive medium-term poverty reduction and economic growth strategy. In November 2001, with financing assurance from the Paris Club, the IMF Board approved a three-year, \$93 million Poverty Reduction and Growth Facility.

Laos

Introduction

Background: In 1975, the Communist Pathet Lao took control of the government, ending a six-century-old monarchy. Initial closer ties to Vietnam and socialization were replaced with a gradual return to private enterprise, an easing of foreign investment laws, and the admission into ASEAN in 1997.

Economy

Economy - overview: The government of Laos - one of the few remaining official Communist states - began decentralizing control and encouraging private enterprise in 1986. The results, starting from an extremely low base, were striking - growth averaged 7% in 1988-2001 except during the short-lived drop caused by the Asian financial crisis beginning in 1997. Despite this high growth rate, Laos remains a country with a primitive infrastructure; it has no railroads, a rudimentary road system, and limited external and internal telecommunications. Electricity is available in only a few urban areas. Subsistence agriculture accounts for half of GDP and provides 80% of total employment. The economy will continue to benefit from aid from the IMF and other international sources and from new foreign investment in food-processing and mining.

Latvia

Introduction

Background: After a brief period of independence between the two World Wars, Latvia was annexed by the USSR in 1940. It reestablished its independence in 1991 following the breakup of the Soviet Union. Although the last Russian troops left in 1994, the status of the Russian minority (some 30% of the population) remains of concern to Moscow. Latvia continues to revamp its economy for eventual integration into various Western European political and economic institutions.

Economy

Economy - overview: Latvia's transitional economy recovered from the 1998 Russian financial crisis, largely due to the SKELE government's budget stringency and a gradual reorientation of exports toward EU countries, lessening Latvia's trade dependency on Russia. The majority of companies, banks, and real estate have been privatized. Latvia officially joined the World Trade Organization in February 1999 - the first Baltic state to join - and was invited at the Helsinki EU Summit in December 1999 to begin accession talks in early 2000. Preparing for EU membership over the next few years remains a top foreign policy goal. The high current account deficit remains a major concern.

Lebanon

Introduction

Background: Lebanon has made progress toward rebuilding its political institutions since 1991 and the end of the devastating 16-year civil war. Under the Ta'if Accord - the blueprint for national reconciliation - the Lebanese have established a more equitable political system, particularly by giving Muslims a greater say in the political process while institutionalizing sectarian divisions in the government. Since the end of the war, the Lebanese have conducted several successful elections, most of the militias have been weakened or disbanded, and the Lebanese Armed Forces (LAF) have extended central government authority over about two-thirds of the country. Hizballah, the radical Shi'a party, retains its weapons. Syria maintains about 20,000 troops in Lebanon based mainly in Beirut, North Lebanon, and the Bekaa Valley. Syria's troop deployment was legitimized by the Arab League during Lebanon's civil war and in the Ta'if Accord. Damascus justifies its continued military presence in Lebanon by citing Beirut's requests and the failure of the Lebanese Government to implement all of the constitutional reforms in the Ta'if Accord. Israel's withdrawal from its security zone in southern Lebanon in May of 2000, however, has emboldened some Lebanese Christians and Druze to demand that Syria withdraw its forces as well.

Economy

Economy - overview: The 1975-91 civil war seriously damaged Lebanon's economic infrastructure, cut national output by half, and all but ended Lebanon's position as a Middle Eastern entrepot and banking hub. Peace enabled the central government to restore control in Beirut, begin collecting taxes, and regain access to key port and government facilities. Economic recovery was helped by a financially sound banking system and resilient small- and medium-scale manufacturers. Family remittances, banking services, manufactured and farm exports, and international aid provided the main sources of foreign exchange. Lebanon's economy made impressive gains since the launch in 1993 of "Horizon 2000," the government's \$20 billion reconstruction program. Real GDP grew 8% in 1994, 7% in 1995, 4% in 1996 and in 1997 but slowed to 2% in 1998, -1% in 1999, and -0.5% in 2000. Growth recovered slightly in 2001 to 1%. During the 1990s annual inflation fell to almost 0% from more than 100%. Lebanon has rebuilt much of its war-torn physical and financial infrastructure. The government nonetheless faces serious challenges in the economic arena. It has funded reconstruction by borrowing heavily - mostly from domestic banks. The re-installed HARIIRI government has failed to rein in the ballooning national debt. Without large-scale international aid and rapid privatization of state-owned enterprises, markets may force a currency devaluation and debt default in 2002.

Economy

Economy - overview: Small, landlocked, and mountainous, Lesotho's primary natural resource is water. Its economy is based on subsistence agriculture, livestock, remittances from miners employed in South Africa, and a rapidly growing apparel-assembly sector. The number of mineworkers has declined steadily over the past several years. A small manufacturing base depends largely on farm products that support the milling, canning, leather, and jute industries. Agricultural products are exported primarily to South Africa. Proceeds from membership in a common customs union with South Africa form the majority of government revenue. Although drought has decreased agricultural activity over the past few years, completion of a major hydropower facility in January 1998 now permits the sale of water to South Africa, generating royalties for Lesotho. The pace of privatization has increased in recent years. In December 1999, the government embarked on a nine-month IMF staff-monitored program aimed at structural adjustment and stabilization of macroeconomic fundamentals. The government is in the process of applying for a three-year successor program with the IMF under its Poverty Reduction and Growth Facility. Lesotho has a marked inequality in

income distribution and serious unemployment/underemployment problems that will not yield to short-run solutions.

Liberia

Introduction

Background: Seven years of civil strife were brought to a close in 1996 when free and open presidential and legislative elections were held. President TAYLOR now holds strong executive power with no real political opposition. The years of fighting coupled with the flight of most businesses have disrupted formal economic activity. A still unsettled domestic security situation has slowed the process of rebuilding the social and economic structure of this war-torn country. In 2001, the UN imposed sanctions on Liberian diamonds along with an army embargo and a travel ban on government officials for Liberia's support of the rebel insurgency in Sierra Leone.

Economy

Economy - overview: A civil war in 1989-96 destroyed much of Liberia's economy, especially the infrastructure in and around Monrovia. Many businessmen fled the country, taking capital and expertise with them. Some returned; many will not return. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a producer and exporter of basic products, while local manufacturing, mainly foreign owned, had been small in scope. The democratically elected government, installed in August 1997, inherited massive international debts and currently relies on revenues from its maritime registry and timber industry to provide the bulk of its foreign exchange

earnings. The restoration of the infrastructure and the raising of incomes in this ravaged economy depend on the implementation of sound macro- and micro-economic policies of the new government, including the encouragement of foreign investment. Recent growth has been from a low base, and continued growth will require major policy successes and containment of armed rebellion.

Libya

Introduction

Background: Since he took power in a 1969 military coup, Col. Muammar Abu Minyar al-QADHAFI has espoused his own political system - a combination of socialism and Islam - which he calls the Third International Theory. Viewing himself as a revolutionary leader, he used oil funds during the 1970s and 1980s to promote his ideology outside Libya, even supporting subversives and terrorists abroad to hasten the end of Marxism and capitalism. Libyan military adventures failed, e.g., the prolonged foray of Libyan troops into the Aozou Strip in northern Chad was finally repulsed in 1987. Libyan support for terrorism decreased after UN sanctions were imposed in 1992. Those sanctions were suspended in April 1999.

Economy

Economy - overview: The socialist-oriented economy depends primarily upon revenues from the oil sector, which contributes practically all export earnings and about one-quarter of GDP. These oil revenues and a small population give Libya one of the highest per capita GDPs in Africa, but little of this income flows down to the lower orders of society. Import restrictions and inefficient resource allocations have led to periodic shortages of basic goods and foodstuffs. The nonoil manufacturing and construction sectors, which account for about 20% of GDP, have expanded from processing mostly agricultural products to include the production of petrochemicals, iron, steel, and aluminum. Climatic conditions and poor soils severely limit agricultural output, and Libya imports about 75% of its food. Higher oil prices in 1999 and 2000 led to an increase in export revenues, which improved macroeconomic balances and helped to stimulate the economy. The suspension of UN sanctions in 1999 also boosted growth. Libya's January 2002 51% devaluation of the official exchange rate of the dinar is another fiscal plus, although it will also bring higher inflation.

Liechtenstein

Introduction

Background: The Principality of Liechtenstein was established within the Holy Roman Empire in 1719; it became a sovereign state in 1806. Until the end of World War I, it was closely tied to Austria, but the economic devastation caused by that conflict forced Liechtenstein to conclude a customs and monetary union with Switzerland. Since World War II (in which Liechtenstein remained neutral) the country's low taxes have spurred outstanding economic growth. However, shortcomings in banking regulatory oversight have resulted in concerns about the use of the financial institutions for money laundering.

Economy

Economy - overview: Despite its small size and limited natural resources, Liechtenstein has developed into a prosperous, highly industrialized, free-enterprise economy with a vital financial service sector and living standards on a par with the urban areas of its large European neighbors. Low business taxes - the maximum tax rate is 18% - and easy incorporation rules have induced 73,700 holding or so-called letter box companies to establish nominal offices in Liechtenstein, providing 30% of state revenues. The country participates in a customs union with Switzerland and uses the Swiss franc as its national currency. It imports more than 90% of its energy requirements. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between European Free Trade Association (EFTA) and EU) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe.

Transnational Issues

Disputes - international: Liechtenstein's royal family claims restitution for 1,600 sq km of land in the Czech Republic confiscated in 1918

Illicit drugs: multilateral organizations engaged in issuing international guidelines for financial sector oversight found gaps in Liechtenstein's financial services controls that made it vulnerable to money laundering, but Liechtenstein has become less attractive as a haven for illicit funds, based on implementation in 2001 of new anti-money-laundering legislation and improved mutual legal assistance cooperation with other countries

Lithuania

Introduction

Background: Independent between the two World Wars, Lithuania was annexed by the USSR in 1940. On 11 March 1990, Lithuania became the first of the Soviet republics to declare its independence, but this proclamation was not generally recognized until September of 1991 (following the abortive coup in Moscow). The last Russian troops withdrew in 1993. Lithuania subsequently has restructured its economy for eventual integration into Western European institutions.

Economy

Economy - overview: Lithuania, the Baltic state that has conducted the most trade with Russia, has been slowly rebounding from the 1998 Russian financial crisis. High unemployment, at 12.5% in 2001, and weak consumption have held back recovery. Trade has been increasingly oriented toward the West. Lithuania has gained membership in the World Trade Organization and has moved ahead with plans to join the EU. Privatization of the large, state-owned utilities, particularly in the energy sector, is underway.

Luxembourg

Introduction

Background: Founded in 963, Luxembourg became a grand duchy in 1815 and an independent state under the Netherlands. It lost more than half of its territory to Belgium in 1839, but gained a larger measure of autonomy. Full independence was attained in 1867. Overrun by Germany in both World Wars, it ended its neutrality in 1948 when it entered into the Benelux Customs Union and when it joined NATO the following year. In 1957, Luxembourg became one of the six founding countries of the European Economic Community (later the European Union) and in 1999 it joined the euro currency area.

Economy

Economy - overview: This stable, high-income economy features solid growth, low inflation, and low unemployment. The industrial sector, initially dominated by steel, has become increasingly diversified to include chemicals, rubber, and other products. Growth in the financial sector has more than compensated for the decline in steel. Services, especially banking, account for a substantial proportion of the economy. Agriculture is based on small family-owned farms. The economy depends on foreign and trans-border workers for 30% of its labor force. Although Luxembourg, like all EU members, has suffered from the global economic slump, the country has maintained a fairly robust growth rate. On 1 January 2002, Luxembourg - together with 11 of its EU partners - began to replace its circulating national currency with the euro.

Macau (special administrative region of China)

Introduction

Background: Colonized by the Portuguese in the 16th century, Macau was the first European settlement in the Far East. Pursuant to an agreement signed by China and Portugal on 13 April 1987, Macau became the Macau Special Administrative Region (SAR) of China on 20 December 1999. China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be practiced in Macau and that Macau will enjoy a high degree of autonomy in all matters except foreign and defense affairs.

Economy

Economy - overview: Macau's economy two years after reversion to China remains one of the most open in the world, according to the World Trade Organization. The government collects no duty on imports and sets no restrictions on exports beyond those required by international agreements. The territory's net exports of goods and services account for 35% of GDP, with tourism and apparel exports as the mainstays. The territory therefore has been hit hard by the 2001 downturn in its key US and EU export markets. Tourism remained strong, however, driven by a surge in visitors from mainland China. In response to the expected contraction of the economy in 2002, the government has announced a stimulative income tax cut and public works program that will push the budget into deficit. China already has extended support by easing restrictions on travel to Macau and is proposing a China-Hong Kong-Macau free trade area. China's economic weight is increasingly felt, with the mainland now holding more than 50% of assets in the financial, real estate, and construction sectors. Mainlanders, however, have been excluded from bidding on the gambling industry licenses that Macau is offering to break up the territory's four-decade-old gambling monopoly. Gambling taxes account for up to 60% of revenue, and the government with Beijing's backing intends to revitalize the industry.

Macedonia, The Former Yugoslav Republic of

Introduction

Background: International recognition of The Former Yugoslav Republic of Macedonia's (F.Y.R.O.M.) independence from Yugoslavia in 1991 was delayed by Greece's objection to the new state's use of what it considered a Hellenic name and symbols. Greece finally lifted its trade blockade in 1995, and the two countries agreed to normalize relations, despite continued disagreement over F.Y.R.O.M.'s use of "Macedonia." F.Y.R.O.M.'s large Albanian minority, an ethnic Albanian armed insurgency in F.Y.R.O.M. in 2001, and the status of neighboring Kosovo continue to be sources of ethnic tension.

Economy

Economy - overview: At independence in November 1991, Macedonia was the least developed of the Yugoslav republics, producing a mere 5% of the total federal output of goods and services. The collapse of Yugoslavia ended transfer payments from the center and eliminated advantages from inclusion in a de facto free trade area. An absence of infrastructure, UN sanctions on Yugoslavia, one of its largest markets, and a Greek economic embargo over a dispute about the country's constitutional name and flag hindered economic growth until 1996. GDP subsequently rose each year through 2000. However, the leadership's commitment to economic reform, free trade, and regional integration was undermined by the ethnic Albanian insurgency of 2001. The economy shrank about 4% because of decreased trade, intermittent border closures, increased deficit spending on security needs, and investor uncertainty. The international community hopes to restart growth with a donors' conference in 2002.

Madagascar

Introduction

Background: Formerly an independent kingdom, Madagascar became a French colony in 1886, but regained its independence in 1960. During 1992-93, free presidential and National Assembly elections were held, ending 17 years of single-party rule. In 1997, in the second presidential race, Didier RATSIRAKA, the leader during the 1970s and 1980s, was returned to the presidency. The 2001 presidential election was contested between the followers of Didier RATSIRAKA and Marc RAVALOMANANA, nearly causing secession of half of the country. In April 2002 the High Constitutional Court announced RAVALOMANANA the winner.

Economy

Economy - overview: Madagascar faces problems of chronic malnutrition, underfunded health and education facilities, a roughly 3% annual population growth rate, and severe loss of forest cover, accompanied by erosion. Agriculture, including fishing and forestry, is the mainstay of the economy, accounting for one-third of GDP and contributing more than 70% to export earnings. Industry features textile manufacturing and the processing of agricultural products. Growth in output in 1992-97 averaged less than the growth rate of the population. Growth has been held back by antigovernment strikes and demonstrations, a decline in world coffee prices, and the erratic commitment of the government to economic reform. The extent of government reforms, outside financial aid, and foreign investment will be key determinants of future growth.

Malawi

Introduction

Background: Established in 1891, the British protectorate of Nyasaland became the independent nation of Malawi in 1964. After three decades of one-party rule, the country held multiparty elections in 1994 under a provisional constitution, which took full effect the following year. National multiparty elections were held again in 1999.

Economy

Economy - overview: Landlocked Malawi ranks among the world's least developed countries. The economy is predominately agricultural, with about 90% of the population living in rural areas. Agriculture accounts for 40% of GDP and 88% of export revenues. The economy depends on substantial inflows of economic assistance from the IMF, the World Bank, and individual donor nations. In late 2000, Malawi was approved for relief under the Heavily Indebted Poor Countries (HIPC) program. The government faces strong challenges, e.g., to fully

develop a market economy, to improve educational facilities, to face up to environmental problems, and to deal with the rapidly growing problem of HIV/AIDS.

The performance of the tobacco sector is key to short-term growth.

Economy

Economy - overview: Malaysia, a middle income country, transformed itself from 1971 through the late 1990s from a producer of raw materials into an emerging multi-sector economy. Growth is almost exclusively driven by exports - particularly of electronics - and, as a result Malaysia was hard hit by the global economic downturn and the slump in the Information Technology (IT) sector in 2001. GDP in 2001 grew only 0.3% due to an estimated 11% contraction in exports, but a substantial fiscal stimulus package has mitigated the worst of the recession and the economy is expected to grow by 2% to 3% in 2002 as the world economy rebounds. Kuala Lumpur's healthy foreign exchange reserves and relatively small external debt make it unlikely that Malaysia will experience a crisis similar to the crisis of 1997, but the economy remains vulnerable to a more protracted downturn in the US and Japan, top export destinations and key sources of foreign investment.

Economy

Economy - overview: Tourism, Maldives largest industry, accounts for 20% of GDP and more than 60% of the Maldives' foreign exchange receipts. Over 90% of government tax revenue comes from import duties and tourism-related taxes. Almost 400,000 tourists visited the islands in 1998. Fishing is a second leading sector. The Maldivian Government began an economic reform program in 1989 initially by lifting import quotas and opening some exports to the private sector. Subsequently, it has liberalized regulations to allow more foreign investment. Agriculture and manufacturing continue to play a minor role in the economy, constrained by the limited availability of cultivable land and the shortage of domestic labor. Most staple foods must be imported. Industry, which consists mainly of garment production, boat building, and handicrafts, accounts for about 18% of GDP. Maldivian authorities worry about the impact of erosion and possible global warming on their low-lying country; 80% of the area is one meter or less above sea level.

Mali

Introduction

Background: The Sudanese Republic and Senegal became independent of France in 1960 as the Mali Federation. When Senegal withdrew after only a few months, the Sudanese Republic was renamed Mali. Rule by dictatorship was brought to a close in 1991 with a transitional government, and in 1992 when Mali's first democratic presidential election was held. Since his reelection in 1997, President KONARE continued to push through political and economic reforms and to fight corruption. In 1999 he indicated he would not run for a third term, in keeping with the Malian constitution's two-term limit.

Economy

Economy - overview: Mali is among the poorest countries in the world, with 65% of its land area desert or semidesert. Economic activity is largely confined to the riverine area irrigated by the Niger. About 10% of the population is nomadic and some 70% of the labor force is engaged in farming and fishing. Industrial activity is concentrated on processing farm commodities. Mali is heavily dependent on foreign aid

and vulnerable to fluctuations in world prices for cotton, its main export. In 1997, the government continued its successful implementation of an IMF-recommended structural adjustment program that is helping the economy grow, diversify, and attract foreign investment. Mali's adherence to economic reform and the 50% devaluation of the African franc in January 1994 have pushed up economic growth to a sturdy 5% average in 1996-2000. In 2001, GDP decreased by 1.2% mainly due to a 50% drop in cotton production in 2000-01.

Malta

Introduction

Background: Great Britain formally acquired possession of Malta in 1814. The island staunchly supported the UK through both World Wars and remained in the Commonwealth when it became independent in 1964. A decade later Malta became a republic. Over the last 15 years, the island has become a freight transshipment point, financial center, and tourist destination. It is an official candidate for EU membership.

Economy

Economy - overview: Major resources are limestone, a favorable geographic location, and a productive labor force. Malta produces only about 20% of its food needs, has limited freshwater supplies, and has no domestic energy sources. The economy is dependent on foreign trade, manufacturing (especially electronics and textiles), and tourism. Malta is privatizing state-controlled firms and liberalizing markets in order to prepare for membership in the European Union and is expected to complete EU accession negotiations in 2002. The island is divided politically, however, over the question of joining the EU.

Economy - overview: Offshore banking, manufacturing, and tourism are key sectors of the economy. The government's policy of offering incentives to high-technology companies and financial institutions to locate on the island has paid off in expanding employment opportunities in high-income industries. As a result, agriculture and fishing, once the mainstays of the economy, have declined in their shares of GDP. Trade is mostly with the UK. The Isle of Man enjoys free access to EU markets. **GDP:** purchasing power parity - \$1.4 billion (1999 est.)

Marshall Islands

Introduction

Background: After almost four decades under US administration as the easternmost part of the UN Trust Territory of the Pacific Islands, the Marshall Islands attained independence in 1986 under a Compact of Free Association. Compensation claims continue as a result of US nuclear testing on some of the atolls between 1947 and 1962. The Marshall Islands have been home to the US Army Base Kwajalein (USAKA) since 1964.

Geography

Location: Oceania, group of atolls and reefs in the North Pacific Ocean, about one-half of the way from Hawaii to Australia

Geographic coordinates: 9 00 N, 168 00 E

Economy

Economy - overview: US Government assistance is the mainstay of this tiny island economy. Agricultural production is primarily subsistence and is concentrated on small farms; the most important commercial crops are coconuts and breadfruit.

Small-scale industry is limited to handicrafts, tuna processing, and copra. The tourist industry, now a small source of foreign exchange employing less than 10% of the labor force, remains the best hope for future added income. The islands have few natural resources, and imports far exceed exports. Under the terms of the Compact of Free Association, the US provides roughly \$39 million in annual aid.

Negotiations have continued for an extended agreement. Government downsizing, drought, a drop in construction, the decline in tourism and foreign investment due to the Asian financial difficulties, and less income from the renewal of fishing vessel licenses have held GDP growth to an average of 1% over the past decade.

Economy

Economy - overview: The economy is based on sugarcane, bananas, tourism, and light industry. Agriculture accounts for about 6% of GDP and the small industrial sector for 11%. Sugar production has declined, with most of the sugarcane now used for the production of rum. Banana exports are increasing, going mostly to France. The bulk of meat, vegetable, and grain requirements must be imported, contributing to a chronic trade deficit that requires large annual transfers of aid from France. Tourism, which employs more than 11,000 people, has become more important than agricultural exports as a source of foreign exchange. The majority of the work force is employed in the service sector and in administration.

Mauritania

Introduction

Background: Independent from France in 1960, Mauritania annexed the southern third of the former Spanish Sahara (now Western Sahara) in 1976, but relinquished it after three years of raids by the Polisario guerrilla front seeking independence for the territory. Opposition parties were legalized and a new constitution approved in 1991. Two multiparty presidential elections since then were widely seen as flawed, but October 2001 legislative and municipal elections were generally free and open. Mauritania remains, in reality, a one-party state. The country continues to experience ethnic tensions between its black minority population and the dominant Maur (Arab-Berber) populace.

Economy

Economy - overview: Half the population still depends on agriculture and livestock for a livelihood, even though most of the nomads and many subsistence farmers were forced into the cities by recurrent droughts in the 1970s and 1980s.

Mauritania has extensive deposits of iron ore, which account for half of total exports. The decline in world demand for this ore, however, has led to cutbacks in production. The nation's coastal waters are among the richest fishing areas in the world, but overexploitation by foreigners threatens this key source of revenue.

The country's first deepwater port opened near Nouakchott in 1986. In the past, drought and economic mismanagement resulted in a buildup of foreign debt. In February, 2000, Mauritania qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative and in December 2001 received strong support from donor and lending countries at a triennial Consultative Group review.

Mauritania withdrew its membership in the Economic Community of West African States (ECOWAS) in 2000 and subsequently increased commercial ties with Arab Maghreb Union members Morocco and Tunisia, most notably in telecommunications. In 2001, exploratory oil wells in tracts 80 km offshore indicated potential viable extraction at current world oil prices. However, the refinery in Nouadhibou historically has not exceeded 20% of its distillation capacity, and it handled no crude in the year 2000. A new Investment Code approved in December 2001 improved the opportunities for direct foreign investment.

Mauritius

Introduction

Background: Discovered by the Portuguese in 1505, Mauritius was subsequently held by the Dutch, French, and British before independence was attained in 1968. A stable democracy with regular free elections and a positive human rights record, the country has attracted considerable foreign investment and has earned one of Africa's highest per capita incomes. Recent poor weather and declining sugar prices have slowed economic growth leading to some protests over standards of living in the Creole community.

Economy

Economy - overview: Since independence in 1968, Mauritius has developed from a low-income, agriculturally based economy to a middle-income diversified economy with growing industrial, financial, and tourist sectors. For most of the period, annual growth has been in the order of 5% to 6%. This remarkable achievement has been reflected in more equitable income distribution, increased life expectancy, lowered infant mortality, and a much improved infrastructure. Sugarcane is grown on about 90% of the cultivated land area and accounts for 25% of export earnings. The government's development strategy centers on foreign investment. Mauritius has attracted more than 9,000 offshore entities, many aimed at commerce in India and South Africa, and investment in the banking sector alone has reached over \$1 billion. Mauritius, with its strong textile sector and responsible fiscal management, was well-poised to take advantage of the Africa Growth and Opportunity Act (AGOA).

Mexico

Introduction

Background: The site of advanced Amerindian civilizations, Mexico came under Spanish rule for three centuries before achieving independence early in the 19th century. A devaluation of the peso in late 1994 threw Mexico into economic turmoil, triggering the worst recession in over half a century. The nation continues to make an impressive recovery. Ongoing economic and social concerns include low real wages, underemployment for a large segment of the population, inequitable income distribution, and few advancement opportunities for the largely Amerindian population in the impoverished southern states. Elections held in July 2000 marked the first time since the 1910 Mexican Revolution that the opposition defeated the party in government, the Institutional Revolutionary Party (PRI). Vicente FOX of the National Action Party (PAN) was sworn in on 1 December 2000 as the first chief executive elected in free and fair elections.

Economy

Economy - overview: Mexico has a free market economy with a mixture of modern and outmoded industry and agriculture, increasingly dominated by the private sector. Recent administrations have expanded competition in seaports, railroads, telecommunications, electricity, natural gas distribution, and airports. Income distribution remains highly unequal. Trade with the US and Canada has tripled since the implementation of NAFTA in 1994. Following 6.9% growth in 2000, real GDP fell 0.3% in 2001, with the US slowdown the principal cause. Positive developments in 2001 included a drop in inflation to 6.5%, a sharp fall in interest rates, and a strong peso that appreciated 5% against the dollar. Mexico City implemented free trade agreements with Guatemala, Honduras, El Salvador, and the European Free Trade Area in 2001, putting more than 90% of trade under free trade agreements. Foreign direct investment reached \$25 billion in 2001, of which \$12.5 billion came from the purchase of Mexico's second largest bank, Banamex, by Citigroup.

Illicit drugs: illicit cultivation of opium poppy (cultivation in 2001 - 4,400 hectares; potential heroin production - 7 metric tons) and cannabis cultivation in 2001 - 4,100 hectares; government eradication efforts have been key in keeping illicit crop levels low; major supplier of heroin and largest foreign supplier of marijuana and methamphetamine to the US market; continues as the primary transshipment country for US-bound cocaine from South America; major drug syndicates control majority of drug trafficking throughout the country; growing producer and distributor of ecstasy

Micronesia, Federated States of

Introduction

Background: In 1979 the Federated States of Micronesia, a UN Trust Territory under US administration, adopted a constitution. In 1986 independence was attained under a Compact of Free Association with the US. Present concerns include large-scale unemployment, overfishing, and overdependence on US aid.

Economy

Economy - overview: Economic activity consists primarily of subsistence farming and fishing. The islands have few mineral deposits worth exploiting, except for high-grade phosphate. The potential for a tourist industry exists, but the remote location and a lack of adequate facilities hinder development. In 1996, the country experienced a 20% reduction in revenues from the Compact of Free Association - the agreement with the US in which Micronesia received \$1.3 billion in financial and technical assistance over a 15-year period until 2001. Since these revenues accounted for 57% of consolidated government revenues, reduced Compact funding resulted in a severe depression. Economic activity recovered in 1999-2001. The country's medium-term economic outlook appears fragile due to likely further reductions in external grants made under the US Compact funding. Geographical isolation and a poorly developed infrastructure remain major impediments to long-term growth.

Introduction

Background: The US took formal possession of the islands in 1867. The laying of the trans-Pacific cable, which passed through the islands, brought the first residents in 1903. Between 1935 and 1947, Midway was used as a refueling stop for trans-Pacific flights. The US naval victory over a Japanese fleet off Midway in 1942 was one of the turning points of World War II. The islands continued to serve as a naval station until closed in 1993. Today the islands are a national wildlife refuge. From 1996 to 2001 the refuge was open to the public. It is now temporarily closed.

Moldova

Introduction

Background: Formerly ruled by Romania, Moldova became part of the Soviet Union at the close of World War II. Although independent from the USSR since 1991, Russian forces have remained on Moldovan territory east of the Dniester River supporting the Slavic majority population, mostly Ukrainians and Russians, who have proclaimed a "Transnistria" republic. One of the poorest nations in Europe, Moldova became the first former Soviet state to elect a Communist as its president in 2001.

Economy

Economy - overview: Moldova enjoys a favorable climate and good farmland but has no major mineral deposits. As a result, the economy depends heavily on agriculture, featuring fruits, vegetables, wine, and tobacco. Moldova must import all of its supplies of oil, coal, and natural gas, largely from Russia. Energy shortages contributed to sharp production declines after the breakup of the Soviet Union in 1991. As part of an ambitious reform effort, Moldova introduced a convertible currency, freed all prices, stopped issuing preferential credits to state enterprises, backed steady land privatization, removed export controls, and freed interest rates. Yet these efforts could not offset the impact of political and economic difficulties, both internal and regional. In 1998, the economic troubles of Russia, by far Moldova's leading trade partner, were a major cause of the 8.6% drop in GDP. In 1999, GDP fell again, by 4.4%, the fifth drop in the past seven years; exports were down, and energy supplies continued to be erratic. Following the return to positive GDP growth in 2000 (1.9%), Moldova experienced strong 6.1% rise in GDP in 2001, driven by a marked improvement in industry and a 20% improvement in agriculture.

Economy

Economy - overview: Monaco, situated on the French Mediterranean coast, is a popular resort, attracting tourists to its casino and pleasant climate. In 2001, a major new construction project will extend the pier used by cruise ships in the main harbor. The Principality has successfully sought to diversify into services and small, high-value-added, nonpolluting industries. The state has no income tax and low business taxes and thrives as a tax haven both for individuals who have established residence and for foreign companies that have set up businesses and offices. The state retains monopolies in a number of sectors, including tobacco, the telephone network, and the postal service. Living standards are high, roughly comparable to those in prosperous French metropolitan areas. Monaco does not publish national income figures; the estimates below are extremely rough.

Mongolia

Introduction

Background: The Mongols entered history in the 13th century when under GENGHIS KHAN they conquered a huge Eurasian empire. After his death the empire was divided into several powerful Mongol states, but these broke apart in the 14th century. The Mongols eventually retired to their original steppe homelands and came under Chinese rule. Mongolia won its independence in 1921 with Soviet backing. A Communist regime was installed in 1924. During the early 1990s, the ex-Communist Mongolian People's Revolutionary Party (MPRP) gradually yielded its monopoly on power to the Democratic Union Coalition (DUC), which defeated the MPRP in a national election in 1996. Over the next four years the DUC put forward a number of key reforms to modernize the economy and democratize the political system. However, the former Communists were a strong opposition that stalled additional restructuring and made implementation difficult. In 2000, the MPRP won an overwhelming victory in the legislature - with 72 of the 76 seats - and completely reshuffled the government. While it continues many of the reform policies, the MPRP is focusing on social welfare and public order priorities.

Economy

Economy - overview: Economic activity traditionally has been based on agriculture and breeding of livestock. Mongolia also has extensive mineral deposits: copper, coal, molybdenum, tin, tungsten, and gold account for a large part of industrial production. Soviet assistance, at its height one-third of GDP, disappeared almost overnight in 1990-91, at the time of the dismantlement of the USSR. Mongolia has driven into deep recession, prolonged by the Mongolian People's Revolutionary Party's (MPRP) reluctance to undertake serious economic reform. The Democratic Coalition (DC) government has embraced free-market economics, easing price controls, liberalizing domestic and international trade, and attempting to restructure the banking system and the energy sector. Major domestic privatization programs were undertaken, as well as the fostering of foreign investment through international tender of the oil distribution company, a leading cashmere company, and banks. Reform was held back by the ex-Communist MPRP opposition and by the political instability brought about through four successive governments under the DC. Economic growth picked up in 1997-99 after stalling in 1996 due to a series of natural disasters and declines in world prices of copper and cashmere. In August and September 1999, the economy suffered from a temporary Russian ban on exports of oil and oil products, and Mongolia remains vulnerable in this sector. Mongolia joined the World Trade Organization (WTO) in 1997. The international donor community pledged over \$300 million per year at the last Consultative Group Meeting, held in Ulaanbaatar in June 1999. The MPRP government, elected in July 2000, is anxious to

Mongolia (continued)

improve the investment climate; it must also deal with a heavy burden of external debt. Falling prices for Mongolia's mainly primary sector exports, widespread opposition to privatization, and adverse effects of weather on agriculture in early 2000 and 2001 restrained real GDP growth in 2000-01.

Economy

Economy - overview: Severe volcanic activity, which began in July 1995, has put a damper on this small, open economy. A catastrophic eruption in June 1997 closed the airports and seaports, causing further economic and social dislocation. Two-thirds of the 12,000 inhabitants fled the island. Some began to return in 1998, but lack of housing limited the number. The agriculture sector continued to be affected by the lack of suitable land for farming and the destruction of crops. Prospects for the economy depend largely on developments in relation to the volcano and on public sector construction activity. The UK has launched a three-year \$122.8 million aid program to help reconstruct the economy. Half of the island is expected to remain uninhabitable for another decade.

Morocco

Introduction

Background: Morocco's long struggle for independence from France ended in 1956. The internationalized city of Tangier was turned over to the new country that same year. Morocco virtually annexed Western Sahara during the late 1970s, but final resolution on the status of the territory remains unresolved. Gradual political reforms in the 1990s resulted in the establishment of a bicameral legislature in 1997.

Economy

Economy - overview: Morocco faces the problems typical of developing countries - restraining government spending, reducing constraints on private activity and foreign trade, and achieving sustainable economic growth. Following structural adjustment programs supported by the IMF, World Bank, and the Paris Club, the dirham is now fully convertible for current account transactions, and reforms of the financial sector have been implemented. Droughts depressed activity in the key agricultural sector and contributed to a stagnant economy in 1999 and 2000. During that time, however, Morocco reported large foreign exchange inflows from the sale of a mobile telephone license and partial privatization of the state-owned telecommunications company. Favorable rainfall in 2001 led to a growth of 5%. Formidable long-term challenges include: servicing the external debt; preparing the economy for freer trade with the EU; and improving education and attracting foreign investment to boost living standards and job prospects for Morocco's youth.

Disputes - International: claims and administers Western Sahara, but sovereignty remains unresolved; UN-administered cease-fire has remained in effect since September 1991, but attempts to hold a referendum have failed and parties reject other proposals; Spain controls three small possessions off the coast of Morocco - the islands of Penon de Alhucemas, Penon de Velez de la Gomera, and Islas Chafarinas and two autonomous communities on the coast of Morocco - Ceuta and Melilla; Morocco rejected Spain's unilateral designation of a median line from the Canary Islands in 2002 to explore undersea resources and to interdict illegal refugees from Africa

Illicit drugs: illicit producer of hashish; trafficking increasing for both domestic and international drug markets; shipments of hashish mostly directed to Western Europe; transit point for cocaine from South America destined for Western Europe

Mozambique

Introduction

Background: Almost five centuries as a Portuguese colony came to a close with independence in 1975. Large-scale emigration by whites, economic dependence on South Africa, a severe drought, and a prolonged civil war hindered the country's development. The ruling party formally abandoned Marxism in 1989, and a new constitution the following year provided for multiparty elections and a free market economy. A UN-negotiated peace agreement with rebel forces ended the fighting in 1992.

Economy

Economy - overview: At independence in 1975, Mozambique was one of the world's poorest countries. Socialist mismanagement and a brutal civil war from 1977-92 exacerbated the situation. In 1988, the government embarked on a series of dramatic macroeconomic reforms designed to stabilize the economy and reduce government participation. These steps combined with the political stability that has prevailed since the 1994 multi-party elections have led to dramatic improvements in the country's growth rate fueled by foreign and domestic investments and donor assistance. Inflation was brought to single digits during the same period, although it has returned to double digits in 2000 and 2001. Foreign exchange rates have remained relatively stable. Fiscal reforms, including the introduction of a value-added tax and reform of the customs service, have improved the government's revenue collection abilities. In spite of these gains, Mozambique remains dependent upon foreign assistance for much of its annual budget, and the majority of the population remains below the poverty line. Subsistence agriculture continues to employ the vast majority of the country's workforce. A substantial trade imbalance persists, although it has diminished with the opening of the MOZAL aluminum smelter, the country's largest foreign investment project. Additional investment projects in titanium extraction/processing and garment manufacturing should further close the import/export gap. Mozambique's once substantial foreign debt has been reduced through forgiveness and rescheduling under the IMF's Heavily Indebted Poor Countries (HIPC) and Enhanced HIPC initiatives, and is now at a manageable level.

Namibia

Introduction

Background: South Africa occupied the German colony of South-West Africa during World War I and administered it as a mandate until after World War II when it annexed the territory. In 1966 the Marxist South-West Africa People's Organization (SWAPO) guerrilla group launched a war of independence for the area that was soon named Namibia, but it was not until 1988 that South Africa agreed to end its administration in accordance with a UN peace plan for the entire region. Independence came in 1990.

Economy

Economy - overview: The economy is heavily dependent on the extraction and processing of minerals for export. Mining accounts for 20% of GDP. Namibia is the fourth-largest exporter of nonfuel minerals in Africa and the world's fifth-largest producer

of uranium. Rich alluvial diamond deposits make Namibia a primary source for gem-quality diamonds. Namibia also produces large quantities of lead, zinc, tin, silver, and tungsten. About half of the population depends on agriculture (largely subsistence agriculture) for its livelihood. Namibia must import some of its food. Although per capita GDP is five times the per capita GDP of Africa's poorest countries, the majority of Namibia's people live in pronounced poverty because of large-scale unemployment, the great inequality of income distribution, and the large amount of wealth going to foreigners. The Namibian economy has close links to South Africa. Agreement has been reached on the privatization of several more enterprises in coming years, which should stimulate long-run foreign investment.

Nauru

Introduction

Background: Nauru's phosphate deposits began to be mined early in the 20th century by a German-British consortium; the island was occupied by Australian forces in World War I. Nauru achieved independence in 1968 and joined the UN in 1999. Nauru is the world's smallest independent republic.

Economy

Economy - overview: Revenues of this tiny island have come from exports of phosphates, but reserves are expected to be exhausted within a few years. Phosphate production has declined since 1989, as demand has fallen in traditional markets and as the marginal cost of extracting the remaining phosphate increases, making it less internationally competitive. While phosphates have given Nauruans one of the highest per capita incomes in the Third World, few other resources exist with most necessities being imported, including fresh water from Australia. The rehabilitation of mined land and the replacement of income from phosphates are serious long-term problems. In anticipation of the exhaustion of Nauru's phosphate deposits, substantial amounts of phosphate income have been invested in trust funds to help cushion the transition and provide for Nauru's economic future. The government has been borrowing heavily from the trusts to finance fiscal deficits. To cut costs the government has called for a freeze on wages, a reduction of over-staffed public service departments, privatization of numerous government agencies, and closure of some overseas consulates. In recent years Nauru has encouraged the registration of offshore banks and corporations. Tens of billions of dollars have been channeled through their accounts. Few comprehensive statistics on the Nauru economy exist, with estimates of Nauru's per capita GDP varying widely.

Navassa Island

(territory of the US)

Introduction

Background: This uninhabited island was claimed by the US in 1857 for its guano, and mining took place between 1865 and 1898. The lighthouse, built in 1917, was shut down in 1996 and administration of Navassa Island transferred from the Coast Guard to the Department of the Interior. A 1998 scientific expedition to the island described it as a unique preserve of Caribbean biodiversity; the following year it became a National Wildlife Refuge.

Nepal

Introduction

Background: In 1951, the Nepalese monarch ended the century-old system of rule by hereditary premiers and instituted a cabinet system of government. Reforms in 1990 established a multiparty democracy within the framework of a constitutional monarchy. The refugee issue of some 100,000 Bhutanese in Nepal remains unresolved; 90% of these displaced persons are housed in seven United Nations Offices of the High Commissioner for Refugees (UNHCR) camps.

Economy

Economy - overview: Nepal is among the poorest and least developed countries in the world with nearly half of its population living below the poverty line. Agriculture is the mainstay of the economy, providing a livelihood for over 80% of the population and accounting for 41% of GDP. Industrial activity mainly involves the processing of agricultural produce including jute, sugarcane, tobacco, and grain. Textile and carpet production, accounting for about 80% of foreign exchange earnings in recent years, contracted significantly in 2001 due to the overall slowdown in the world economy and pressures by Maoist insurgents on factory owners and workers. Security concerns in the wake of Maoist activity, the June massacre of many members of the royal family, and the September 11 terrorist attacks in the US led to a decrease in tourism, another key source of foreign exchange. Agricultural production is growing by about 5% on average as compared with annual population growth of 2.3%. Since May 1991, the government has been moving forward with economic reforms, particularly those that encourage trade and foreign investment, e.g., by reducing business licenses and registration requirements to simplify investment procedures. The government has also been cutting expenditures by reducing subsidies, privatizing state industries, and laying off civil servants. More recently, however, political instability - five different governments over the past few years - has hampered Kathmandu's ability to forge consensus to implement key economic reforms. Nepal has considerable scope for accelerating economic growth by exploiting its potential in hydropower and tourism, areas of recent foreign investment interest. Prospects for foreign

trade or investment in other sectors will remain poor, however, because of the small size of the economy, its technological backwardness, its remoteness, its landlocked geographic location, and its susceptibility to natural disaster. The international community's role of funding more than 60% of Nepal's development budget and more than 28% of total budgetary expenditures will likely continue as a major ingredient of growth.

Economy

Economy - overview: The Netherlands is a prosperous and open economy depending heavily on foreign trade. The economy is noted for stable industrial relations, moderate inflation, a sizable current account surplus, and an important role as a European transportation hub. Industrial activity is predominantly in food processing, chemicals, petroleum refining, and electrical machinery. A highly mechanized agricultural sector employs no more than 4% of the labor force but provides large surpluses for the food-processing industry and for exports. The Netherlands, along with 11 of its EU partners, began circulating the euro currency on 1 January 2002. The country continues to be one of the leading European nations for attracting foreign direct investment. Economic growth slowed considerably in 2001, as part of the global economic slowdown, but for the four years before that, annual growth averaged nearly 4%, well above the EU average.

Netherlands Antilles

(part of the Kingdom of the Netherlands)

Introduction

Background: Once the center of the Caribbean slave trade, the island of Curacao was hard hit by the abolition of slavery in 1863. Its prosperity (and that of neighboring Aruba) was restored in the early 20th century with the construction of oil refineries to service the newly discovered Venezuelan oil fields. The island of Saint Martin is shared with France; its northern portion is named Saint-Martin and is part of Guadeloupe, and its southern portion is named Sint Maarten and is part of the Netherlands Antilles.

Economy

Economy - overview: Tourism, petroleum refining, and offshore finance are the mainstays of this small economy, which is closely tied to the outside world. Although GDP has declined in each of the past five years, the islands enjoy a high per capita income and a well-developed infrastructure compared with other countries in the region. Almost all consumer and capital goods are imported, the US and Mexico being

the major suppliers. Poor soils and inadequate water supplies hamper the development of agriculture.

New Caledonia

(overseas territory of France)

Introduction

Background: Settled by both Britain and France during the first half of the 19th century, the island was made a French possession in 1853. It served as a penal colony for four decades after 1864. Agitation for independence during the 1980s and early 1990s seems to have dissipated.

Economy

Economy - overview: New Caledonia has about 25% of the world's known nickel resources. In recent years, the economy has suffered because of depressed international demand for nickel, the principal source of export earnings. Only a small amount of the land is suitable for cultivation, and food accounts for about 20% of imports. In addition to nickel, the substantial financial support from France and tourism are keys to the health of the economy. The situation in 1998 was clouded by the spillover of financial problems in East Asia and by lower prices for nickel. Nickel prices jumped in 1999-2000, and large additions were made to capacity. Strikes in the building industry in 2001, which lasted four months, adversely affected many other sectors of the economy. French Government interests in the New Caledonian nickel industry are being transferred to local ownership.

Economy

Economy - overview: Since 1984 the government has accomplished major economic restructuring, transforming New Zealand from an agrarian economy dependent on concessionary British market access to a more industrialized, free market economy that can compete globally. This dynamic growth has boosted real incomes (but left behind many at the bottom of the ladder), broadened and deepened the technological capabilities of the industrial sector, and contained inflationary pressures. While per capita incomes have been rising, however, they remain below the level of the four largest EU economies, and there is some government concern that New Zealand is not closing the gap. New Zealand is heavily dependent on trade - particularly in agricultural products - to drive growth,

and it has been affected by the global economic slowdown and the slump in commodity prices. Thus far the New Zealand economy has been relatively resilient, achieving about 3% growth in 2001, but the New Zealand business cycle tends to lag the US cycle by about six months, so the worst of the downturn may not hit until mid-2002.

Nicaragua

Introduction

Background: Settled as a colony of Spain in the 1520s, Nicaragua gained its independence in 1821. Violent opposition to governmental manipulation and corruption spread to all classes by 1978 and resulted in a short-lived civil war that brought the Marxist Sandinista guerrillas to power in 1979. Nicaraguan aid to leftist rebels in El Salvador caused the US to sponsor anti-Sandinista contra guerrillas through much of the 1980s. Free elections in 1990, 1996, and again in 2001 saw the Sandinistas defeated. The country has slowly rebuilt its economy during the 1990s, but was hard hit by Hurricane Mitch in 1998.

Economy

Economy - overview: Nicaragua, one of the hemisphere's poorest countries, faces low per capita income, flagging socio-economic indicators, and huge external debt. Distribution of income is extremely unequal. While the country has made progress toward macroeconomic stabilization over the past few years, a banking crisis and scandal has shaken the economy. Managua will continue to be dependent on international aid and debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. Donors have made aid conditional on improving governability, the openness of government financial operation, poverty alleviation, and human rights. Nicaragua met the conditions for additional debt service relief in December 2000. Growth should move up in 2002 because of increased private investment and recovery in the global economy.

Niger

Introduction

Background: Not until 1993, 35 years after independence from France, did Niger hold its first free and open elections. A 1995 peace accord ended a five-year Tuareg insurgency in the north. Coups in 1996 and 1999 were followed by the creation of a National Reconciliation Council that effected a transition to civilian rule by December 1999.

Economy

Economy - overview: Niger is a poor, landlocked Sub-Saharan nation. whose economy centers on subsistence agriculture, animal husbandry, reexport trade, and increasingly less on uranium, because of declining world demand. The 50% devaluation of the West African franc in January 1994 boosted exports of livestock, cowpeas, onions, and the products of Niger's small cotton industry. The government relies on bilateral and multilateral aid - which was suspended following the April 1999 coup d'etat - for operating expenses and public investment. In 2000-01, the World Bank approved a structural adjustment loan of \$105 million to help support fiscal reforms. However, reforms could prove difficult given the government's bleak financial situation. The IMF approved a \$73 million poverty reduction and growth facility for Niger in 2000 and announced \$115 million in debt relief under the Heavily Indebted Poor Countries (HIPC) initiative.

Nigeria

Introduction

Background: Following nearly 16 years of military rule, a new constitution was adopted in 1999, and a peaceful transition to civilian government was completed. The president faces the daunting task of rebuilding a petroleum-based economy, whose revenues have been squandered through corruption and mismanagement, and institutionalizing democracy. In addition, the OBASANJO administration must defuse longstanding ethnic and religious tensions, if it is to build a sound foundation for economic growth and political stability.

Economy

Economy - overview: The oil-rich Nigerian economy, long hobbled by political instability, corruption, and poor macroeconomic management, is undergoing substantial economic reform under the new civilian administration. Nigeria's former military rulers failed to diversify the economy away from overdependence on the capital-intensive oil sector,

which provides 20% of GDP, 95% of foreign exchange earnings, and about 65% of budgetary revenues. The largely subsistence agricultural sector has failed to keep up with rapid population growth, and Nigeria, once a large net exporter of food, now must import food. Following the signing of an IMF stand-by agreement in August 2000, Nigeria received a debt-restructuring deal from the Paris Club and a \$1 billion credit from the IMF, both contingent on economic reforms. The agreement was allowed to expire by the IMF in November 2001, however, and Nigeria appears unlikely to receive substantial multilateral assistance in 2002. Nonetheless, increases in foreign oil investment and oil production should push growth over 4% in 2002.

Transnational Issues

Disputes - international: Nigeria disputes several villages with Benin along the Okpara River, and only 35 km of their common boundary are demarcated; the Benin-Niger-Nigeria tripoint remains undemarcated; Lake Chad Basin Commission urges signatories Cameroon, Chad, Niger, and Nigeria to ratify delimitation treaty over lake region, the site of continuing armed clashes; oral arguments on the land and maritime boundary disputes between Cameroon and Nigeria were presented to the ICJ; disputes center around Bakasi Peninsula, where armed

clashes continue, Bouram Island on Lake Chad, and the maritime boundary and economic zone dispute in the Gulf of Guinea, which also involves Equatorial Guinea; Nigeria requests and Chad rejects redemarcation of boundary, which lacks clear demarcation in sections and has caused several cross-border incidents

Illicit drugs: a transit point for heroin and cocaine intended for European, East Asian, and North American markets; safehaven for Nigerian narcotraffickers operating worldwide

Niue

(self-governing in free association with New Zealand)

Introduction

Background: Niue's remoteness, as well as cultural and linguistic differences between its Polynesian inhabitants and those of the rest of the Cook Islands, have caused it to be separately administered. The population of the island continues to drop (from a peak of 5,200 in 1966 to about 2,100 in 2002) with substantial emigration to New Zealand, 2,400 km to the southwest.

Economy

Economy - overview: The economy suffers from the typical Pacific island problems of geographic isolation, few resources, and a small population. Government expenditures regularly exceed revenues, and the shortfall is made up by critically needed grants from New Zealand that are used to pay wages to public employees. Niue has cut government expenditures by reducing the public service by almost half. The agricultural sector consists mainly of subsistence gardening, although some cash crops are grown for export. Industry consists primarily of small factories to process passion fruit, lime oil, honey, and coconut cream. The sale of postage stamps to foreign collectors is an important source of revenue. The island in recent years has suffered a serious loss of population because of migration of Niueans to New Zealand. Efforts to increase GDP include the promotion of tourism and a financial services industry, although Premier LAKATANI announced in February 2002 that Niue will shut down the offshore banking industry. Economic aid from New Zealand in 2002 will be about \$2.6 million.

Norfolk Island (territory of Australia)

Introduction

Background: Two British attempts at establishing the island as a penal colony (1788-1814 and 1825-55) were ultimately abandoned. In 1856, the island was resettled by Pitcairn Islanders, descendants of the Bounty mutineers and their Tahitian companions.

Northern Mariana Islands

(commonwealth in political union with the US)

Introduction

Background: Under US administration as part of the UN Trust Territory of the Pacific, the people of the Northern Mariana Islands decided in the 1970s not to seek independence but instead to forge closer links with the US. Negotiations for territorial status began in 1972. A covenant to establish a commonwealth in political union with the US was approved in 1975. A new government and constitution went into effect in 1978.

Economy

Economy - overview: The economy benefits substantially from financial assistance from the US. The rate of funding has declined as locally generated government revenues have grown. The key tourist industry employs about 50% of the work force and accounts for roughly one-fourth of GDP. Japanese tourists predominate. Annual tourist entries have exceeded one-half million in recent years, but financial difficulties in Japan have caused a temporary slowdown. The agricultural sector is made up of cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. Garment production is by far the most important industry with employment of 17,500 mostly Chinese workers and sizable shipments to the US under duty and quota exemptions.

Norway

Introduction

Background: Despite its neutrality, Norway was not able to avoid occupation by Germany in World War II. In 1949, neutrality was abandoned and Norway became a member of NATO. Discovery of oil and gas in adjacent waters in the late 1960s boosted Norway's economic fortunes. The current focus is on containing spending on the extensive welfare system and planning for the time when petroleum reserves are depleted. In referenda held in 1972 and 1994, Norway rejected joining the EU.

Economy

Economy - overview: The Norwegian economy is a prosperous bastion of welfare capitalism, featuring a combination of free market activity and government intervention. The government controls key areas, such as the vital petroleum sector (through large-scale state enterprises). The country is richly endowed with natural resources - petroleum, hydropower, fish, forests, and minerals - and is highly dependent on its oil production and international oil prices; in 1999, oil and gas accounted for 35% of exports. Only Saudi Arabia and Russia export more oil than Norway. Oslo opted to stay out of the EU during a referendum in November 1994. Growth picked up in 2000 to 2.7%, compared with the meager 0.8% of 1999, but fell back to 1.3% in 2001. The government moved ahead with privatization in 2000, even proposing the sale of up to one-third of the 100% state-owned oil company Statoil. With arguably the highest quality of life worldwide, Norwegians still worry about that time in the next two decades when the oil and gas begin to run out. Accordingly, Norway has been saving its oil-boasted budget surpluses in a Government Petroleum Fund, which is invested abroad and now is valued at more than \$43 billion.

Oman

Introduction

Background: In 1970, QABOOS bin Said Al Said ousted his father and has ruled as sultan ever since. His extensive modernization program has opened the country to the outside world and has preserved a long-standing political and military relationship with the UK. Oman's moderate, independent foreign policy has sought to maintain good relations with all Middle Eastern countries.

Military expenditures - percent of GDP: 12.2% (FY01)

Transnational Issues

Disputes - international: Oman signed a boundary treaty with the UAE in 1999, but the completed boundary is not expected until the end of 2002; undefined segments of the Oman-UAE boundary remain with Ra's al-Khaymah and Ash Shariqah (Sharjah) emirates, including the Musandam Peninsula, where an administrative boundary substitutes for an international boundary

Pacific Ocean

Introduction

Background: The Pacific Ocean is the largest of the world's five oceans (followed by the Atlantic Ocean, Indian Ocean, Southern Ocean, and Arctic Ocean). Strategically important access waterways include the La Perouse, Tsugaru, Tsushima, Taiwan, Singapore, and Torres Straits. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Pacific Ocean south of 60 degrees south.

Geography

Location: body of water between the Southern Ocean, Asia, Australia, and the Western Hemisphere

Geographic coordinates: 0 00 N, 160 00 W

Map references: Political Map of the World

Area:

total: 155.557 million sq km

note: includes Bali Sea, Bering Sea, Bering Strait, Coral Sea, East China Sea, Flores Sea, Gulf of Alaska, Gulf of Tonkin, Java Sea, Philippine Sea, Savu Sea, Sea of Japan, Sea of Okhotsk, South China Sea, Tasman Sea, Timor Sea, and other tributary water bodies

Area - comparative: about 15 times the size of the US; covers about 28% of the global surface; larger than the total land area of the world

Coastline: 135,663 km

Climate: planetary air pressure systems and resultant wind patterns exhibit remarkable uniformity in the south and east; trade winds and westerly winds are well-developed patterns, modified by seasonal fluctuations; tropical cyclones (hurricanes) may form south of Mexico from June to October and affect Mexico and Central America; continental influences cause climatic uniformity to be much less pronounced in the eastern and western regions at the same latitude in the North Pacific Ocean; the western Pacific is monsoonal - a rainy season occurs during the

Pacific Ocean (continued)

summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian landmass back to the ocean; tropical cyclones (typhoons) may strike southeast and east Asia from May to December

Terrain: surface currents in the northern Pacific are dominated by a clockwise, warm-water gyre (broad circular system of currents) and in the southern Pacific by a counterclockwise, cool-water gyre; in the northern Pacific, sea ice forms in the Bering Sea and Sea of Okhotsk in winter; in the southern Pacific, sea ice from Antarctica reaches its northernmost extent in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the western Pacific is dissected by deep trenches, including the Mariana Trench, which is the world's deepest

Elevation extremes:

lowest point: Challenger Deep in the Mariana Trench -10,924 m

highest point: sea level 0 m

Natural resources: oil and gas fields, polymetallic nodules, sand and gravel aggregates, placer deposits, fish

Natural hazards: surrounded by a zone of violent volcanic and earthquake activity sometimes referred to as the "Pacific Ring of Fire"; subject to tropical cyclones (typhoons) in southeast and east Asia from May to December (most frequent from July to October); tropical cyclones (hurricanes) may form south of Mexico and strike Central America and Mexico from June to October (most common in August and September); cyclical El Niño/La Niña phenomenon occurs in the equatorial Pacific, influencing weather in the Western Hemisphere and the western Pacific; ships subject to superstructure icing in extreme north from October to May; persistent fog in the northern Pacific can be a maritime hazard from June to December

Environment - current issues: endangered marine species include the dugong, sea lion, sea otter, seals, turtles, and whales; oil pollution in Philippine Sea and South China Sea

Geography - note: the major chokepoints are the Bering Strait, Panama Canal, Luzon Strait, and the Singapore Strait; the Equator divides the Pacific Ocean into the North Pacific Ocean and the South Pacific Ocean; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean

Economy

Economy - overview: The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides low-cost sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1996, over 60% of the world's fish catch came from the Pacific Ocean. Exploitation of offshore oil and gas reserves is playing an ever-increasing role in the energy supplies of US, Australia, NZ, China,

and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has slowed but not stopped new drillings.

Transportation

Ports and harbors: Bangkok (Thailand), Hong Kong, Kao-hsiung (Taiwan), Los Angeles (US), Manila (Philippines), Pusan (South Korea), San Francisco (US), Seattle (US), Shanghai (China), Singapore, Sydney (Australia), Vladivostok (Russia), Wellington (NZ), Yokohama (Japan)

Transportation - note: Inside Passage offers protected waters from southeast Alaska to Puget Sound (Washington state)

Transnational issues

Disputes - international: some maritime disputes (see littoral states)

Pakistan

Introduction

Background: The separation in 1947 of British India into the Muslim state of Pakistan (with two sections West and East) and largely Hindu India was never satisfactorily resolved. A third war between these countries in 1971 resulted in East Pakistan seceding and becoming the separate nation of Bangladesh. A dispute over the state of Kashmir is ongoing. In response to Indian nuclear weapons testing, Pakistan conducted its own tests in 1998.

Geography

Location: Southern Asia, bordering the Arabian Sea, between India on the east and Iran and Afghanistan on the west and China in the north

Geographic coordinates: 30 00 N, 70 00 E

Map references: Asia

Area:

total: 803,940 sq km

land: 778,720 sq km

water: 25,220 sq km

Area - comparative: slightly less than twice the size of California

border countries: Afghanistan 2,430 km, China 523 km, India 2,912 km, Iran 909 km

Coastline: 1,046 km

Maritime claims:

contiguous zone: 24 NM

continental shelf: 200 NM or to the edge of the continental margin

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: mostly hot, dry desert; temperate in northwest; arctic in north

Terrain: flat Indus plain in east; mountains in north and northwest; Balochistan plateau in west

Elevation extremes:

lowest point: Indian Ocean 0 m

Pakistan (continued)

highest point: K2 (Mt. Godwin-Austen) 8,611 m

Natural resources: land, extensive natural gas reserves, limited petroleum, poor quality coal, iron ore, copper, salt, limestone

Land use:

arable land: 28%

permanent crops: 1%

other: 71% (1998 est.)

Irrigated land: 180,000 sq km (1998 est.)

Natural hazards: frequent earthquakes, occasionally severe especially in north and west; flooding along the Indus after heavy rains (July and August)

Environment - current issues: water pollution from raw sewage, industrial wastes, and agricultural runoff; limited natural fresh water resources; a majority of the population does not have access to potable water; deforestation; soil erosion; desertification

Environment - international agreements:

party to: Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Ozone Layer Protection, Ship Pollution, Wetlands

signed, but not ratified: Marine Life Conservation, Nuclear Test Ban

Geography - note: controls Khyber Pass and Bolan Pass, traditional invasion routes between Central Asia and the Indian Subcontinent

Government

Country name:

conventional long form: Islamic Republic of Pakistan

conventional short form: Pakistan

former: West Pakistan

Government type: federal republic

Capital: Islamabad

Administrative divisions: 4 provinces, 1 territory*, and 1 capital territory**; Balochistan, Federally Administered Tribal Areas*, Islamabad Capital Territory**, North-West Frontier Province, Punjab, Sindh

note: the Pakistani-administered portion of the disputed Jammu and Kashmir region includes Azad Kashmir and the Northern Areas

Independence: 14 August 1947 (from UK)

National holiday: Republic Day, 23 March (1956)

Constitution: 10 April 1973, suspended 5 July 1977, restored with amendments 30 December 1985; suspended 15 October 1999

Legal system: based on English common law with provisions to accommodate Pakistan's status as an Islamic state; accepts compulsory ICJ jurisdiction, with reservations

Suffrage: 21 years of age; universal; separate electorates and reserved parliamentary seats for non-Muslims

Executive branch:

note: following a military takeover on 12 October 1999, Chief of Army Staff and Chairman of the Joint Chiefs of Staff Committee, General Pervez MUSHARRAF, suspended Pakistan's constitution and assumed the additional title of Chief Executive; exercising the powers of the head of the government, he appointed an eight-member National Security Council to function as Pakistan's supreme governing body; on 12 May 2000, Pakistan's Supreme Court unanimously validated the October 1999 coup and granted MUSHARRAF executive and legislative authority for three years from the coup date; on 20 June 2001, MUSHARRAF named himself and was sworn in as president, replacing Mohammad Rafiq

TARAR; in a referendum held on 30 April 2002, MUSHARRAF won an overwhelming majority of votes, extending his rule for five more years

chief of state: President Pervez MUSHARRAF (since 20 June 2001)

head of government: Chief Executive Pervez MUSHARRAF (since 12 May 2000)

cabinet: Cabinet appointed by the chief executive

elections: prior to the military takeover, Pakistan had an elected president and prime minister; the president was elected by Parliament for a five-year term; election last held 31 December 1997 (next election to be held NA); following legislative elections, the leader of the majority party or majority coalition was usually elected prime minister by the National Assembly; election last held 3 February 1997 (next to be held NA)

election results: results are for the last elections for prime minister and president prior to the military takeover - Mohammad Nawaz SHARIF elected prime minister; percent of National Assembly vote - NA%; Rafiq TARAR elected president; percent of Parliament vote - NA%

Legislative branch: note - Gen. Pervez

MUSHARRAF dissolved Parliament following the military takeover of 12 October 1999; bicameral Parliament or Majlis-e-Shoora consists of the Senate (87 seats; members indirectly elected by provincial assemblies to serve six-year terms; one-third of the members up for election every two years) and the National Assembly (217 seats - 10 represent non-Muslims; members elected by popular vote to serve five-year terms)

elections: Senate - last held 12 March 1997 (next to be held by October 2002); National Assembly - last held 3 February 1997 (next to be held by October 2002)

Economy

Economy - overview: Pakistan, an impoverished and underdeveloped country, suffers from internal political disputes, lack of foreign investment, and a costly confrontation with neighboring India. Pakistan's economic prospects, marred by poor human development indicators, low levels of foreign investment, and reliance on international creditors for hard currency inflows, were nonetheless on an upswing through most of 2001. The MUSHARRAF government made significant inroads in macroeconomic reform - it completed an IMF short-term loan program for the first time and improved its standing with international creditors by increasing revenue collection and restraining the fiscal deficit in the 2001/02 budget. While Pakistan has capitalized on its international standing after the 11 September terrorist attacks on the US by garnering substantial assistance from abroad - including \$1.3 billion in IMF Poverty Reduction and Growth Facility aid and \$12.5 billion in Paris Club debt rescheduling - long-term prospects remain uncertain. GDP growth will continue to hinge on crop performance; dependence on foreign oil leaves the import bill vulnerable to fluctuating oil prices; and foreign and domestic investors remain wary of committing to projects in Pakistan. Pakistani trade levels - already in decline due to the global economic downturn - worsened in the aftermath of the September 11 attacks.

Transnational Issues

Disputes - international: armed stand-off with India over the status and sovereignty of Kashmir continues; dispute with India over the terminus of Rann of Kutch prevents extension of a maritime boundary; water-sharing problems with India persist over the Indus River (Wular Barrage); close ties with Pashtuns in Afghanistan make long border difficult to control

Illicit drugs: Poppy cultivation practically eliminated with only 213 hectares grown; potential heroin production 5 tons; key transit area for Southwest Asian heroin moving to Western markets; narcotics still move from Afghanistan, transiting Balochistan Province or Karachi for onward shipment

Palau

Introduction

Background: After three decades as part of the UN Trust Territory of the Pacific under US administration, this westernmost cluster of the Caroline Islands opted for independence in 1978 rather than join the Federated States of Micronesia. A Compact of Free Association with the US was approved in 1986, but not ratified until 1993. It entered into force the following year when the islands gained independence.

Economy

Economy - overview: The economy consists primarily of tourism, subsistence agriculture and fishing. The government is the major employer of the work force, relying heavily on financial assistance from the US. Business and tourist arrivals numbered 50,000 in FY00/01. The population enjoys a per capita income twice that of the Philippines and much of Micronesia. Long-run prospects for the key tourist sector have been greatly bolstered by the expansion of air travel in the Pacific, the rising prosperity of leading East Asian countries, and the willingness of foreigners to finance infrastructure development.

Palmyra Atoll (territory of the US)

Introduction

Background: The Kingdom of Hawaii claimed the atoll in 1862, and the US included it among the Hawaiian Islands when it annexed the archipelago in 1898. The Hawaii Statehood Act of 1959 did not include Palmyra Atoll, which is now privately owned by the Nature Conservancy. This organization is managing the atoll as a nature preserve. The lagoons and surrounding waters within the 12 nautical mile US territorial seas were transferred to the US Fish and Wildlife Service and were designated a National Wildlife Refuge in January 2001.

Panama

Introduction

Background: With US backing, Panama seceded from Colombia in 1903 and promptly signed a treaty with the US allowing for the construction of a canal and US sovereignty over a strip of land on either side of the structure (the Panama Canal Zone). The Panama Canal was built by the US Army Corps of Engineers between 1904 and 1914. On 7 September 1977, an agreement was signed for the complete transfer of the Canal from the US to Panama by the end of 1999. Certain portions of the Zone and increasing responsibility over the Canal were turned over in the intervening years. With US help, dictator Manuel NORIEGA was deposed in 1989. The entire Panama Canal, the area supporting the Canal, and remaining US military bases were turned over to Panama by or on 31 December 1999.

Geography

Economy

Economy - overview: Panama's economy is based primarily on a well-developed services sector that accounts for three-fourths of GDP. Services include the Panama Canal, banking, the Colon Free Zone, insurance, container ports, flagship registry, and tourism. A slump in Colon Free Zone and agricultural exports, the global slowdown, and the withdrawal of US military forces held back economic growth in 2000-01. The government plans public works programs, tax reforms, and new regional trade agreements in order to stimulate growth.

Papua New Guinea

Introduction

Background: The eastern half of the island of New Guinea - second largest in the world - was divided between Germany (north) and the UK (south) in 1885. The latter area was transferred to Australia in 1902, which occupied the northern portion during World War I and continued to administer the combined areas until independence in 1975. A nine-year secessionist revolt on the island of Bougainville ended in 1997, after claiming some 20,000 lives.

Economy

Economy - overview: Papua New Guinea is richly endowed with natural resources, but exploitation has been hampered by rugged terrain and the high cost of developing infrastructure. Agriculture provides a subsistence livelihood for 85% of the population. Mineral deposits, including oil, copper, and gold, account for 72% of export earnings. The economy has declined over the past two years and will probably continue to falter in 2002. Prime Minister Mekere MORAUTA has tried to restore integrity to state institutions, stabilize the kina, restore stability to the national budget, privatize public enterprises where appropriate, and ensure ongoing peace on Bougainville. The government has had considerable success in attracting international support, specifically gaining the support of the IMF and the World Bank in securing development assistance loans. Significant challenges remain for MORAUTA, however, including gaining further investor confidence, specifically for the proposed Papua New Guinea-Australia oil pipeline, continuing efforts to privatize government assets, and maintaining the support of members of Parliament.

Paracel Islands

Introduction

Background: This archipelago is surrounded by productive fishing grounds and by potential oil and gas reserves. In 1932, French Indochina annexed the islands and set up a weather station on Pattle Island; maintenance was continued by its successor, Vietnam. China has occupied the Paracel Islands since 1974, when its troops seized a South Vietnamese garrison occupying the western islands. The islands are claimed by Vietnam and Taiwan.

Paraguay

Introduction

Background: In the disastrous War of the Triple Alliance (1865-70), Paraguay lost two-thirds of all adult males and much of its territory. It stagnated economically for the next half century. In the Chaco War of 1932-35, large, economically important areas were won from Bolivia. The 35-year military dictatorship of Alfredo STROESSNER was overthrown in 1989, and, despite a marked increase in political infighting in recent years, relatively free and regular presidential elections have been held since then.

Economy

Economy - overview: Paraguay has a market economy marked by a large informal sector. The informal sector features both reexport of imported consumer goods to neighboring countries as well as the activities of thousands of microenterprises and urban street vendors. Because of the importance of the informal sector, accurate economic measures are difficult to obtain. A large percentage of the population derives their living from agricultural activity, often on a subsistence basis. The formal economy grew by an average of about 3% annually in 1995-97, but GDP declined slightly in 1998, 1999, and 2000. On a per capita basis, real income has stagnated at 1980 levels. Most observers attribute Paraguay's poor economic performance to political uncertainty, corruption, lack of progress on structural reform, substantial internal and external debt, and deficient infrastructure.

Peru

Introduction

Background: Ancient Peru was the seat of several prominent Andean civilizations, most notably that of the Incas whose empire was captured by the Spanish conquistadores in 1533. Peruvian independence was declared in 1821, and remaining Spanish forces defeated in 1824. After a dozen years of military rule, Peru returned to democratic leadership in 1980, but experienced economic problems and the growth of a violent insurgency. President Alberto FUJIMORI's election in 1990 ushered in a decade that saw a dramatic turnaround in the economy and significant progress in curtailing guerrilla activity. Nevertheless, the president's increasing reliance on authoritarian measures and an economic slump in the late 1990s generated mounting dissatisfaction with his regime. FUJIMORI won reelection to a third term in the spring of 2000, but international pressure and corruption scandals led to his ouster by Congress in November of that year. A caretaker government oversaw new elections in the spring of 2001, which ushered in Alejandro TOLEDO as the new head of government.

Economy

Economy - overview: Thanks to strong foreign investment and the cooperation between the government and the IMF and World Bank, growth was strong in 1994-97 and inflation was brought under control. In 1998, El Nino's impact on agriculture, the financial crisis in Asia, and instability in Brazilian markets undercut growth. And 1999 was another lean year for Peru, with the aftermath of El Nino and the Asian financial crisis working its way through the economy. Political instability resulting from the presidential election and FUJIMORI's subsequent departure from office limited growth in 2000. The downturn in the global economy further depressed growth in 2001. President TOLEDO, who assumed the presidency in July 2001, is working to reinvigorate the economy and reduce unemployment. Economic growth in 2002 is projected to be 3 to 3.5%.

Illicit drugs: until 1996 the world's largest coca leaf producer; emerging opium producer; Peru reduced the area of coca under cultivation by 64% to 34,000 hectares between 1996 and the end of 2001; much of the cocaine base is shipped to neighboring Colombia for processing into cocaine, while finished cocaine is shipped out from Pacific ports to the international drug market; increasing amounts of base and finished cocaine, however, are being moved to Brazil and Bolivia for use in the Southern Cone or transhipped to Europe and Africa

Philippines

Introduction

Background: The Philippines were ceded by Spain to the US in 1898 following the Spanish-American War. They attained their independence in 1946 after Japanese occupation in World War II. The 21-year rule of Ferdinand MARCOS ended in 1986 when a widespread popular rebellion forced him into exile. In 1992, the US closed its last military bases on the islands. The Philippines has had two electoral presidential transitions since Marcos' removal by "people power." In January 2001, the Supreme Court declared Joseph ESTRADA unable to rule in view of mass resignations from his government and administered the oath of office to Vice President Gloria MACAPAGAL-ARROYO as his constitutional successor. The government continues to struggle with ongoing Muslim insurgencies in the south.

Economy

Economy - overview: In 1998 the Philippine economy - a mixture of agriculture, light industry, and supporting services - deteriorated as a result of spillover from the Asian financial crisis and poor weather conditions. Growth fell to 0.6% in 1998 from 5% in 1997, but recovered to about 3% in 1999 and 4% in 2000. The government has promised to continue its economic reforms to help the Philippines match the pace of development in the newly industrialized countries of East Asia. The strategy includes improving infrastructure, overhauling the tax system to bolster government revenues, furthering deregulation and privatization of the economy, and increasing trade integration with the region. Prospects for 2002 depend heavily on the economic performance of two major trading partners, the US and Japan.

Pitcairn Islands

(overseas territory
of the UK)

Introduction

Background: Pitcairn Island was discovered in 1767 by the British and settled in 1790 by the Bounty mutineers and their Tahitian companions. Pitcairn was the first Pacific island to become a British colony (in 1838) and today remains the last vestige of that empire in the South Pacific. Outmigration, primarily to New Zealand, has thinned the population from a peak of 233 in 1937 to less than 50 today.

Economy

Economy - overview: The inhabitants of this tiny economy exist on fishing, subsistence farming, handicrafts, and postage stamps. The fertile soil of the valleys produces a wide variety of fruits and vegetables, including citrus, sugarcane, watermelons, bananas, yams, and beans. Bartering is an important part of the economy. The major sources of revenue are the sale of postage stamps to collectors and the sale of handicrafts to passing ships.

Poland

Introduction

Background: Poland is an ancient nation that was conceived around the middle of the 10th century. It's golden age occurred in the 16th century. During the following century, the strengthening of the gentry and internal disorders weakened the nation, until an agreement in 1772 between Russia, Prussia, and Austria partitioned Poland. Poland regained its independence in 1918 only to be overrun by Germany and the Soviet Union in World War II. It became a Soviet satellite country following the war, but one that was comparatively tolerant and progressive. Labor turmoil in 1980 led to the formation of the independent trade union "Solidarity" that over time became a political force and by 1990 had swept parliamentary elections and the presidency. A "shock therapy" program during the early 1990s enabled the country to transform its economy into one of the most robust in Central Europe, boosting hopes for acceptance to the EU. Poland joined the NATO alliance in 1999.

Economy

Economy - overview: Poland has steadfastly pursued a policy of liberalizing the economy and today stands out as one of the most successful and open transition economies. GDP growth had been strong and steady in 1993-2000 but fell back in 2001 with slowdowns in domestic investment and consumption and the weakening in the global economy. The privatization of small and medium state-owned companies and a liberal law on establishing new firms have allowed for the rapid development of a vibrant private sector. In contrast, Poland's large agricultural sector remains handicapped by structural problems, surplus labor, inefficient small farms, and lack of investment. Restructuring and privatization of "sensitive sectors" (e.g., coal, steel, railroads, and energy) has begun. Structural reforms in health care, education, the pension system, and state administration have resulted in larger than expected fiscal pressures. Further progress in public finance depends mainly on privatization of Poland's remaining

state sector. The government's determination to enter the EU as soon as possible affects most aspects of its economic policies. Improving Poland's outsized current account deficit and reining in inflation are priorities. Warsaw leads the region in foreign investment and needs a continued large inflow.

Introduction

Background: Following its heyday as a world power during the 15th and 16th centuries, Portugal lost much of its wealth and status with the destruction of Lisbon in a 1755 earthquake, occupation during the Napoleonic Wars, and the independence in 1822 of Brazil as a colony. A 1910 revolution deposed the monarchy; for most of the next six decades repressive governments ran the country. In 1974, a left-wing military coup installed broad democratic reforms. The following year Portugal granted independence to all of its African colonies. Portugal entered the EC (now the EU) in 1985.

Economy

Economy - overview: Portugal has become a diversified and increasingly service-based economy since joining the European Community in 1986. Over the past decade, successive governments have privatized many state-controlled firms and liberalized key areas of the economy, including the financial and telecommunications sectors. The country qualified for the European Monetary Union (EMU) in 1998 and began circulating its new currency, the euro, on 1 January 2002 along with 11 other EU member economies. Economic growth has been above the EU average for much of the past decade, but GDP per capita stands at just 75% of that of the leading EU economies. The government has failed to reign in a widening deficit and to advance structural reforms needed to boost Portugal's economic competitiveness. A poor educational system, in particular, has been an obstacle to greater productivity and growth. Portugal has been increasingly overshadowed by lower-cost producers in Central Europe and Asia as a target for foreign direct investment.

Puerto Rico

(commonwealth associated with the US)

Introduction

Background: Populated for centuries by aboriginal peoples, the island was claimed by the Spanish Crown in 1493 following Columbus' second voyage to the Americas. In 1898, after 400 years of colonial rule that saw the indigenous population nearly exterminated and African slave labor introduced, Puerto Rico was ceded to the US as a result of the Spanish-American War. Puerto Ricans were granted US citizenship in 1917 and popularly elected governors have served since 1948. In 1952, a constitution was enacted providing for internal self-government. In plebiscites held in 1967, 1993, and 1998 voters chose to retain commonwealth status.

Geography

Location: Caribbean, island between the Caribbean Sea and the North Atlantic Ocean, east of the Dominican Republic

Geographic coordinates: 18 15 N, 66 30 W

Economy

Economy - overview: Puerto Rico has one of the most dynamic economies in the Caribbean region. A diverse industrial sector has surpassed agriculture as the primary locus of economic activity and income. Encouraged by duty-free access to the US and by tax incentives, US firms have invested heavily in Puerto Rico since the 1950s. US minimum wage laws apply. Sugar production has lost out to dairy production and other livestock products as the main source of income in the agricultural sector. Tourism has traditionally been an important source of income, with estimated arrivals of nearly 5 million tourists in 1999. Growth fell off in 2001, largely due to the slowdown in the US economy.

Qatar

Introduction

Background: Ruled by the Al Thani family since the mid-1800s, Qatar transformed itself from a poor British protectorate noted mainly for pearling into an independent state with significant oil and natural gas revenues. During the late 1980s and early 1990s, the Qatari economy was crippled by a continuous siphoning off of petroleum revenues by the amir who had ruled the country since 1972. He was overthrown by his son, the current Amir HAMAD bin Khalifa Al Thani, in a bloodless coup in 1995. In 2001, Qatar resolved its longstanding border disputes with both Bahrain and Saudi Arabia. Oil and natural gas revenues enable Qatar to have a per capita income not far below the leading industrial countries of Western Europe.

Economy

Economy - overview: Oil accounts for more than 30% of GDP, roughly 80% of export earnings, and 58% of government revenues. Proved oil reserves of 3.7 billion barrels should ensure continued output at current levels for 23 years. Oil has given Qatar a per capita GDP comparable to that of the leading West European industrial countries. Qatar's proved reserves of natural gas exceed 7 trillion cubic meters, more than 5% of the world total, third largest in the world. Production and export of natural gas are becoming increasingly important. Long-term goals feature the development of offshore natural gas reserves. In 2000, Qatar posted its highest ever trade surplus of \$7 billion, due mainly to high oil prices and increased natural gas exports, and managed to maintain the surplus in 2001.

Reunion (overseas department of France)

Introduction

Background: The Portuguese discovered the uninhabited island in 1513. From the 17th to the 19th centuries, French immigration supplemented by influxes of Africans, Chinese, Malays, and Malabar Indians gave the island its ethnic mix. The opening of the Suez Canal in 1869 cost the island its importance as a stopover on the East Indies trade route.

Economy

Economy - overview: The economy has traditionally been based on agriculture. Sugarcane has been the primary crop for more than a century, and in some years it accounts for 85% of exports. The government has been pushing the development of a tourist industry to relieve high unemployment, which amounts to more than 40% of the labor force. The gap in Reunion between the well-off and the poor is extraordinary and accounts for the persistent social tensions. The white and Indian communities are substantially better off than other segments of the population, often approaching European standards, whereas minority groups suffer the poverty and unemployment typical of the poorer nations of the African continent. The outbreak of severe rioting in February 1991 illustrates the seriousness of socioeconomic tensions. The economic well-being of Reunion depends heavily on continued financial assistance from France.

Romania

Introduction

Background: Soviet occupation following World War II led to the formation of a Communist "peoples republic" in 1947 and the abdication of the king. The decades-long rule of dictator Nicolae CEAUSESCU and his Securitate police state became increasingly oppressive and draconian through the 1980s. CEAUSESCU was overthrown and executed in late 1989. Former communists dominated the government until 1996 when they were swept from power by a fractious coalition of center-right parties. Today the Communist Party, renamed the Party of Social Democracy, rules in cooperation with the ethnic Hungarian minority rights party. Much economic restructuring remains to be carried out before Romania can achieve its hope of joining the EU.

Economy

Economy - overview: Romania, one of the poorest countries of Central and Eastern Europe, began the transition from Communism in 1989 with a largely obsolete industrial base and a pattern of output unsuited to the country's needs. Over the past decade economic restructuring has lagged behind most other countries in the region. Consequently, living standards have continued to fall - real wages are down perhaps 40%. The country emerged in 2000 from a punishing three-year recession thanks to strong demand in EU export markets, and despite the global slowdown in 2001, strong domestic activity in construction, agriculture, and consumption led to 4.8% growth. A standby agreement with the IMF - covering the period October 2001 to March 2003 - provides a key opportunity for vigorous privatization, regulatory reform, deficit reduction, and the curbing of inflation. The government in the past has not been able to fully implement IMF agreements; its degree of success in this case will affect prospects for joining the EU.

Russia

Introduction

Background: The defeat of the Russian Empire in World War I led to the seizure of power by the Communists and the formation of the USSR. The brutal rule of Josef STALIN (1924-53) strengthened Russian dominance of the Soviet Union at a cost of tens of millions of lives. The Soviet economy and society stagnated in the following decades until General Secretary Mikhail GORBACHEV (1985-91) introduced glasnost (openness) and perestroika (restructuring) in an attempt to modernize Communism, but his initiatives inadvertently released forces that by December 1991 splintered the USSR into 15 independent republics. Since then, Russia has struggled in its efforts to build a democratic political system and market economy to replace the strict social, political, and economic controls of the Communist period. A determined guerrilla conflict still plagues Russia in Chechnya.

Location: Northern Asia (that part west of the Urals is sometimes included with Europe), bordering the Arctic Ocean, between Europe and the North Pacific Ocean

Geographic coordinates: 60 00 N, 100 00 E

Map references: Asia

Area:

total: 17,075,200 sq km

land: 16,995,800 sq km

water: 79,400 sq km

Area - comparative: slightly less than 1.8 times the size of the US

Land boundaries:

total: 19,990 km

border countries: Azerbaijan 284 km, Belarus 959 km, China (southeast) 3,605 km, China (south) 40 km, Estonia 294 km, Finland 1,313 km, Georgia 723 km, Kazakhstan 6,846 km, North Korea 19 km,

Latvia 217 km, Lithuania (Kaliningrad Oblast) 227 km,

Mongolia 3,485 km, Norway 196 km, Poland

(Kaliningrad Oblast) 206 km, Ukraine 1,576 km

Coastline: 37,653 km

Maritime claims:

continental shelf: 200-m depth or to the depth of exploitation

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: ranges from steppes in the south through humid continental in much of European Russia; subarctic in Siberia to tundra climate in the polar north; winters vary from cool along Black Sea coast to frigid in Siberia; summers vary from warm in the steppes to cool along Arctic coast

Terrain: broad plain with low hills west of Urals; vast coniferous forest and tundra in Siberia; uplands and mountains along southern border regions

Elevation extremes:

lowest point: Caspian Sea -28 m

highest point: Gora Elbrus 5,633 m

Natural resources: wide natural resource base including major deposits of oil, natural gas, coal, and many strategic minerals, timber

note: formidable obstacles of climate, terrain, and distance hinder exploitation of natural resources

Land use:

arable land: 8%

permanent crops: 0%

other: 92% (1998 est.)

Irrigated land: 46,630 sq km (1998 est.)

Natural hazards: permafrost over much of Siberia is a major impediment to development; volcanic activity in the Kuril Islands; volcanoes and earthquakes on the Kamchatka Peninsula

Environment - current issues: air pollution from heavy industry, emissions of coal-fired electric plants, and transportation in major cities; industrial, municipal, and agricultural pollution of inland waterways and seacoasts; deforestation; soil erosion; soil contamination from improper application of

agricultural chemicals; scattered areas of sometimes intense radioactive contamination; groundwater contamination from toxic waste

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Air Pollution-Sulphur 85, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Wetlands, Whaling

signed, but not ratified: Air Pollution-Sulphur 94, Climate Change-Kyoto Protocol

Geography - note: largest country in the world in terms of area but unfavorably located in relation to major sea lanes of the world; despite its size, much of the country lacks proper soils and climates (either too cold or too dry) for agriculture; Mount Elbrus is Europe's tallest peak

Economy

Economy - overview: A decade after the implosion of the Soviet Union in December 1991, Russia is still struggling to establish a modern market economy and achieve strong economic growth. In contrast to its trading partners in Central Europe - which were able to overcome the initial production declines that accompanied the launch of market reforms within three to five years - Russia saw its economy contract for five years, as the executive and legislature dithered over the implementation of many of the basic foundations of a market economy. Russia achieved a slight recovery in 1997, but the government's stubborn budget deficits and the country's poor business climate made it vulnerable when the global financial crisis swept through in 1998. The crisis culminated in the August depreciation of the ruble, a debt default by the government, and a sharp deterioration in living standards for most of the population. The economy subsequently has rebounded, growing by an average of more than 6% annually in 1999-2001 on the back of higher oil prices and a weak ruble. This recovery, along with a renewed government effort in 2000 and 2001 to advance lagging structural reforms, have raised business and investor confidence over Russia's prospects in its second decade of transition. Yet serious problems persist. Russia remains heavily dependent on exports of commodities, particularly oil, natural gas, metals, and timber, which account for over 80% of exports, leaving the country vulnerable to swings in world prices. Russia's industrial base is increasingly dilapidated and must be replaced or modernized if the country is to achieve sustainable economic growth. Other problems include widespread corruption, lack of a strong legal system, capital flight, and brain drain.

Communications

Telephones - main lines in use: 30 million (1998)

Telephones - mobile cellular: 2.5 million (October 2000)

Telephone system:

general assessment: the telephone system has undergone significant changes in the 1990s; there are more than 1,000 companies licensed to offer communication services; access to digital lines has improved, particularly in urban centers; Internet and e-mail services are improving; Russia has made progress toward building the telecommunications infrastructure necessary for a market economy; however, a large demand for main line service remains unsatisfied

domestic: cross-country digital trunk lines run from Saint Petersburg to Khabarovsk, and from Moscow to Novorossiysk; the telephone systems in 60 regional capitals have modern digital infrastructures; cellular services, both analog and digital, are available in many areas; in rural areas, the telephone services are still outdated, inadequate, and low density
international: Russia is connected internationally by three undersea fiber-optic cables; digital switches in several cities provide more than 50,000 lines for international calls; satellite earth stations provide access to Intelsat, Intersputnik, Eutelsat, Inmarsat, and Orbita systems

Radio broadcast stations: AM 420, FM 447, shortwave 56 (1998)

Transnational Issues

Disputes - international: 2001 Treaty of Good Neighborliness, Friendship, and Cooperation commits Russia and China to seek peaceable unanimity over disputed alluvial islands at the confluence of the Amur and Ussuri rivers and a small island on the Argun; Russia hastens to delimit and demarcate boundary with Kazakhstan to limit illegal border activities; in 2002, Russia is the first state to submit data to the UN Commission on the Limits of the Continental Shelf to extend its continental shelf by claiming two undersea ridges in the Arctic; Russia signed bilateral agreements with Azerbaijan and Kazakhstan delimiting the Caspian seabed, but littoral states are far from multilateral agreement on dividing the waters and seabed regimes - Iran insists on division of Caspian Sea into five equal sectors while Azerbaijan, Kazakhstan, Russia, and Turkmenistan have generally agreed upon equidistant seabed boundaries; despite recent discussions, Russia and Norway dispute their maritime limits in the Barents Sea and Russia's fishing rights beyond Svalbard's territorial limits within the Svalbard Treaty zone; Russia continues to reject signing and ratifying the joint December 1996 technical border agreement with Estonia; the Russian Duma refuses to ratify boundary treaties signed with Latvia and Lithuania; Russia and Ukraine have successfully delimited land boundary in 2001, but disagree on delimitation of maritime boundary in the Sea of Azov and Black Sea; boundary with Georgia has been largely delimited, but not demarcated; several small, strategic segments remain in dispute; islands of Etorofu, Kunashiri, and Shikotan, and the Habomai group occupied by the Soviet Union in 1945, now administered by Russia, claimed by Japan

Illicit drugs: limited cultivation of illicit cannabis and opium poppy and producer of amphetamine, mostly for domestic consumption; government has active eradication program; increasingly used as transshipment point for Southwest and Southeast Asian opiates and cannabis and Latin American cocaine to Western Europe, possibly to the US, and growing domestic market; major source of heroin precursor chemicals; corruption and organized crime are major concerns; heroin an increasing threat in domestic drug market

Rwanda

Introduction

Background: In 1959, three years before independence from Belgium, the majority ethnic group, the Hutus, overthrew the ruling Tutsi king. Over the next several years thousands of Tutsis were killed, and some 150,000 driven into exile in neighboring countries. The children of these exiles later formed a rebel group, the Rwandan Patriotic Front and began a civil war in 1990. The war, along with several political and economic upheavals, exacerbated ethnic tensions culminating in April 1994 in the genocide of roughly 800,000 Tutsis and moderate Hutus. The Tutsi rebels defeated the Hutu regime and ended the killing in July 1994, but approximately 2 million Hutu refugees - many fearing Tutsi retribution - fled to neighboring Burundi, Tanzania, Uganda, and Zaire. Since then most of the refugees have returned to Rwanda. Despite substantial international assistance and political reforms - including Rwanda's first local elections in March 1999 - the country continues to struggle to boost investment and agricultural output and to foster reconciliation. A series of massive population displacements, a nagging Hutu extremist insurgency, and Rwandan involvement in two wars over the past four years in the neighboring DROC continue to hinder Rwanda's efforts.

Economy

Economy - overview: Rwanda is a rural country with about 90% of the population engaged in (mainly subsistence) agriculture. It is the most densely populated country in Africa; landlocked with few natural resources and minimal industry. Primary exports are coffee and tea. The 1994 genocide decimated Rwanda's fragile economic base, severely impoverished the population, particularly women, and eroded the country's ability to attract private and external investment. However, Rwanda has made significant progress in stabilizing and rehabilitating its economy. GDP has rebounded, and inflation has been curbed. Rwanda received approval for debt relief from the IMF in late 2000 and continued to make progress on inflation, privatization, and GDP growth in 2001. However, export earnings were hindered by low global coffee prices, depriving the country of much needed hard currency. President KAGAME is encouraging investors to take advantage of export opportunities in Rwanda based on its membership in the COMESA free trade area and its access to the US and the EU markets through preferential trade agreements.

Saint Helena

(overseas territory of the UK)

Introduction

Background: Uninhabited when first discovered by the Portuguese in 1502, Saint Helena was garrisoned by the British during the 17th century. It acquired fame as the place of Napoleon BONAPARTE's exile, from 1815 until his death in 1821, but its importance as a port of call declined after the opening of the Suez Canal in 1869. Ascension Island is the site of a US Air Force auxiliary airfield; Gough Island has a meteorological station.

Economy

Economy - overview: The economy depends largely on financial assistance from the UK, which amounted to about \$5 million in 1997 or almost one-half of annual budgetary revenues. The local population earns income from fishing, the raising of livestock, and sales of handicrafts. Because there are few jobs, 25% of the work force has left to seek employment on Ascension Island, on the Falklands, and in the UK.

Saint Kitts and Nevis

Introduction

Background: First settled by the British in 1623, the islands became an associated state with full internal autonomy in 1967. The island of Anguilla rebelled and was allowed to secede in 1971. Saint Kitts and Nevis achieved independence in 1983. In 1998, a vote in Nevis on a referendum to separate from Saint Kitts fell short of the two-thirds majority needed.

Economy

Economy - overview: Sugar was the traditional mainstay of the St. Kitts economy until the 1970s. Although the crop still dominates the agricultural sector, activities such as tourism, export-oriented manufacturing, and offshore banking have assumed larger roles in the economy. As tourism revenues are now the chief source of the islands' foreign exchange, a decline in stopover tourist arrivals following the September 11 terrorist attacks has eroded government finances. The government revised estimates of 2001 growth down to 1% and faces dim recovery prospects in 2002, given the depressed state of the tourism industry, low sugar prices, and a growing budget deficit.

Economy

Economy - overview: The recent changes in the EU import preference regime and the increased competition from Latin American bananas have made economic diversification increasingly important in Saint Lucia. The island nation has been able to attract foreign business and investment, especially in its offshore banking and tourism industries. The manufacturing sector is the most diverse in the Eastern Caribbean area, and the government is trying to revitalize the banana industry. Despite negative growth in 2001, economic fundamentals remain solid, and GDP growth should recover in 2002.

a red background with two stylized yellow lions outlined in black, one on top of the other; the flag of France is used for official occasions

Economy

Economy - overview: The inhabitants have traditionally earned their livelihood by fishing and by servicing fishing fleets operating off the coast of Newfoundland. The economy has been declining, however, because of disputes with Canada over fishing quotas and a steady decline in the number of ships stopping at Saint Pierre. In 1992, an arbitration panel awarded the islands an exclusive economic zone of 12,348 sq km to settle a longstanding territorial dispute with Canada, although it represents only 25% of what France had sought. The islands are heavily subsidized by France to the great betterment of living standards. The government hopes an expansion of tourism will boost economic prospects. Recent test drilling for oil may pave the way for development of the energy sector.

Economy

Economy - overview: Bananas and other agricultural products remain the staple of this lower-middle income country's economy. Although tourism and other services have been growing moderately in recent years, the government has been ineffective at introducing new industries.

Unemployment remains high, and economic growth hinges upon seasonal variations in the agricultural and tourism sectors. Tropical storms wiped out substantial portions of crops in 1994 and 1995, and tourism in the Eastern Caribbean has suffered low arrivals following September 11. St. Vincent is home to a small offshore banking sector, but its restrictive secrecy laws have come under international review. As of June 2001, it remained on the Financial Action Task Force's list of noncooperative jurisdictions.

Samoa

Introduction

Background: New Zealand occupied the German protectorate of Western Samoa at the outbreak of World War I in 1914. It continued to administer the islands as a mandate and then as a trust territory until 1962, when the islands became the first Polynesian nation to reestablish independence in the 20th century. The country dropped the "Western" from its name in 1997.

Economy

Economy - overview: The economy of Samoa has traditionally been dependent on development aid, family remittances from overseas, and agricultural exports. The country is vulnerable to devastating storms. Agriculture employs two-thirds of the labor force, and furnishes 90% of exports, featuring coconut cream, coconut oil, and copra. The manufacturing sector mainly processes agricultural products. The decline of fish stocks in the area is a continuing problem. Tourism is an expanding sector, accounting for 16% of GDP; about 85,000 tourists visited the islands in 2000. The Samoan Government has called for deregulation of the financial sector, encouragement of investment, and continued fiscal discipline. Observers point to the flexibility of the labor

market as a basic strength for future economic

advances. Foreign reserves are in a relatively healthy state, the external debt is stable, and inflation is low.

San Marino

Introduction

Background: The third smallest state in Europe (after the Holy See and Monaco) also claims to be the world's oldest republic. According to tradition, it was founded by a Christian stonemason named Marinus in 301 A.D. San Marino's foreign policy is aligned with that of Italy. Social and political trends in the republic also track closely with those of its larger neighbor.

Sao Tome and Principe

Introduction

Background: Discovered and claimed by Portugal in the late 15th century, the islands' sugar-based economy gave way to coffee and cocoa in the 19th century - all grown with plantation slave labor, a form of which lingered into the 20th century. Although independence was achieved in 1975, democratic reforms were not instituted until the late 1980s. The first free elections were held in 1991.

Economy

Economy - overview: This small poor island economy has become increasingly dependent on cocoa since independence 26 years ago. However, cocoa production has substantially declined because of drought and mismanagement. The resulting shortage of cocoa for export has created a persistent balance-of-payments problem. Sao Tome has to import all fuels, most manufactured goods, consumer goods, and a substantial amount of food. Over the years, it has been unable to service its external debt and has had to depend on concessional aid and debt rescheduling. Sao Tome benefited from \$200 million in debt relief in December 2000 under the Highly Indebted Poor Countries (HIPC) program. Sao Tome's success in implementing structural reforms has been rewarded by international donors, who have pledged increased assistance in 2001. Considerable potential exists for development of a tourist industry, and the government has taken steps to expand facilities in recent years. The government also has attempted to reduce price controls and subsidies. Sao Tome is also optimistic that substantial petroleum discoveries are forthcoming in its territorial waters in the oil-rich waters of the Gulf of Guinea. Corruption scandals continue to weaken the economy.

Saudi Arabia

Introduction

Background: In 1902 Abd al-Aziz Ibn SAUD captured Riyadh and set out on a 30-year campaign to unify the Arabian Peninsula. In the 1930s, the discovery of oil transformed the country. Following Iraq's invasion of Kuwait in 1990, Saudi Arabia accepted the Kuwaiti royal family and 400,000 refugees while allowing Western and Arab troops to deploy on its soil for the liberation of Kuwait the following year. A burgeoning population, aquifer depletion, and an economy largely dependent on petroleum output and prices are all major governmental concerns.

Economy

Economy - overview: This is an oil-based economy with strong government controls over major economic activities. Saudi Arabia has the largest reserves of petroleum in the world (26% of the proved reserves), ranks as the largest exporter of petroleum, and plays a leading role in OPEC. The petroleum sector accounts for roughly 75% of budget revenues, 45% of GDP, and 90% of export earnings. About 25% of GDP comes from the private sector. Roughly 4 million foreign workers play an important role in the Saudi economy, for example, in the oil and service sectors. Riyadh expects to have a budget deficit in 2002, in part because of increased spending for education and other social programs. The government in 1999 announced plans to begin privatizing the electricity companies, which follows the ongoing privatization of the telecommunications company. The government is expected to continue calling for private sector growth to lessen the kingdom's dependence on oil and increase employment opportunities for the swelling Saudi population. Shortages of water and rapid population growth will constrain government efforts to increase self-sufficiency in agricultural products.

Senegal

Introduction

Background: Independent from France in 1960, Senegal joined with The Gambia to form the nominal confederation of Senegambia in 1982. However, the envisaged integration of the two countries was never carried out, and the union was dissolved in 1989. Despite peace talks, a southern separatist group sporadically has clashed with government forces since 1982. Senegal has a long history of participating in international peacekeeping.

Economy

Economy - overview: In January 1994, Senegal undertook a bold and ambitious economic reform program with the support of the international donor community. This reform began with a 50% devaluation of Senegal's currency, the CFA franc, which is linked at a fixed rate to the French franc. Government price controls and subsidies have been steadily dismantled. After seeing its economy contract by 2.1% in 1993, Senegal made an important turnaround, thanks to the reform program, with real growth in GDP averaging 5% annually during 1995-2001. Annual inflation had been pushed down to less than 1%, but rose to an estimated 3.3% in 2001. Investment rose steadily from 13.8% of GDP in 1993 to 16.5% in 1997. As a member of the West African Economic and Monetary Union (WAEMU), Senegal is working toward greater regional integration with a unified external tariff. Senegal also realized full Internet connectivity in 1996, creating a miniboom in information technology-based services. Private activity now accounts for 82% of GDP. On the negative side, Senegal faces deep-seated urban problems of chronic unemployment, trade union militancy, juvenile delinquency, and drug addiction.

Economy

Economy - overview: Since independence in 1976, per capita output in this Indian Ocean archipelago has expanded to roughly seven times the old near-subsistence level. Growth has been led by the tourist sector, which employs about 30% of the labor force and provides more than 70% of hard currency earnings, and by tuna fishing. In recent years the government has encouraged foreign investment in order to upgrade hotels and other services. At the same time, the government has moved to reduce the dependence on tourism by promoting the development of farming, fishing, and small-scale manufacturing. The vulnerability of the tourist sector was illustrated by the sharp drop in 1991-92 due largely to the Gulf war and once again following the 11 September 2001 terrorist attacks on the US. Other issues facing the government are the curbing of the budget deficit, including the containment of social welfare costs, and further privatization of public enterprises. Growth slowed in 1998-2001, due to sluggish tourist and tuna sectors. Also, tight controls on exchange rates and the scarcity of foreign exchange have impaired short-term economic prospects. The black market value of the Seychelles rupee is half the official exchange rate; without a devaluation of the currency the tourist sector should remain sluggish as vacationers seek cheaper destinations such as Comoros, Mauritius, and Madagascar.

Sierra Leone

Introduction

Background: Since 1991, civil war between the government and the Revolutionary United Front (RUF) has resulted in tens of thousands of deaths and the displacement of more than 2 million people (well over one-third of the population) many of whom are now refugees in neighboring countries. After several setbacks, the end to the eleven-year conflict in Sierra Leone may finally be near at hand. With the support of the UN peacekeeping force and contributions from the World Bank and international community, demobilization and disarmament of the RUF and Civil Defense Forces (CDF) combatants has been completed. Reestablishment of government authority throughout the country is slowly proceeding and national elections took place in May 2002.

Economy

Economy - overview: Sierra Leone is an extremely poor African nation with tremendous inequality in income distribution. It does have substantial mineral, agricultural, and fishery resources. However, the economic and social infrastructure is not well developed, and serious social disorders continue to hamper economic development, following a 10-year civil war. About two-thirds of the working-age population engages in subsistence agriculture. Manufacturing consists mainly of the processing of raw materials and of light manufacturing for the domestic market. There are plans to reopen bauxite and rutile mines shut down during the conflict. The major source of hard currency consists of the mining of diamonds. The fate of the economy depends upon the maintenance of domestic peace and the continued receipt of substantial aid from abroad.

Economy

Economy - overview: Singapore, a highly developed and successful free-market economy, enjoys a remarkably open and corruption-free environment, stable prices, and one of the highest per capita GDPs in the world. The economy depends heavily on exports, particularly in electronics and manufacturing, and was hard hit in 2001 by the global recession and the slump in the technology sector. In 2001, GDP contracted by 2.2%. The economy is expected to recover in 2002 in response to improvements in the US economy, and GDP growth for 2002 is projected to be 3% to 4%. In the longer term the government hopes to establish a new growth path that will be less vulnerable to the external business cycle than the current export-led model, but is unlikely to abandon efforts to establish Singapore as Southeast Asia's financial and high-tech hub.

Slovakia

Introduction

Background: In 1918 the Slovaks joined the closely related Czechs to form Czechoslovakia. Following the chaos of World War II, Czechoslovakia became a Communist nation within Soviet-ruled Eastern Europe. Soviet influence collapsed in 1989 and Czechoslovakia once more became free. The Slovaks and the Czechs agreed to separate peacefully on 1 January 1993. Historic, political, and geographic factors have caused Slovakia to experience more difficulty in developing a modern market economy than some of its Central European neighbors.

Economy

Economy - overview: Slovakia has mastered much of the difficult transition from a centrally planned economy to a modern market economy. The DZURINDA government made excellent progress in 2001 in macroeconomic stabilization and structural reform. Major privatizations are nearly complete, the banking sector is almost completely in foreign hands, and foreign investment has picked up. Slovakia's economy exceeded expectations in 2001, despite recession in key export markets. Revival of domestic demand, partly due to a rise in real wages, offset slowing export growth to help drive the economy to its strongest expansion since 1998. Solid domestic demand is expected to boost economic growth to 3.4% in 2002, and about 4% in 2003. Unemployment, rising to 19.8% at the end of 2001, remained the economy's Achilles' heel. The government faces other strong challenges in 2002, especially the maintenance of fiscal balance ahead of the September 2002 parliamentary election, cutting budget and current account deficits, and privatization of the Slovak energy and power monopolies.

Disputes - international: Slovakia requested additional ICJ judgment in 1998, and talks continue to set modalities to assure Hungarian compliance with 1997 ICJ decision to proceed with construction of Gabčíkovo-Nagymaros Dam, abandoned by Hungary in 1989

Illicit drugs: transshipment point for Southwest Asian heroin bound for Western Europe; producer of synthetic drugs for regional market

Slovenia

Introduction

Background: The Slovene lands were part of the Holy Roman Empire and Austria until 1918 when the Slovenes joined the Serbs and Croats in forming a new nation, renamed Yugoslavia in 1929. After World War II, Slovenia became a republic of the renewed Yugoslavia, which though Communist, distanced itself from Moscow's rule. Dissatisfied with the exercise of power of the majority Serbs, the Slovenes succeeded in establishing their independence in 1991. Historical ties to Western Europe, a strong economy, and a stable democracy make Slovenia a leading candidate for future membership in the EU and NATO.

from the coat of arms of the Counts of Celje, the great Slovene dynastic house of the late 14th and early 15th centuries); the seal is located in the upper hoist side of the flag centered in the white and blue bands

Economy

Economy - overview: Although Slovenia enjoys a GDP per capita substantially higher than that of the other transitioning economies of Central Europe, it needs to speed up the privatization process and the dismantling of restrictions on foreign investment. About 45% of the economy remains in state hands, and the level of foreign direct investment inflows as a

percent of GDP is the lowest in the region. Despite the global slowdown in 2001, the economy turned in an excellent record on exports, which grew 5%. Inflation dropped slightly but at 8.4% remains a matter of concern.

Transnational Issues

Disputes - international: Slovenia and Croatia have not obtained parliamentary ratification of 2001 land and marine boundary treaty, which cedes villages on the Dragonja River and Sveta Gera (Trdinov Peak) to Croatia, and most of Pirin Bay to Slovenia but restricts Slovenian access to the open sea; Austria has minor dispute with Slovenia over nuclear power plants and post-World War II treatment of German-speaking minorities

Illicit drugs: minor transit point for cocaine and Southwest Asian heroin bound for Western Europe, and for precursor chemicals

Solomon Islands

Introduction

Background: The UK established a protectorate over the Solomon Islands in the 1890s. Some of the most bitter fighting of World War II occurred on these islands. Self-government was achieved in 1976 and independence two years later. Ethnic violence, government malfeasance, and endemic crime have undermined stability and civil society.

Economy

Economy - overview: The bulk of the population depends on agriculture, fishing, and forestry for at least part of their livelihood. Most manufactured goods and petroleum products must be imported. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. However, severe ethnic violence, the closing of key business enterprises, and an empty government treasury have led to serious economic disarray, indeed near collapse. Tanker deliveries of crucial fuel supplies (including those for electrical generation) have become sporadic due to the government's inability to pay and attacks against ships. Telecommunications are threatened by the nonpayment of bills and by the lack of technical and maintenance staff many of whom have left the country.

Somalia

Introduction

Background: The SIAD BARRE regime was ousted in January 1991; turmoil, factional fighting, and anarchy have followed for eleven years. In May of 1991, northern clans declared an independent Republic of Somaliland that now includes the administrative regions of Awdal, Woqooyi Galbeed, Togdheer, Sanaag, and Sool. Although not recognized by any government, this entity has maintained a stable existence, aided by the overwhelming dominance of a ruling clan and economic infrastructure left behind by British, Russian, and American military assistance programs. The regions of Bari and Nugaal comprise a neighboring self-declared autonomous state of Puntland, which has been self-governing since 1998, but does not aim at independence; it has also made strides towards reconstructing legitimate, representative government. Puntland also claims Sool and eastern Sanaag. Beginning in 1993, a two-year UN humanitarian effort (primarily in the south) was able to alleviate famine conditions, but when the UN withdrew in 1995, having suffered significant casualties, order still had not been restored. A Transitional National Government (TNG) was created in August 2000 in Arta, Djibouti which was attended by a broad representation of Somali clans. The TNG has a three-year mandate to create a permanent national Somali government. The TNG does not recognize Somaliland as an independent republic but so far has been unable to reunite either Somaliland or Puntland with the unstable regions in the south. Numerous warlords and factions are still fighting for control of Mogadishu and the other southern regions. Suspicion of Somali links with global terrorism complicate the picture.

Independence: 1 July 1960 (from a merger of British Somaliland, which became independent from the UK on 26 June 1960, and Italian Somaliland, which became independent from the Italian-administered UN trusteeship on 1 July 1960, to form the Somali Republic)

National holiday: Foundation of the Somali Republic, 1 July (1960); note - 26 June (1960) in Somaliland

Constitution: 25 August 1979, presidential approval 23 September 1979

note: the Transitional National Government formed in August 2000 has a mandate to create a new constitution and hold elections within three years

Legal system: no national system; Shari'a and secular courts are in some localities

Suffrage: 18 years of age; universal

Executive branch:

chief of state: ABDIKASSIM Salad Hassan (since 26 August 2000); note - Interim President

ABDIKASSIM was chosen for a three-year term by a 245-member National Assembly serving as a transitional government; the present political situation is still unstable, particularly in the south, with interclan fighting and random banditry

head of government: Prime Minister HASSAN Abshir Farah (since 12 November 2001)

cabinet: Cabinet appointed by the prime minister and sworn in on 20 October 2000; as of 1 January 2002, the Cabinet was in caretaker status following a no-confidence vote in October 2001 that ousted HASSAN's predecessor

election results: ABDIKASSIM Salad Hassan was elected president of an interim government at the Djibouti-sponsored Arta Peace Conference on 26 August 2000 by a broad representation of Somali clans that comprised a transitional National Assembly

Legislative branch: unicameral People's Assembly or Golaha Shacbiga

note: fledgling parliament; a transitional 245-member National Assembly began to meet on 13 August 2000 in the town of Arta, Djibouti and is now based in Mogadishu

Judicial branch: following the breakdown of national government, most regions have reverted to Islamic (Shari'a) law with a provision for appeal of all sentences

Political parties and leaders: none

Political pressure groups and leaders: numerous clan and subclan factions are currently vying for power

Government - note: An interim Transitional National Government - with a president, prime minister, and 245-member National Assembly - was established in Mogadishu in October 2000. However, other governing bodies continue to exist and control various cities and regions of the country, including Somaliland, Puntland, and traditional clan and faction strongholds.

Economy

Economy - overview: One of the world's poorest and least developed countries, Somalia has few resources and is prone to drought. Moreover, much of the economy has been devastated by civil war since 1991. Agriculture is the most important sector, with livestock accounting for about 40% of GDP and about 65% of export earnings. Nomads and semi-nomads, who are dependent upon livestock for their livelihood, make up a large portion of the population. Livestock, hides, charcoal, and bananas are Somalia's principal exports, while sugar, sorghum, corn, fish, qat, and machined goods are the principal imports. Somalia's small industrial sector, based on the processing of agricultural products, has largely been looted and sold as scrap metal. Despite the seeming anarchy, Somalia's service sector has managed to survive and grow. Telecommunication firms provide wireless services in most major cities and offer the lowest international call rates on the continent. In the absence of a formal banking sector, money exchange services have sprouted throughout the country, handling between \$200 million and \$500 million in remittances annually. Mogadishu's main market offers a variety of goods from food to the newest electronic gadgets. Hotels continue to operate, and security is provided by militias. Ongoing civil disturbances and clan rivalries, however, have interfered with any broad-based economic development and international aid arrangements. The failure of spring rains caused major food shortages in the south in 2001. Economic data is scarce and prone to a wide margin of error.

Transnational Issues

Disputes - international: most of the southern half of the boundary with Ethiopia is a provisional administrative line; in the Ogaden, regional states have established a variety of conflicting relationships with the Transitional National Government in Mogadishu, feuding factions in Puntland region, and the economically stable break-away "Somaliland" region; Djibouti maintains economic ties and border accords with "Somaliland" leadership while politically supporting Somali Transitional National Government in Mogadishu; arms smuggling and Oromo rebel activities prompt strict border regime with Kenya

South Africa

Introduction

Background: After the British seized the Cape of Good Hope area in 1806, many of the Dutch settlers (the Boers) trekked north to found their own republics. The discovery of diamonds (1867) and gold (1886) spurred wealth and immigration and intensified the subjugation of the native inhabitants. The Boers resisted British encroachments, but were defeated in the Boer War (1899-1902). The resulting Union of South Africa operated under a policy of apartheid - the separate development of the races. The 1990s brought an end to apartheid politically and ushered in black majority rule.

Flag description: two equal width horizontal bands of red (top) and blue separated by a central green band which splits into a horizontal Y, the arms of which end at the corners of the hoist side; the Y embraces a black isosceles triangle from which the arms are separated by narrow yellow bands; the red and blue bands are separated from the green band and its arms by narrow white stripes

note: prior to 26 April 1994, the flag was actually four flags in one - three miniature flags reproduced in the center of the white band of the former flag of the Netherlands, which had three equal horizontal bands of orange (top), white, and blue; the miniature flags were a vertically hanging flag of the old Orange Free State with a horizontal flag of the UK adjoining on the hoist side and a horizontal flag of the old Transvaal Republic adjoining on the other side

Economy

Economy - overview: South Africa is a middle-income, developing country with an abundant supply of resources, well-developed financial, legal, communications, energy, and transport sectors, a stock exchange that ranks among the 10 largest in the world, and a modern infrastructure supporting an efficient distribution of goods to major urban centers throughout the region. However, growth has not been strong enough to cut into high unemployment, and daunting economic problems remain from the

apartheid era, especially the problems of poverty and lack of economic empowerment among the disadvantaged groups. Other problems are crime, corruption, and HIV/AIDS. At the start of 2000, President Mbeki vowed to promote economic growth and foreign investment, and to reduce poverty by relaxing restrictive labor laws, stepping up the pace of privatization, and cutting unneeded governmental spending. The economy slowed in 2001, largely the result of the slowing of the international economy.

Transnational Issues

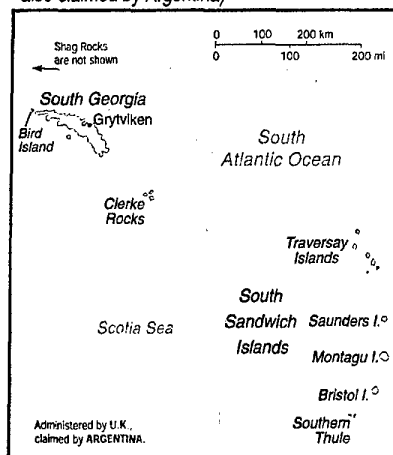

Disputes - international: Swaziland continues to press South Africa into ceding ethnic Swazi lands in Kangwane region of KwaZulu-Natal province, that were long ago part of the Swazi Kingdom

Illicit drugs: transshipment center for heroin, hashish, marijuana, and possibly cocaine; cocaine consumption on the rise; world's largest market for illicit methaqualone, usually imported illegally from India through various east African countries; illicit cultivation of marijuana

South Georgia and the South Sandwich Islands

(overseas territory of the UK, also claimed by Argentina)

Introduction

Background: The islands lie approximately 1,000 km east of the Falkland Islands and have been under British administration since 1908 except for a brief period in 1982 when Argentina occupied them. Grytviken, on South Georgia, was a 19th and early 20th century whaling station. The famed explorer Ernest SHACKLETON stopped there in 1914 en route to his ill-fated attempt to cross Antarctica on foot. He returned some 20 months later with a few companions in a small boat and arranged a successful rescue for the rest of his crew, stranded off the Antarctic Peninsula. He died in 1922 on a subsequent expedition and is buried in Grytviken. Today, the station houses scientists from the British Antarctic Survey. The islands have large bird and seal populations and, recognizing the importance of preserving the marine stocks in adjacent waters, the UK, in 1993, extended the exclusive fishing zone from 12 NM to 200 NM around each island.

Geography

Location: Southern South America, islands in the South Atlantic Ocean, east of the tip of South America

Geographic coordinates: 54 30 S, 37 00 W

Area:

total: 3,903 sq km

land: 3,903 sq km

water: 0 sq km

note: includes Shag Rocks, Black Rock, Clerke Rocks, South Georgia Island, Bird Island, and the South Sandwich Islands, which consist of some nine islands

Area - comparative: slightly larger than Rhode Island

South Georgia and the South Sandwich Islands *(continued)*

Land boundaries: 0 km

Coastline: NA km

Maritime claims:

exclusive fishing zone: 200 NM

territorial sea: 12 NM

Climate: variable, with mostly westerly winds throughout the year interspersed with periods of calm; nearly all precipitation falls as snow

Terrain: most of the islands, rising steeply from the sea, are rugged and mountainous: South Georgia is largely barren and has steep, glacier-covered mountains; the South Sandwich Islands are of volcanic origin with some active volcanoes

Elevation extremes:

lowest point: Atlantic Ocean 0 m

highest point: Mount Paget (South Georgia) 2,934 m

Natural resources: fish

Land use:

arable land: 0%

permanent crops: 0%

other: 100% (largely covered by permanent ice and snow with some sparse vegetation consisting of grass, moss, and lichen) (1998 est.)

Irrigated land: 0 sq km (1998 est.)

Natural hazards: the South Sandwich Islands have prevailing weather conditions that generally make them difficult to approach by ship; they are also subject to active volcanism

Environment - current issues: NA

Geography - note: the north coast of South Georgia has several large bays, which provide good anchorage; reindeer, introduced early in the 21st century, live on South Georgia

People

Population: no indigenous inhabitants

note: the small military garrison on South Georgia withdrew in March 2001, to be replaced by a permanent group of scientists of the British Antarctic Survey, which also has a biological station on Bird Island; the South Sandwich Islands are uninhabited (July 2002 est.)

Country name:

conventional long form: South Georgia and the South Sandwich Islands

conventional short form: none

Dependency status: overseas territory of the UK, also claimed by Argentina; administered from the Falkland Islands by a commissioner, who is concurrently governor of the Falkland Islands, representing Queen ELIZABETH II; Grytviken, formerly a whaling station on South Georgia, is a scientific base

National holiday: Liberation Day, 14 June (1982)

Constitution: adopted 3 October 1985

Legal system: the laws of the UK, where applicable, apply; the senior magistrate from the Falkland Islands presides over the Magistrates Court

Diplomatic representation in the US: none (overseas territory of the UK, also claimed by Argentina)

Diplomatic representation from the US: none (overseas territory of the UK, also claimed by Argentina)

Flag description: the flag of the UK is used

Economy

Economy - overview: Some fishing takes place in adjacent waters. There is a potential source of income from harvesting fin fish and krill. The islands receive income from postage stamps produced in the UK, sale of fishing licenses, and harbor and landing fees from tourist vessels. Tourism from specialized cruise ships is increasing rapidly.

Southern Ocean

Introduction

Background: A decision by the International Hydrographic Organization in the spring of 2000 delimited a fifth world ocean - the Southern Ocean - from the southern portions of the Atlantic Ocean, Indian Ocean, and Pacific Ocean. The Southern Ocean extends from the coast of Antarctica north to 60 degrees south latitude, which coincides with the Antarctic Treaty Limit. The Southern Ocean is now the fourth largest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, and Indian Ocean, but larger than the Arctic Ocean).

Geography

Location: body of water between 60 degrees south latitude and Antarctica

Geographic coordinates: 65 00 S, 0 00 E

(nominally), but the Southern Ocean has the unique distinction of being a large circumpolar body of water totally encircling the continent of Antarctica; this ring of water lies between 60 degrees south latitude and the coast of Antarctica, and encompasses 360 degrees of longitude

Map references: Antarctic Region

Area:

total: 20.327 million sq km

note: includes Amundsen Sea, Bellingshausen Sea, part of the Drake Passage, Ross Sea, a small part of the Scotia Sea, Weddell Sea, and other tributary water bodies

Area - comparative: slightly more than twice the size of the US

Coastline: 17,968 km

Climate: sea temperatures vary from about 10 degrees Celsius to -2 degrees Celsius; cyclonic storms travel eastward around the continent and frequently are intense because of the temperature contrast between ice and open ocean; the ocean area from about latitude 40 south to the Antarctic Circle has the strongest average winds found anywhere on

Southern Ocean (continued)

Earth; in winter the ocean freezes outward to 65 degrees south latitude in the Pacific sector and 55 degrees south latitude in the Atlantic sector, lowering surface temperatures well below 0 degrees Celsius; at some coastal points intense persistent drainage winds from the interior keep the shoreline ice-free throughout the winter

Terrain: the Southern Ocean is deep, 4,000 to 5,000 meters over most of its extent with only limited areas of shallow water; the Antarctic continental shelf is generally narrow and unusually deep - its edge lying at depths of 400 to 800 meters (the global mean is 133 meters); the Antarctic icepack grows from an average minimum of 2.6 million square kilometers in March to about 18.8 million square kilometers in September, better than a sixfold increase in area; the Antarctic Circumpolar Current (21,000 km in length) moves perpetually eastward; it is the world's largest ocean current, transporting 130 million cubic meters of water per second - 100 times the flow of all the world's rivers

Elevation extremes:

lowest point: -7,235 m at the southern end of the South Sandwich Trench

highest point: sea level 0 m

Natural resources: probable large and possible giant oil and gas fields on the continental margin, manganese nodules, possible placer deposits, sand and gravel, fresh water as icebergs, squid, whales, and seals - none exploited; krill, fishes

Natural hazards: huge icebergs with drafts up to several hundred meters; smaller bergs and iceberg fragments; sea ice (generally 0.5 to 1 meter thick) with sometimes dynamic short-term variations and with large annual and interannual variations; deep continental shelf floored by glacial deposits varying widely over short distances; high winds and large waves much of the year; ship icing, especially May-October; most of region is remote from sources of search and rescue

Environment - current issues: increased solar ultraviolet radiation resulting from the Antarctic ozone hole in recent years, reducing marine primary productivity (phytoplankton) by as much as 15% and damaging the DNA of some fish; illegal, unreported, and unregulated fishing in recent years, especially the landing of an estimated five to six times more Patagonian toothfish than the regulated fishery, which is likely to affect the sustainability of the stock; large amount of incidental mortality of seabirds resulting from long-line fishing for toothfish

note: the now-protected fur seal population is making a strong comeback after severe overexploitation in the 18th and 19th centuries

Environment - International agreements: the Southern Ocean is subject to all international agreements regarding the world's oceans; in addition, it is subject to these agreements specific to the Antarctic region: International Whaling Commission (prohibits commercial whaling south of 40 degrees south [south of 60 degrees south between 50 degrees and 130 degrees west]); Convention on the

Conservation of Antarctic Seals (limits sealing); Convention on the Conservation of Antarctic Marine Living Resources (regulates fishing)

note: many nations (including the US) prohibit mineral resource exploration and exploitation south of the fluctuating Polar Front (Antarctic Convergence) which is in the middle of the Antarctic Circumpolar Current and serves as the dividing line between the very cold polar surface waters to the south and the warmer waters to the north

Geography - note: the major chokepoint is the Drake Passage between South America and Antarctica; the Polar Front (Antarctic Convergence) is the best natural definition of the northern extent of the Southern Ocean; it is a distinct region at the middle of the Antarctic Circumpolar Current that separates the very cold polar surface waters to the south from the warmer waters to the north; the Front and the Current extend entirely around Antarctica, reaching south of 60 degrees south near New Zealand and near 48 degrees south in the far South Atlantic coinciding with the path of the maximum westerly winds

Economy

Economy - overview: Fisheries in 2000-01 (1 July to 30 June) landed 112,934 metric tons, of which 87% was krill and 11% Patagonian toothfish. International agreements were adopted in late 1999 to reduce illegal, unreported, and unregulated fishing, which in the 2000-01 season landed, by one estimate, 8,376 metric tons of Patagonian and antarctic toothfish. In the 2000-01 antarctic summer 12,248 tourists, most of them seaborne, visited the Southern Ocean and Antarctica, compared to 14,762 the previous year.

Transportation

Ports and harbors: McMurdo, Palmer, and offshore anchorages in Antarctica

note: few ports or harbors exist on the southern side of the Southern Ocean; ice conditions limit use of most of them to short periods in midsummer; even then some cannot be entered without icebreaker escort; most antarctic ports are operated by government research stations and, except in an emergency, are not open to commercial or private vessels; vessels in any port south of 60 degrees south are subject to inspection by Antarctic Treaty observers (see Article 7)

Transportation - note: Drake Passage offers alternative to transit through the Panama Canal

Transnational Issues

Disputes - International: Antarctic Treaty defers claims (see Antarctica entry), but Argentina, Australia, Chile, France, New Zealand, Norway, and UK assert claims (some overlapping), including the continental shelf in the Southern Ocean; several states have expressed an interest in extending those continental shelf claims under the United Nations Convention on the Law of the Sea (LOS) to include undersea ridges;

the US and most other states do not recognize the land or maritime claims of other states and have made no claims themselves (the US and Russia have reserved the right to do so); no formal claims have been made in the sector between 90 degrees west and 150 degrees west

Spain

Introduction

Background: Spain's powerful world empire of the 16th and 17th centuries ultimately yielded command of the seas to England. Subsequent failure to embrace the mercantile and industrial revolutions caused the country to fall behind Britain, France, and Germany in economic and political power. Spain remained neutral in World Wars I and II, but suffered through a devastating civil war (1936-39). In the second half of the 20th century, Spain has played a catch-up role in the western international community. Continuing concerns are Basque Fatherland and Liberty (ETA) terrorism and further reductions in unemployment.

Economy

Economy - overview: Spain's mixed capitalist economy supports a GDP that on a per capita basis is 80% that of the four leading West European economies. Its center-right government successfully worked to gain admission to the first group of countries launching the European single currency on 1 January 1999. The AZNAR administration has continued to advocate liberalization, privatization, and deregulation of the economy and has introduced some tax reforms to that end. Unemployment has been steadily falling under the AZNAR administration but remains the highest in the EU at 13%. The government intends to make further progress in changing labor laws and reforming pension schemes,

which are key to the sustainability of both Spain's internal economic advances and its competitiveness in a single currency area. Adjusting to the monetary and other economic policies of an integrated Europe - and further reducing unemployment - will pose challenges to Spain over the next few years.

Transnational Issues

Disputes - international: Spain and UK are discussing "total shared sovereignty" over Gibraltar, subject to a constitutional referendum by Gibraltarians, who have largely expressed opposition to any form of cession to Spain; Spain controls the coastal enclaves of Ceuta and Melilla, which Morocco contests, as well as the islands of Penon de

Alhucemas, Penon de Velez de la Gomera, and Islas Chafarinas; Morocco rejected Spain's unilateral designation of a median line from the Canary Islands in 2002 to explore undersea resources and to interdict illegal refugees from Africa

Illicit drugs: key European gateway country for Latin American cocaine and North African hashish entering the European market; destination and minor transshipment point for Southwest Asian heroin

Spratly Islands

Introduction

Background: This archipelago - surrounded by rich fishing grounds and potentially by gas and oil deposits - is claimed in its entirety by China, Taiwan, and Vietnam, while portions are claimed by Malaysia and the Philippines. All five parties occupy certain islands or reefs.

Geography

Location: Southeastern Asia, group of reefs and islands in the South China Sea, about two-thirds of the way from southern Vietnam to the southern Philippines

Geographic coordinates: 8 38 N, 111 55 E

Map references: Southeast Asia

Area:

total: less than 5 sq km

land: less than 5 sq km

water: 0 sq km

note: includes 100 or so islets, coral reefs, and sea mounts scattered over an area of nearly 410,000 sq km of the central South China Sea

Area - comparative: NA

Land boundaries: 0 km

Coastline: 926 km

conventional long form: none

conventional short form: Spratly Islands

Economy

Economy - overview: Economic activity is limited to commercial fishing. The proximity to nearby oil- and gas-producing sedimentary basins suggests the potential for oil and gas deposits, but the region is largely unexplored, and there are no reliable estimates of potential reserves; commercial exploitation has yet to be developed.

Military

Military - note: Spratly Islands consist of more than 100 small islands or reefs, of which about 45 are claimed and occupied by China, Malaysia, the Philippines, Taiwan, and Vietnam

Transnational Issues

Disputes - international: all of the Spratly Islands are claimed by China, Taiwan, and Vietnam; parts of them are claimed by Malaysia and the Philippines; in 1984, Brunei established an exclusive fishing zone that encompasses Louisa Reef in the southern Spratly Islands, but has not publicly claimed the island; in 2000, China joined ASEAN discussions towards creating a South China Sea "code of conduct" - a non-legally binding confidence building measure

Sri Lanka

Introduction

Background: Occupied by the Portuguese in the 16th century and the Dutch in the 17th century, the island was ceded to the British in 1802. As Ceylon it became independent in 1948; its name was changed in 1972. Tensions between the Sinhalese majority and Tamil separatists erupted in violence in the mid-1980s. Tens of thousands have died in an ethnic war that continues to fester.

Economy

Economy - overview: In 1977, Colombo abandoned statist economic policies and its import substitution trade policy for market-oriented policies and export-oriented trade. Sri Lanka's most dynamic sectors now are food processing, textiles and apparel, food and beverages, telecommunications, and insurance and banking. By 1996 plantation crops made up only 20% of exports (compared with 93% in 1970), while textiles and garments accounted for 63%. GDP grew at an average annual rate of 5.5% throughout the 1990s until a drought and a deteriorating security situation lowered growth to 3.8% in 1996. The economy rebounded in 1997-2000 with average growth of 5.3%. But 2001 saw the first contraction in the country's history, due to a combination of power shortages, severe budgetary problems, the global slowdown, and continuing civil strife.

Sudan

Introduction

Background: Military dictatorships favoring an Islamic-oriented government have dominated national politics since independence from the UK in 1956. Sudan has been embroiled in a civil war for all but 10 years of this period (1972-82). Since 1983, the war and war- and famine-related effects have led to more than 2 million deaths and over 4 million people displaced. The war pits the Arab/Muslim majority in Khartoum against the non-Muslim African rebels in the south. Since 1989, traditional northern Muslim parties have made common cause with the southern rebels and entered the war as a part of an anti-government alliance.

Economy

Economy - overview: Sudan has turned around a struggling economy with sound economic policies and infrastructure investments, but it still faces formidable economic problems. Starting in 1997 Sudan began implementing IMF macroeconomic reforms that have successfully stabilized inflation. In 1999 Sudan began exporting crude oil and in the last quarter of 1999 recorded its first trade surplus, along with monetary policy, has stabilized the exchange rate. Current oil production stands at 220,000 barrels per day, of which some 70% is exported and the rest refined mostly for domestic consumption. Increased oil production, revived light industry, and expanded export processing zones should maintain GDP growth at 5% in 2002. Agriculture production remains Sudan's most important sector, employing 80% of the work force and contributing 43% of GDP, but most farms remain rain-fed and susceptible to drought. Sudan is also constrained by its limited access to international credit; most of Sudan's \$24.9 billion debt remains in arrears. The civil war, chronic instability, adverse weather, and weak world agricultural prices ensure that much of the population will remain at or below the poverty line for years.

Transnational Issues

Disputes - international: Sudan agrees in 2002 to demarcate whole boundary with Ethiopia; Egypt and Sudan each claim to administer triangular areas which extend north and south of the 1899 Treaty boundary along the 22nd Parallel (the north "Hala'ib Triangle" is the largest with 20,580 sq km); in 2001, the two states agreed to discuss an "area of integration" and withdraw military forces in the overlapping areas; since colonial times, Kenya's administrative boundary has extended beyond its treaty boundary into Sudan creating the "Ilemi Triangle"

Suriname

Introduction

Background: Independence from the Netherlands was granted in 1975. Five years later the civilian government was replaced by a military regime that soon declared a socialist republic. It continued to rule through a succession of nominally civilian administrations until 1987, when international pressure finally forced a democratic election. In 1989, the military overthrew the civilian government, but a democratically-elected government returned to power in 1991.

Economy

Economy - overview: The economy is dominated by the bauxite industry, which accounts for more than 15% of GDP and 70% of export earnings. Suriname's economic prospects for the medium term will depend on renewed commitment to responsible monetary and fiscal policies and to the introduction of structural reforms to liberalize markets and promote competition. The government of Ronald VENETIAAN has begun an austerity program, raised taxes, and attempted to control spending. The Dutch Government has restarted the aid flow, which will allow Suriname to access international development financing.

Svalbard

(territory of Norway)

Introduction

Background: First discovered by the Norwegians in the 12th century, the islands served as an international whaling base during the 17th and 18th centuries. Norway's sovereignty was recognized in 1920; five years later it officially took over the territory.

Geography

Area - comparative: slightly smaller than West Virginia

Land boundaries: 0 km

Coastline: 3,587 km

Maritime claims:

exclusive fishing zone: 200 NM unilaterally claimed by Norway but not recognized by Russia

territorial sea: 4 NM

Climate: arctic, tempered by warm North Atlantic Current; cool summers, cold winters; North Atlantic Current flows along west and north coasts of Spitsbergen, keeping water open and navigable most of the year

Terrain: wild, rugged mountains; much of high land ice covered; west coast clear of ice about one-half of the year; fjords along west and north coasts

Elevation extremes:

Economy

Economy - overview: Coal mining is the major economic activity on Svalbard. The treaty of 9 February 1920 gives the 41 signatories equal rights to exploit mineral deposits, subject to Norwegian regulation. Although US, UK, Dutch, and Swedish coal companies have mined in the past, the only companies still mining are Norwegian and Russian. The settlements on Svalbard are essentially company towns. The Norwegian state-owned coal company employs nearly 60% of the Norwegian population on the island, runs many of the local services, and provides most of the local infrastructure. There is also some trapping of seal, polar bear, fox, and walrus.

Swaziland

Introduction

Background: Autonomy for the Swazis of southern Africa was guaranteed by the British in the late 19th century; independence was granted 1968. Student and labor unrest during the 1990s have pressured the monarchy (one of the oldest on the continent) to grudgingly allow political reform and greater democracy.

Economy

Economy - overview: In this small landlocked economy, subsistence agriculture occupies more than 80% of the population. Manufacturing features a number of agroprocessing factories. Mining has declined in importance in recent years: diamond mines have shut down because of the depletion of easily accessible reserves; high-grade iron ore deposits were depleted by 1978; and health concerns have cut world demand for asbestos. Exports of soft drink concentrate, sugar, and wood pulp are the main earners of hard currency. Surrounded by South Africa, except for a short border with Mozambique, Swaziland is heavily dependent on South Africa from which it receives nine-tenths of its imports and to which it sends more than two-thirds of its exports. Remittances from the Southern African Customs Union and Swazi workers in South African mines substantially supplement domestically earned income. The government is trying to improve the atmosphere for foreign investment. Overgrazing, soil depletion, drought, and sometimes floods persist as problems for the future. Prospects for 2002 are strengthened by the country's status as a beneficiary of the US African Growth and Opportunity Act initiative.

Sweden

Introduction

Background: A military power during the 17th century, Sweden has not participated in any war in almost two centuries. An armed neutrality was preserved in both World Wars. Sweden's long-successful economic formula of a capitalist system interlarded with substantial welfare elements was challenged in the 1990s by high unemployment, rising maintenance costs, and a declining position in world markets. Indecision over the country's role in the political and economic integration of Europe delayed Sweden's entry into the EU until 1995, and waived the introduction of the euro in 1999.

Economy

Economy - overview: Aided by peace and neutrality for the whole 20th century, Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. It has a modern distribution system, excellent internal and external communications, and a skilled labor force. Timber, hydropower, and iron ore constitute the resource base of an economy heavily oriented toward foreign trade. Privately owned firms account for about 90% of industrial output, of which the engineering sector accounts for 50% of output and exports.

Agriculture accounts for only 2% of GDP and 2% of the jobs. The government's commitment to fiscal discipline resulted in a substantive budgetary surplus in 2001, but is expected to shrink somewhat in 2002, due to the global economic slowdown, tax cuts, and spending increases. The Swedish central bank (the Riksbank) is focusing on price stability with an inflation target of 2% for 2002.

Switzerland

Introduction

Background: Switzerland's independence and neutrality have long been honored by the major European powers and Switzerland was not involved in either of the two World Wars. The political and economic integration of Europe over the past half century, as well as Switzerland's role in many UN and international organizations has strengthened Switzerland's ties with its neighbors. Switzerland is active in many UN and international organizations, but retains a strong commitment to neutrality.

Economy

Economy - overview: Switzerland is a prosperous and stable modern market economy with a per capita GDP higher than that of the big western European economies. The Swiss in recent years have brought their economic practices largely into conformity with the EU's to enhance their international competitiveness. Although the Swiss are not pursuing full EU membership in the near term, in 1999 Bern and Brussels signed agreements to further liberalize trade ties. They continue to discuss further areas for cooperation. Switzerland remains a safe haven for investors, because it has maintained a degree of bank secrecy and has kept up the franc's long-term external

value. The GDP growth rate dipped to 1.6% in 2001, and the government projects that it will slow further to 1.3% in 2002.

Syria

Introduction

Background: Following the breakup of the Ottoman Empire during World War I, Syria was administered by the French until independence in 1946. In the 1967 Arab-Israeli War, Syria lost the Golan Heights to Israel. Since 1976, Syrian troops have been stationed in Lebanon, ostensibly in a peacekeeping capacity. In recent years, Syria and Israel have held occasional peace talks over the return of the Golan Heights.

Economy

Economy - overview: Syria's predominantly statist economy has been growing slower than its 2.5% annual population growth rate, causing a persistent decline in per capita GDP. President Bashar AL-ASAD has made little progress on the economic front after one year in office, but does appear willing to permit a gradual strengthening of the private sector. His most obvious accomplishment to this end was the recent passage of legislation allowing private banks to operate in Syria, although a private banking sector will take years and further government cooperation to develop. ASAD's recent cabinet reshuffle may improve his chances of implementing further growth-oriented policies, although external factors such as the international war on terrorism, the Israeli-Palestinian conflict, and downturn in oil prices could weaken the foreign investment and government revenues Syria needs to flourish. A long-run economic constraint is the pressure on water supplies caused by rapid population growth, industrial expansion, and increased water pollution.

Introduction

Background: Tajikistan has experienced three changes in government and a five-year civil war since it gained independence in 1991 from the USSR. A peace agreement among rival factions was signed in 1997, and implemented in 2000. The central government's less than total control over some areas of the country has forced it to compromise and forge alliances among factions. Open skirmishes in the streets are less of a problem than they were during the war five years ago. Attention by the international community in the wake of the war in Afghanistan may bring increased economic development assistance, which would create jobs and increase stability in the long term. Tajikistan is in the beginning stages of seeking World Trade Organization membership and has been approved to join NATO's Partnership for Peace.

Economy

Economy - overview: Tajikistan has the lowest per capita GDP among the 15 former Soviet republics. Cotton is the most important crop. Mineral resources, varied but limited in amount, include silver, gold, uranium, and tungsten. Industry consists only of a large aluminum plant, hydropower facilities, and small obsolete factories mostly in light industry and food processing. The civil war (1992-97) severely damaged the already weak economic infrastructure and caused a sharp decline in industrial and agricultural production. Even though 80% of its people continue to live in abject poverty, Tajikistan has experienced strong economic growth since 1997. Continued privatization of medium and large state-owned enterprises will further increase productivity. Tajikistan's economic situation, however, remains fragile due to uneven implementation of structural reforms, weak governance, and the external debt burden. Servicing of the debt, owed principally to Russia and Uzbekistan, could require as much as 50% of government revenues in 2002, thus limiting the nation's ability to meet pressing development needs.

Transnational Issues

Disputes - international: the undemarcated northern and western border with Uzbekistan is mined in many sections; continues to maintain a territorial dispute with Kyrgyzstan in Isfara Valley area; ongoing talks with China have failed to resolve the longstanding dispute over the indefinite boundary; Kazakhstan, Tajikistan, Turkmenistan, and

Uzbekistan wrestle with sharing limited water resources and the regional environmental degradation caused by the shrinking of the Aral Sea
Illicit drugs: major transshipment zone for heroin and opiates from Afghanistan going to Russia and Western Europe; limited illicit cultivation of narcotics crops, mostly for domestic consumption

Tanzania

Introduction

Background: Shortly after independence, Tanganyika and Zanzibar merged to form the nation of Tanzania in 1964. One-party rule came to an end in 1995 with the first democratic elections held in the country since the 1970s. Zanzibar's semi-autonomous status and popular opposition have led to two contentious elections since 1995, which the ruling party won despite international observers' claims of voting irregularities.

Irrigated land: 1,550 sq km (1998 est.)

Natural hazards: flooding on the central plateau during the rainy season; drought

Environment - current issues: soil degradation; deforestation; desertification; destruction of coral reefs threatens marine habitats; recent droughts affected marginal agriculture; wildlife threatened by illegal hunting and trade, especially for ivory

Environment - international agreements:

party to: Biodiversity, Climate Change, Desertification, Endangered Species, Hazardous Wastes, Law of the Sea, Ozone Layer Protection, Wetlands

signed, but not ratified: Nuclear Test Ban

Geography - note: Kilimanjaro is highest point in Africa; bordered by three of the largest lakes on the continent: Lake Victoria (the world's second-largest freshwater lake) in the north, Lake Tanganyika (the world's second deepest) in the west, and Lake Nyasa in the southwest

People

Population: 37,187,939

note: estimates for this country explicitly take into account the effects of excess mortality due to AIDS; this can result in lower life expectancy, higher infant mortality and death rates, lower population and growth rates, and changes in the distribution of population by age and sex than would otherwise be expected (July 2002 est.)

Age structure:

0-14 years: 44.6% (male 8,338,764; female 8,247,789)

15-64 years: 52.5% (male 9,674,951; female 9,847,084)

65 years and over: 2.9% (male 483,760; female 595,591) (2002 est.)

Population growth rate: 2.6% (2002 est.)

Birth rate: 39.12 births/1,000 population (2002 est.)

Death rate: 13.02 deaths/1,000 population (2002 est.)

Net migration rate: -0.08 migrant(s)/1,000 population (2002 est.)

Sex ratio:

Economy

Economy - overview: Tanzania is one of the poorest countries in the world. The economy is heavily dependent on agriculture, which accounts for half of GDP, provides 85% of exports, and employs 80% of the work force. Topography and climatic conditions, however, limit cultivated crops to only 4% of the land area. Industry is mainly limited to processing agricultural products and light consumer goods. The World Bank, the International Monetary Fund, and bilateral donors have provided funds to rehabilitate Tanzania's deteriorated economic infrastructure. Growth in 1991-2001 featured a pickup in industrial production and a substantial increase in output of minerals, led by gold. Natural gas exploration in the

Rufiji Delta looks promising and production could start by 2002. Recent banking reforms have helped increase private sector growth and investment. Continued donor support and solid macroeconomic policies should support steady real GDP growth of 5% in 2002 and 2003.

GDP: purchasing power parity - \$22.1 billion (2001 est.)

GDP - real growth rate: 5% (2001 est.)

Thailand

Introduction

Background: A unified Thai kingdom was established in the mid-14th century. Known as Siam until 1939, Thailand is the only Southeast Asian country never to have been taken over by a European power. A bloodless revolution in 1932 led to a constitutional monarchy. In alliance with Japan during World War II, Thailand became a US ally following the conflict.

Economy

Economy - overview: After enjoying the world's highest growth rate from 1985 to 1995 - averaging almost 9% annually - increased speculative pressure on Thailand's currency in 1997 led to a crisis that uncovered financial sector weaknesses and forced the government to float the baht. Long pegged at 25 to the dollar, the baht reached its lowest point of 56 to the dollar in January 1998 and the economy contracted by 10.2% that same year. Thailand entered a recovery stage in 1999, expanding 4.2% and grew 4.4% in 2000, largely due to strong exports - which increased about 20% in 2000. An ailing financial sector and the slow pace of corporate debt restructuring, combined with a softening of global demand, however, slowed growth in 2001 to 1.4%.

Transnational Issues

Disputes - international: a one km stretch of Malaysia-Thailand territory at the mouth of the Kolok river remains in dispute, despite overall success in boundary redemarcation; Cambodia accuses Thailand of moving or destroying boundary markers and encroachment, of not respecting its claims, and of sealing off access to the Preah Vihear temple ruin awarded to Cambodia by the ICJ in 1962;

demarcation of boundary with Laos is nearing completion, but Mekong River islets remain in dispute; Laos also protests Thai squatters; despite renewed border committee talks, significant differences remain with Burma over boundary alignment and the handling of ethnic guerrilla rebels, refugees, smuggling, and drug trafficking in cross-border region

Illicit drugs: a minor producer of opium, heroin, and marijuana; illicit transit point for heroin en route to the international drug market from Burma and Laos; eradication efforts have reduced the area of cannabis cultivation and shifted some production to neighboring countries; opium poppy cultivation has been reduced by eradication efforts; also a drug money-laundering center; minor role in amphetamine production for regional consumption; increasing indigenous abuse of methamphetamine

Togo

Introduction

Background: French Togoland became Togo in 1960. General Gnassingbe EYADEMA, installed as military ruler in 1967, is Africa's longest-serving head of state. Despite the facade of multiparty elections instituted in the early 1990s, the government continues to be dominated by President EYADEMA, whose Rally of the Togolese People (RPT) party has maintained power almost continually since 1967. In addition, Togo has come under fire from international organizations for human rights abuses and is plagued by political unrest. Most bilateral and multilateral aid to Togo remains frozen.

Economy

Economy - overview: This small sub-Saharan economy is heavily dependent on both commercial and subsistence agriculture, which provides employment for 65% of the labor force. Some basic foodstuffs must still be imported. Cocoa, coffee, and cotton generate about 40% of export earnings, with cotton being the most significant cash crop despite falling prices on the world market. Political unrest, including private and public sector strikes throughout 1992 and 1993, jeopardized the reform program, shrunk the tax base, and disrupted vital economic activity. The 12 January 1994 devaluation of the XOF currency by 50% provided an important impetus to renewed structural adjustment. In the industrial sector, phosphate mining is by far the most important activity. Togo is the world's fourth largest producer, and geological advantages keep production costs low. The recently privatized mining operation, Office Togolais des Phosphates (OTP), is slowly recovering from a steep fall in prices in the early 1990's, but continues to face the challenge of tough foreign competition, exacerbated by weakening demand. Togo serves as a regional commercial and trade center. It continues to expand its duty-free export-processing zone (EPZ), launched in 1989, which has attracted enterprises from France, Italy, Scandinavia, the US, India, and China and created jobs for Togolese nationals. The government's decade-long effort, supported by the World Bank and the IMF, to implement economic reform measures, encourage foreign investment, and bring revenues in line with expenditures has stalled. Progress depends on following through on privatization, increased openness in government financial operations, progress towards legislative elections, and possible downsizing of the military, on which the regime has depended to stay in place. Lack of large-scale foreign aid, deterioration of the financial sector, energy shortages, and depressed commodity prices continue to constrain economic growth. The takeover of the national power company by a Franco-Canadian consortium in 2000 should ease the energy crisis. **GDP:** purchasing power parity - \$7.6 billion (2001 est.) **GDP - real growth rate:** 2.2% (2001 est.) **GDP - per capita:** purchasing power parity - \$1,500 (2001 est.) **GDP - composition by sector:** agriculture: 42% industry: 21% services: 37% (2001 est.) **Population below poverty line:** 32% (1989 est.)

Economy

Economy - overview: Tokelau's small size (three villages), isolation, and lack of resources greatly restrain economic development and confine agriculture to the subsistence level. The people rely heavily on aid from New Zealand - about \$4 million annually - to maintain public services, annual aid being substantially greater than GDP. The principal sources of revenue come from sales of copra, postage stamps, souvenir coins, and handicrafts. Money is also remitted to families from relatives in New Zealand.

Tonga

Introduction

Background: The archipelago of "The Friendly Islands" was united into a Polynesian kingdom in 1845. It became a constitutional monarchy in 1875 and a British protectorate in 1900. Tonga acquired its independence in 1970 and became a member of the Commonwealth of Nations. It remains the only monarchy in the Pacific.

Economy

Economy - overview: Tonga has a small, open economy with a narrow export base in agricultural goods. Squash, coconuts, bananas, and vanilla beans are the main crops, and agricultural exports make up two-thirds of total exports. The country must import a high proportion of its food, mainly from New Zealand. Tourism is the second largest source of hard currency earnings following remittances. The country remains dependent on external aid and remittances from Tongan communities overseas to offset its trade deficit. The government is emphasizing the development of the private sector, especially the encouragement of investment, and is committing increased funds for health and education. Tonga has a reasonable basic infrastructure and well-developed social services.

Economy

Economy - overview: Trinidad and Tobago has earned a reputation as an excellent investment site for international businesses. A leading performer in the past 4 years has been the booming natural gas sector. Tourism is a growing sector, although not proportionately as important as in many other Caribbean islands. The expected recovery of the global economy, along with anticipated higher oil prices, are plus factors for 2002. Negative factors are persistent high unemployment and the political uncertainties following the contentious selection of a new government in December 2001.

Tunisia

Introduction

Background: Following independence from France in 1956, President Habib BOURGUIBA established a strict one-party state. He dominated the country for 31 years, repressing Islamic fundamentalism and establishing rights for women unmatched by any other Arab nation. In recent years, Tunisia has taken a moderate, non-aligned stance in its foreign relations. Domestically, it has sought to diffuse rising pressure for a more open political society.

Economy

Economy - overview: Tunisia has a diverse economy, with important agricultural, mining, energy, tourism, and manufacturing sectors. Governmental control of economic affairs while still heavy has gradually lessened over the past decade with increasing privatization, simplification of the tax structure, and a prudent approach to debt. Real growth averaged 5.4% in the past five years, and

inflation is slowing. Growth in tourism and increased trade have been key elements in this steady growth, although tourism revenues have slowed since 11 September 2001 and may take a year or more to fully recover. Tunisia's association agreement with the European Union entered into force on 1 March 1998, the first such accord between the EU and a Mediterranean country. Under the agreement Tunisia will gradually remove barriers to trade with the EU over the next decade. Broader privatization, further liberalization of the investment code to increase foreign investment, and improvements in government efficiency are among the challenges for the future.

Turkey

Introduction

Background: Turkey was created in 1923 from the Turkish remnants of the Ottoman Empire. Soon thereafter the country instituted secular laws to replace traditional religious fiats. In 1945 Turkey joined the UN and in 1952 it became a member of NATO. Turkey occupied the northern portion of Cyprus in 1974 to prevent a Greek takeover of the island; relations between the two countries remain strained but have begun to improve over the past three years. In 1984, the Kurdistan Workers' Party (PKK), a Marxist-Leninist, separatist group, initiated an insurgency in Southeast Turkey, often using terrorist tactics to try to attain its goal of an independent Kurdistan. The group - whose leader, Abdullah Ocalan, was captured in Kenya in February 1999 and sentenced to death by a Turkish court - has observed a unilateral cease-fire since September 1999, although there have been occasional clashes between Turkish military units and some of the 4,000-5,000 armed PKK militants, most of whom currently are encamped in northern Iraq. The PKK changed its name to the Kurdistan Freedom and Democracy Congress (KADEK) in April 2002.

Economy

Economy - overview: Turkey's dynamic economy is a complex mix of modern industry and commerce along with a traditional agriculture sector that in 2001 still accounted for 40% of employment. It has a strong and rapidly growing private sector, yet the state still plays a major role in basic industry, banking, transport, and communication. The most important industry - and largest exporter - is textiles and clothing, which is almost entirely in private hands. In

Turkey (continued)

recent years the economic situation has been marked by erratic economic growth and serious imbalances. Real GNP growth has exceeded 6% in most years, but this strong expansion was interrupted by sharp declines in output in 1994, 1999, and 2001.

Meanwhile the public sector fiscal deficit has regularly exceeded 10% of GDP - due in large part to the huge burden of interest payments, which in 2001 accounted for more than 50% of central government spending - while inflation has remained in the high double digit range. Perhaps because of these problems, foreign direct investment in Turkey remains low - less than \$1 billion annually. In late 2000 and early 2001 a growing trade deficit and serious weaknesses in the banking sector plunged the economy into crisis - forcing Ankara to float the lira and pushing the country into recession. Prospects for 2002 are much better, because of strong financial support from the IMF, tighter fiscal policy, a major bank restructuring program, and the enactment of numerous other economic reforms.

Transnational Issues

Disputes - international: complex maritime, air, and territorial disputes with Greece in Aegean Sea; Cyprus question with Greece; dispute with downstream riparian states (Syria and Iraq) over water development plans for the Tigris and Euphrates

Turkey (continued)

rivers; traditional demands regarding former Armenian lands in Turkey have subsided; Turkey is quick to rebuff any perceived Syrian claim to Hatay province; border with Armenia remains closed over Nagorno-Karabakh dispute

Illicit drugs: key transit route for Southwest Asian heroin to Western Europe and - to a far lesser extent the US - via air, land, and sea routes; major Turkish, Iranian, and other international trafficking organizations operate out of Istanbul; laboratories to convert imported morphine base into heroin are in remote regions of Turkey as well as near Istanbul; government maintains strict controls over areas of legal opium poppy cultivation and output of poppy straw concentrate

Turkmenistan

Introduction

Background: Annexed by Russia between 1865 and 1885, Turkmenistan became a Soviet republic in 1925. It achieved its independence upon the dissolution of the USSR in 1991. President NIYAZOV retains absolute control over the country and opposition is not tolerated. Extensive hydrocarbon/natural gas reserves could prove a boon to this underdeveloped country if extraction and delivery projects can be worked out.

Economy

Economy - overview: Turkmenistan is largely desert country with intensive agriculture in irrigated oases and huge gas (fifth largest reserves in the world) and oil resources. One-half of its irrigated land is planted in cotton, making it the world's tenth largest producer. Until the end of 1993, Turkmenistan had experienced less economic disruption than other former Soviet states because its economy received a boost from higher prices for oil and gas and a sharp increase in hard currency earnings. In 1994, Russia's refusal to export Turkmen gas to hard currency markets and mounting debts of its major customers in the former USSR for gas deliveries contributed to a sharp fall in industrial production and caused the budget to shift from a surplus to a slight deficit. With an authoritarian ex-Communist regime in power and a tribally based social structure, Turkmenistan has taken a cautious approach to economic reform, hoping to use gas and cotton sales to sustain its inefficient economy. Privatization goals remain limited. In 1998-2001, Turkmenistan has suffered from the continued lack of adequate export routes for natural gas and from obligations on extensive short-term external debt. At the same time, however, total exports have risen sharply because of higher international oil and gas prices. Prospects in the near future are discouraging because of widespread internal poverty, the burden of foreign debt, and the unwillingness of the government to adopt market-oriented reforms. However, Turkmenistan's cooperation with the international community in transporting humanitarian aid to Afghanistan may foreshadow a change in the atmosphere for foreign investment, aid, and technological support. Turkmenistan's economic statistics are state secrets, and GDP and other figures are subject to wide margins of error.

Illicit drugs: limited illicit cultivator of opium poppy, mostly for domestic consumption; limited government eradication program; increasingly used as transshipment point for illicit drugs from Southwest Asia to Russia and Western Europe; also a transshipment point for acetic anhydride destined for Afghanistan

Turks and Caicos Islands

(overseas territory of the UK)

Introduction

Background: The islands were part of the UK's Jamaican colony until 1962, when they assumed the status of a separate crown colony upon Jamaica's independence. The governor of The Bahamas oversaw affairs from 1965 to 1973. With Bahamian independence, the islands received a separate governor in 1973. Although independence was agreed upon for 1982, the policy was reversed and the islands are presently a British overseas territory.

Tuvalu

Introduction

Background: In 1974, ethnic differences within the British colony of the Gilbert and Ellice Islands caused the Polynesians of the Ellice Islands to vote for separation from the Micronesians of the Gilbert Islands. The following year, the Ellice Islands became the separate British colony of Tuvalu. Independence was granted in 1978. In 2000, Tuvalu negotiated a contract leasing its Internet domain name ".tv" for \$50 million in royalties over the next dozen years.

Geography

Location: Oceania, island group consisting of nine coral atolls in the South Pacific Ocean, about one-half of the way from Hawaii to Australia

Geographic coordinates: 8 00 S, 178 00 E

Tuvalu (continued)

Irrigated land: NA sq km

Natural hazards: severe tropical storms are usually rare, but, in 1997, there were three cyclones; low level of islands make them very sensitive to changes in sea level

Environment - current issues: since there are no streams or rivers and groundwater is not potable, most water needs must be met by catchment systems with storage facilities (the Japanese Government has built one desalination plant and plans to build one other); beachhead erosion because of the use of sand for building materials; excessive clearance of forest undergrowth for use as fuel; damage to coral reefs from the spread of the Crown of Thorns starfish; Tuvalu is very concerned about global increases in greenhouse gas emissions and their effect on rising sea levels, which threaten the country's underground water table; in 2000, the government appealed to Australia and New Zealand to take in Tuvaluans if rising sea levels should make evacuation necessary

Environment - international agreements: party to: Climate Change, Climate Change-Kyoto Protocol, Desertification, Ozone Layer Protection, Ship Pollution

signed, but not ratified: Biodiversity, Law of the Sea

Geography - note: one of the smallest and most remote countries on Earth; six of the coral atolls - Nanumea, Nui, Vaitupu, Nukufetau, Funafuti, and Nukulaelae - have lagoons open to the ocean; Nanumaya and Niutao have landlocked lagoons; Niulakita does not have a lagoon

Economy

Economy - overview: Tuvalu consists of a densely populated, scattered group of nine coral atolls with poor soil. The country has no known mineral resources and few exports. Subsistence farming and fishing are the primary economic activities. Fewer than 1,000 tourists, on average, visit Tuvalu annually. Government revenues largely come from the sale of stamps and coins and worker remittances. About 1,000 Tuvaluans work in Nauru in the phosphate mining industry. Nauru has begun repatriating Tuvaluans, however, as phosphate resources decline. Substantial income is received annually from an international trust fund established in 1987 by Australia, NZ, and the UK and supported also by Japan and South Korea. Thanks to wise investments and conservative withdrawals, this Fund has grown from an initial \$17 million to over \$35 million in 1999. The US government is also a major revenue source for Tuvalu, with 1999 payments from a 1988 treaty on fisheries at about \$9 million, a total which is expected to rise annually. In an effort to reduce its dependence on foreign aid, the government is pursuing public sector reforms, including privatization of some government functions and personnel cuts of up to 7%. In 1998, Tuvalu began deriving revenue from use of its area code for "900" lines and in 2000, from the lease of its ".tv" Internet domain name. Royalties from these new technology sources could raise GDP substantially over the next decade. With merchandise exports only a fraction of merchandise imports, continued reliance must be placed on fishing and telecommunications license fees, remittances from overseas workers, official transfers, and investment income from overseas assets.

Uganda

Introduction

Background: Uganda achieved independence from the UK in 1962. The dictatorial regime of Idi AMIN (1971-79) was responsible for the deaths of some 300,000 opponents; guerrilla war and human rights abuses under Milton OBOTE (1980-85) claimed another 100,000 lives. During the 1990s the government promulgated non-party presidential and legislative elections.

Economy

Economy - overview: Uganda has substantial natural resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee is the major export crop and accounts for the bulk of export revenues. Since 1986, the government - with the support of foreign countries and international agencies - has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing prices of petroleum products, and improving civil service wages. The policy changes are especially aimed at dampening inflation and boosting production and export earnings. During 1990-2001, the economy turned in a solid performance based on continued investment in the rehabilitation of infrastructure, improved incentives for production and exports, reduced inflation, gradually improved domestic security, and the return of exiled Indian-Ugandan entrepreneurs. Ongoing Ugandan involvement in the war in the Democratic Republic of the Congo, corruption within the government, and slippage in the government's determination to press reforms raise doubts about the continuation of strong growth. In 2000, Uganda qualified for enhanced Highly Indebted Poor Countries (HIPC) debt relief worth \$1.3 billion and Paris Club debt relief worth \$145 million. These amounts combined with the original HIPC debt relief added up to about \$2 billion. Growth for 2001 was held back because of a continued decline in the price of coffee, Uganda's principal export.

Ukraine

Introduction

Background: Richly endowed in natural resources, Ukraine has been fought over and subjugated for centuries; its 20th-century struggle for liberty is not yet complete. A short-lived independence from Russia (1917-1920) was followed by brutal Soviet rule that engineered two artificial famines (1921-22 and 1932-33) in which over 8 million died, and World War II, in which German and Soviet armies were responsible for some 7 million more deaths. Although independence was attained in 1991 with the dissolution of the USSR, true freedom remains elusive as many of the former Soviet elite remain entrenched, stalling efforts at economic reform, privatization, and civil liberties.

Economy

Economy - overview: After Russia, the Ukrainian republic was far and away the most important economic component of the former Soviet Union, producing about four times the output of the next-ranking republic. Its fertile black soil generated more than one-fourth of Soviet agricultural output, and its farms provided substantial quantities of meat, milk, grain, and vegetables to other republics. Likewise, its diversified heavy industry supplied the unique equipment (for example, large diameter pipes) and raw materials to industrial and mining sites (vertical drilling apparatus) in other regions of the former USSR. Ukraine depends on imports of energy, especially natural gas, to meet some 85% of its annual energy requirements. Shortly after independence in late 1991, the Ukrainian Government liberalized most prices and erected a legal framework for privatization, but widespread resistance to reform within the government and the legislature soon stalled reform efforts and led to some backtracking. Output by 1999 had fallen to less than 40% the 1991 level. Loose monetary policies pushed inflation to hyperinflationary levels in late 1993. Ukraine's dependence on Russia for energy supplies and the lack of significant structural reform have made the Ukrainian economy vulnerable to external shocks. Now in his second term, President KUCHMA has pledged to reduce the number of government agencies, streamline the regulatory process, create a legal environment to encourage entrepreneurs, and enact a comprehensive tax overhaul. Reforms in the more politically sensitive areas of structural reform and land privatization are still lagging. Outside institutions - particularly the IMF - have encouraged Ukraine to quicken the pace and scope of reforms and have threatened to withdraw financial support. GDP in 2000 showed strong export-based growth of 6% - the first growth since independence - and industrial production grew 12.9%. The economy continued to expand in 2001 as real GDP rose 9% and industrial output grew by over 14%. Growth was undergirded by strong domestic demand and growing consumer and investor confidence.

Ukraine (continued)

Illicit drugs: limited cultivation of cannabis and opium poppy, mostly for CIS consumption; some synthetic drug production for export to West; limited government eradication program; used as transshipment point for opiates and other illicit drugs from Africa, Latin America, and Turkey, and to Europe and Russia; drug-related money laundering a minor, but growing, problem

United Arab Emirates

Introduction

Background: The Trucial States of the Persian Gulf coast granted the UK control of their defense and foreign affairs in 19th century treaties. In 1971, six of these states - Abu Zaby, 'Ajman, Al Fujayrah, Ash Shariqah, Dubayy, and Umm al Qaywayn - merged to form the United Arab Emirates (UAE). They were joined in 1972 by Ra's al Khaymah. The UAE's per capita GDP is not far below those of leading West European nations. Its generosity with oil revenues and its moderate foreign policy stance have allowed the UAE to play a vital role in the affairs of the region.

Economy

Economy - overview: The UAE has an open economy with a high per capita income and a sizable annual trade surplus. Its wealth is based on oil and gas output (about 33% of GDP), and the fortunes of the economy fluctuate with the prices of those commodities. Since 1973, the UAE has undergone a profound transformation from an impoverished region of small desert principalities to a modern state with a high standard of living. At present levels of production, oil and gas reserves should last for more than 100 years. The government has increased spending on job creation and infrastructure expansion and is opening up its utilities to greater private sector involvement.

Transnational Issues

Disputes - international: Oman signed boundary treaty with the UAE in 1999, but complete UAE-Oman boundary line is not expected until the end of 2002; undefined segments remain with Ra's al-Khaymah and Ash Shariqah (Sharjah) emirates, including the Musandam Peninsula, where an administrative boundary substitutes for an international boundary; because details of 1974 and 1977 treaties have not been made public, the exact location of the Saudi Arabia-UAE boundary is unknown and status is considered de facto; UAE seeks United Arab League and other international support against Iran's occupation of Greater Tunb Island (called Tunb al Kubra in Arabic by UAE and Jazireh-ye Tonb-e Bozorg in Persian by Iran) and Lesser Tunb Island (called Tunb as Sughra in Arabic by UAE and Jazireh-ye Tonb-e Kuchek in Persian by Iran) and attempts to occupy completely a jointly administered island in the Persian Gulf (called Abu Musa in Arabic by UAE and Jazireh-ye Abu Musa in Persian by Iran)
Illicit drugs: The UAE is a drug transshipment point for traffickers given its proximity to southwest Asian drug producing countries; the UAE's position as a major financial center makes it vulnerable to money laundering; anti-money-laundering legislation was signed into law by the president on 25 January 2002

United Kingdom

Introduction

Background: Great Britain, the dominant industrial and maritime power of the 19th century, played a leading role in developing parliamentary democracy and in advancing literature and science. At its zenith, the British Empire stretched over one-fourth of the earth's surface. The first half of the 20th century saw the UK's strength seriously depleted in two World Wars. The second half witnessed the dismantling of the Empire and the UK rebuilding itself into a modern and prosperous European nation. As one of five permanent members of the UN Security Council, a founding member of NATO, and of the Commonwealth, the UK pursues a global approach to foreign policy; it currently is weighing the degree of its integration with continental Europe. A member of the EU, it chose to remain outside the European Monetary Union for the time being. Constitutional reform is also a significant issue in the UK. The Scottish Parliament, the National Assembly for Wales, and the Northern Ireland Assembly were established in 1999.

Geography

Location: Western Europe, islands including the northern one-sixth of the island of Ireland between the North Atlantic Ocean and the North Sea, northwest of France

Geographic coordinates: 54 00 N, 2 00 W

Map references: Europe

Area:

total: 244,820 sq km

land: 241,590 sq km

water: 3,230 sq km

note: includes Rockall and Shetland Islands

Area - comparative: slightly smaller than Oregon

Land boundaries:

total: 360 km

border countries: Ireland 360 km

Coastline: 12,429 km

Maritime claims:

continental shelf: as defined in continental shelf orders or in accordance with agreed upon boundaries

exclusive fishing zone: 200 NM

territorial sea: 12 NM

Climate: temperate; moderated by prevailing southwest winds over the North Atlantic Current; more than one-half of the days are overcast

Terrain: mostly rugged hills and low mountains; level to rolling plains in east and southeast

Elevation extremes:

lowest point: Fennel -4 m

highest point: Ben Nevis 1,343 m

Natural resources: coal, petroleum, natural gas, tin, limestone, iron ore, salt, clay, chalk, gypsum, lead, silica, arable land

Land use:

arable land: 26%

permanent crops: 0%

other: 74% (1998 est.)

Irrigated land: 1,080 sq km (1998 est.)

Natural hazards: winter windstorms; floods

Environment - current issues: continues to reduce greenhouse gas emissions (has met Kyoto Protocol target of a 12.5% reduction from 1990 levels and intends to meet the legally binding target and move towards a domestic goal of a 20% cut in emissions by 2010); by 2005 the Government aims to reduce the amount of industrial and commercial waste disposed of in landfill sites to 85% of 1998 levels and to recycle or compost at least 25% of household waste, increasing to 33% by 2015; between 1998-99 and 1999-2000, household recycling increased from 8.8% to 10.3%

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Air Pollution-Sulphur 94, Air Pollution-Volatile Organic Compounds, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Marine Life Conservation, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands, Whaling

signed, but not ratified: Air Pollution-Persistent Organic Pollutants, Climate Change-Kyoto Protocol
Geography - note: lies near vital North Atlantic sea lanes; only 35 km from France and now linked by tunnel under the English Channel; because of heavily indented coastline, no location is more than 125 km from tidal waters

Economy

Economy - overview: The UK, a leading trading power and financial center, is one of the quartet of trillion dollar economies of Western Europe. Over the past two decades the government has greatly reduced public ownership and contained the growth of social welfare programs. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with only 1% of the labor force. The UK has large coal, natural gas, and oil reserves; primary energy production accounts for 10% of GDP, one of the highest shares of any industrial nation. Services, particularly banking, insurance, and business services, account by far for the largest proportion of GDP while industry continues to decline in importance. GDP growth slipped in 2001 as the global downturn, the high value of the pound, and the bursting of the "new economy" bubble hurt manufacturing and exports. Still, the economy is one of the strongest in Europe; inflation, interest rates, and unemployment remain low, and the government expects growth of 2% to 2.5% in 2002. The relatively good economic performance has complicated the BLAIR government's efforts to make a case for Britain to join the European Economic and Monetary Union (EMU). The Prime Minister has pledged to hold a public referendum if membership meets Chancellor of

United Kingdom (continued)

the Exchequer BROWN's five economic "tests."

Scheduled for assessment by mid-2003, the tests will determine whether joining EMU would have a positive effect on British investment, employment, and growth. Critics point out, however, that the economy is thriving outside of EMU, and they point to public opinion polls that continue to show a majority of Britons opposed to the single currency.

Transnational Issues

Disputes - international: Spain and UK are discussing "total shared sovereignty" over Gibraltar, subject to a constitutional referendum by Gibraltarians, who have largely expressed opposition to any form of cession to Spain; Mauritius and Seychelles claim the Chagos Archipelago (British Indian Ocean Territory) and its former inhabitants, who reside chiefly in Mauritius, but in 2001 were granted UK citizenship and the right to repatriation since eviction in 1965; Argentina claims the Falkland Islands (Islas Malvinas) and South Georgia and the South Sandwich Islands; Rockall continental shelf dispute involving Denmark and Iceland; territorial claim in Antarctica (British Antarctic Territory) overlaps Argentine claim and partially overlaps Chilean claim; disputes with Iceland, Denmark, and Ireland over the Faroe Islands continental shelf boundary outside 200 NM

Illicit drugs: gateway country for Latin American cocaine entering the European market; major consumer of synthetic drugs, producer of limited amounts of synthetic drugs and synthetic precursor chemicals; major consumer of Southwest Asian heroin; money-laundering center

United States

Introduction

Background: Britain's American colonies broke with the mother country in 1776 and were recognized as the new nation of the United States of America following the Treaty of Paris in 1783. During the 19th and 20th centuries, 37 new states were added to the original 13 as the nation expanded across the North American continent and acquired a number of overseas possessions. The two most traumatic experiences in the nation's history were the Civil War (1861-65) and the Great Depression of the 1930s. Buoyed by victories in World Wars I and II and the end of the Cold War in 1991, the US remains the world's most powerful nation-state. The economy is marked by steady growth, low unemployment and inflation, and rapid advances in technology.

Geography

Location: North America, bordering both the North Atlantic Ocean and the North Pacific Ocean, between Canada and Mexico

Geographic coordinates: 38 00 N, 97 00 W

Map references: North America

Area:

total: 9,629,091 sq km

land: 9,158,960 sq km

water: 470,131 sq km

note: includes only the 50 states and District of Columbia

Area - comparative: about half the size of Russia; about three-tenths the size of Africa; about half the size of South America (or slightly larger than Brazil); slightly larger than China; about two and a half times the size of Western Europe

Land boundaries:

total: 12,034 km

border countries: Canada 8,893 km (including 2,477 km with Alaska), Mexico 3,141 km

note: US Naval Base at Guantanamo Bay, Cuba is leased by the US and thus remains part of Cuba; the base boundary is 29 km

Coastline: 19,924 km

Maritime claims:

contiguous zone: 24 NM

continental shelf: not specified

exclusive economic zone: 200 NM

territorial sea: 12 NM

Climate: mostly temperate, but tropical in Hawaii and Florida, arctic in Alaska, semiarid in the great plains west of the Mississippi River, and arid in the Great Basin of the southwest; low winter temperatures in the northwest are ameliorated occasionally in January and February by warm chinook winds from the eastern slopes of the Rocky Mountains

Terrain: vast central plain, mountains in west, hills and low mountains in east; rugged mountains and broad river valleys in Alaska; rugged, volcanic topography in Hawaii

Elevation extremes:

lowest point: Death Valley -86 m

highest point: Mount McKinley 6,194 m

Natural resources: coal, copper, lead, molybdenum, phosphates, uranium, bauxite, gold, iron, mercury, nickel, potash, silver, tungsten, zinc, petroleum, natural gas, timber

Land use:

arable land: 19%

permanent crops: NEGL%

other: 81% (1998 est.)

Irrigated land: 214,000 sq km (1998 est.)

Natural hazards: tsunamis, volcanoes, and earthquake activity around Pacific Basin; hurricanes along the Atlantic and Gulf of Mexico coasts; tornadoes in the midwest and southeast; mud slides in California; forest fires in the west; flooding; permafrost in northern Alaska, a major impediment to development

Environment - current issues: air pollution resulting in acid rain in both the US and Canada; the US is the largest single emitter of carbon dioxide from the burning of fossil fuels; water pollution from runoff of pesticides and fertilizers; very limited natural fresh water resources in much of the western part of the country require careful management; desertification

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Climate Change, Desertification, Endangered Species, Environmental Modification, Marine Dumping, Marine Life Conservation, Nuclear Test Ban, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands, Whaling
signed, but not ratified: Air Pollution-Persistent Organic Pollutants, Air Pollution-Volatile Organic Compounds, Biodiversity, Climate Change-Kyoto Protocol, Hazardous Wastes

Geography - note: world's third-largest country by size (after Russia and Canada) and by population (after China and India); Mt. McKinley is highest point in North America and Death Valley the lowest point on the continent

Economy

Economy - overview: The US has the largest and most technologically powerful economy in the world, with a per capita GDP of \$36,300. In this market-oriented economy, private individuals and business firms make most of the decisions, and the federal and state governments buy needed goods and services predominantly in the private marketplace. US business firms enjoy considerably greater flexibility than their counterparts in Western Europe and Japan in decisions to expand capital plant, lay off surplus workers, and develop new products. At the same time, they face higher barriers to entry in their rivals' home markets than the barriers to entry of foreign firms in US markets. US firms are at or near the forefront in technological advances, especially in computers and in medical, aerospace, and military equipment, although their advantage has narrowed since the end of World War II. The onrush of technology largely explains the gradual development of a "two-tier labor market" in which those at the bottom lack the education and the professional/technical skills of those at the top and, more and more, fail to get comparable pay raises, health insurance coverage, and other benefits. Since 1975, practically all the gains in household income have gone to the top 20% of households. The years 1994-2000 witnessed solid increases in real output, low inflation rates, and a drop in unemployment to below 5%. The year 2001 witnessed the end of the boom psychology and performance, with output increasing only 0.3% and unemployment and business failures rising substantially. The response to the terrorist attacks of September 11 showed the remarkable resilience of the economy. Moderate recovery is expected in 2002, with the GDP growth rate rising to 2.5% or more. A major short-term problem in first half 2002 was a sharp decline in the stock market, fueled in part by the exposure of dubious accounting practices in some major corporations. Long-term problems include inadequate investment in economic infrastructure, rapidly rising medical and pension costs of an aging population, sizable trade deficits, and stagnation of family income in the lower economic groups. **GDP:** purchasing power parity - \$10.082 trillion (2001 est.) **GDP - real growth rate:** 0.3% (2001 est.)

Transnational Issues

Disputes - **International**: maritime boundary disputes with Canada (Dixon Entrance, Beaufort Sea, Strait of Juan de Fuca, Machias Seal Island); US Naval Base at Guantanamo Bay is leased from Cuba and only mutual agreement or US abandonment of the area can terminate the lease; Haiti claims Navassa Island; US has made no territorial claim in Antarctica (but has reserved the right to do so) and does not recognize the claims of any other state; Marshall Islands claims Wake Island

Illicit drugs: consumer of cocaine shipped from Colombia through Mexico and the Caribbean; consumer of heroin, marijuana, and increasingly methamphetamine from Mexico; consumer of high-quality Southeast Asian heroin; illicit producer of cannabis, marijuana, depressants, stimulants, hallucinogens, and methamphetamine; money-laundering center

Uruguay

Introduction

Background: A violent Marxist urban guerrilla movement, the Tupamaros, launched in the late 1960s, led Uruguay's president to agree to military control of his administration in 1973. By the end of the year the rebels had been crushed, but the military continued to expand its hold throughout the government. Civilian rule was not restored until 1985. Uruguay's political and labor conditions are among the freest on the continent.

Geography

Economy

Economy - overview: Uruguay's economy is characterized by an export-oriented agricultural sector, a well-educated workforce, and high levels of social spending. After averaging growth of 5% annually in 1996-98, in 1999-2001 the economy suffered from lower demand in Argentina and Brazil, which together account for nearly half of Uruguay's exports. Despite the severity of the trade shocks, Uruguay's financial indicators remained more stable than those of its neighbors, a reflection of its solid reputation among investors and its investment-grade sovereign bond rating - one of only two in South America. Challenges for the government of President Jorge BATLLE include reducing the budget deficit, expanding Uruguay's trade ties beyond its Mercosur trade partners, and reducing the costs of public services. GDP fell by 1.3% in 2000 and by 1.5% in 2001.

Uzbekistan

Introduction

Background: Russia conquered Uzbekistan in the late 19th century. Stiff resistance to the Red Army after World War I was eventually suppressed and a socialist republic set up in 1924. During the Soviet era, intensive production of "white gold" (cotton) and grain led to overuse of agrochemicals and the depletion of water supplies, which have left the land poisoned and the Aral Sea and certain rivers half dry. Independent since 1991, the country seeks to gradually lessen its dependence on agriculture while developing its mineral and petroleum reserves. Current concerns include insurgency by Islamic militants based in Tajikistan and Afghanistan, a nonconvertible currency, and the curtailment of human rights and democratization.

Maritime claims: none (doubly landlocked)

Climate: mostly midlatitude desert, long, hot summers, mild winters; semiarid grassland in east

Terrain: mostly flat-to-rolling sandy desert with dunes; broad, flat intensely irrigated river valleys along course of Amu Darya, Syr Darya (Sirdaryo), and

Zarafshon; Fergana Valley in east surrounded by mountainous Tajikistan and Kyrgyzstan; shrinking Aral Sea in west

Elevation extremes:

lowest point: Saryqarnish Kuli -12 m

Economy

Economy - overview: Uzbekistan is a dry, landlocked country of which 11% consists of intensely cultivated, irrigated river valleys. More than 60% of its population lives in densely populated rural communities. Uzbekistan is now the world's second largest cotton exporter, a large producer of gold and oil, and a regionally significant producer of chemicals and machinery. Following independence in December 1991, the government sought to prop up its Soviet-style command economy with subsidies and tight controls on production and prices. The state continues to be a dominating influence in the economy and has so far failed to bring about much-needed structural changes. The IMF suspended Uzbekistan's \$185 million standby arrangement in late 1996 because of governmental steps that made impossible fulfillment of Fund conditions. Uzbekistan has responded to the negative external conditions generated by the Asian and Russian financial crises by emphasizing import substitute industrialization and by tightening export and currency controls within its already largely closed economy. Economic policies that have repelled foreign investment are a major factor in the economy's stagnation. A growing debt burden, persistent inflation, and a poor business

climate led to disappointing growth in 2001. However, in December 2001 the government voiced a renewed interest in economic reform, seeking advice from the IMF and other financial institutions.

Telephones - main lines in use: 1.98 million (1999)
Telephones - mobile cellular: 26,000 (1998)
Telephone system:
general assessment: antiquated and inadequate; in serious need of modernization
domestic: the domestic telephone system is being expanded and technologically improved, particularly in Tashkent and Samargand, under contracts with prominent companies in industrialized countries; moreover, by 1998, six cellular networks had been placed in operation - four of the GSM type (Global System for Mobile Communication), one D-AMPS type (Digital Advanced Mobile Phone System), and one AMPS type (Advanced Mobile Phone System)
international: linked by landline or microwave radio relay with CIS member states and to other countries by leased connection via the Moscow international gateway switch; after the completion of the Uzbek link to the Trans-Asia-Europe (TAE) fiber-optic cable, Uzbekistan will be independent of Russian facilities for international communications; Inmarsat also provides an international connection, albeit an expensive one; satellite earth stations - NA (1998)
Radio broadcast stations: AM 20, FM 7, shortwave 10 (1998)

Transnational Issues

Disputes - international: Uzbekistan border largely delimited with Kazakhstan, but unresolved dispute remains over sovereignty of two border villages, Bagys and Turkestan, and around the Arnasay dam; dispute over access to Sokh and other Uzbek enclaves in Kyrgyzstan mars progress on international boundary delimitation; Kazakhstan, Tajikistan, Turkmenistan and Uzbekistan wrestle with sharing limited water resources and the regional environmental degradation caused by the shrinking Aral Sea; the undemarcated northern and western border with Uzbekistan is mined in many sections
Illicit drugs: limited illicit cultivation of cannabis and very small amounts of opium poppy, mostly for domestic consumption, almost entirely eradicated by an effective government eradication program; increasingly used as transshipment point for illicit drugs from Afghanistan to Russia and Western Europe and for acetic anhydride destined for Afghanistan

Economy

Economy - overview: The economy is based primarily on subsistence or small-scale agriculture which provides a living for 65% of the population. Fishing, offshore financial services, and tourism, with about 50,000 visitors in 1997, are other mainstays of the economy. Mineral deposits are negligible; the country has no known petroleum deposits. A small light industry sector caters to the local market. Tax revenues come mainly from import duties. Economic development is hindered by dependence on relatively few commodity exports, vulnerability to natural disasters, and long distances from main markets and between constituent islands. A severe earthquake in November 1999 followed by a tsunami, caused extensive damage to the northern island of Pentecote and left thousands homeless. Another powerful earthquake in January 2002 caused extensive damage in the capital, Port-Vila, and surrounding areas, and also was followed by a tsunami. GDP

Venezuela

Introduction

Background: Venezuela was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Colombia and Ecuador). For most of the first half of the 20th century, Venezuela was ruled by generally benevolent military strongmen, who promoted the oil industry and allowed for some social reforms. Democratically-elected governments have held sway since 1959. Current concerns include: an embattled president who is losing his once solid support among Venezuelans, a divided military, drug-related conflicts along the Colombian border, increasing internal drug consumption, overdependence on the petroleum industry with its price fluctuations, and irresponsible mining operations that are endangering the rain forest and indigenous peoples.

Economy

Economy - overview: The petroleum sector dominates the economy, accounting for roughly a third of GDP, around 80% of export earnings, and more than half of government operating revenues. Venezuelan officials estimate that GDP grew by 2.7% in 2001. A strong rebound in international oil prices fueled the recovery from the steep recession in 1999. Nevertheless, a weak nonoil sector and capital flight - and a temporary fall in oil prices - undercut the recovery. In early 2002, President CHAVEZ changed the exchange rate regime from a crawling peg to a free floating exchange rate, causing the bolivar to depreciate significantly.

Vietnam

Introduction

Background: France occupied all of Vietnam by 1884. Independence was declared after World War II, but the French continued to rule until 1954 when they were defeated by Communist forces under Ho Chi MINH, who took control of the north. US economic and military aid to South Vietnam grew through the 1960s in an attempt to bolster the government, but US armed forces were withdrawn following a cease-fire agreement in 1973. Two years later North Vietnamese forces overran the south. Economic reconstruction of the reunited country has proven difficult as aging Communist Party leaders have only grudgingly initiated reforms necessary for a free market.

Geography

Location: Southeastern Asia, bordering the Gulf of Thailand, Gulf of Tonkin, and South China Sea, alongside China, Laos, and Cambodia

Economy

Economy - overview: Vietnam is a poor, densely populated country that has had to recover from the ravages of war, the loss of financial support from the old Soviet Bloc, and the rigidities of a centrally planned economy. Substantial progress was achieved from 1986 to 1996 in moving forward from an extremely low starting point - growth averaged around 9% per year from 1993 to 1997. The 1997 Asian financial crisis highlighted the problems in the Vietnamese economy but, rather than prompting reform, reaffirmed the government's belief that shifting to a market oriented economy leads to disaster. GDP growth of 8.5% in 1997 fell to 6% in 1998 and 5% in 1999. Growth then rose to 6.8% in 2000 and dropped back to 4.7% in 2001 against the background of global recession. These numbers mask some major difficulties in economic performance. Many domestic industries, including coal, cement, steel, and paper, have reported large stockpiles of inventory and tough competition from more efficient foreign producers. Meanwhile, Vietnamese authorities have moved slowly in implementing the structural reforms needed to revitalize the economy and produce more competitive, export-driven industries. The US-Vietnam Bilateral Trade Agreement entered into force near the end of 2001 and is expected to significantly increase Vietnam's exports to the US. The US is assisting Vietnam with implementing the legal and structural reforms called for in the agreement.

Transnational Issues

Disputes - international: Vietnam disputes several offshore islands with Cambodia, preventing delimitation of a maritime boundary; Cambodia accuses Vietnam of territorial encroachments and initiating armed border incidents in seven provinces; demarcation of boundaries with Laos is nearing completion, but Laos protests Vietnamese squatters; involved in a complex dispute over the Spratly Islands with China, Malaysia, Philippines, Taiwan, and possibly Brunei; maritime boundary with China in the Gulf of Tonkin still awaits ratification; Paracel Islands occupied by China but claimed by Taiwan and Vietnam; demarcation of the land boundary with China has commenced, but details of the alignment have not been made public

Illicit drugs: minor producer of opium poppy with 2,300 hectares cultivated in 2001, capable of producing 15 metric tons of opium; probable minor transit point for Southeast Asian heroin; domestic opium/heroin/methamphetamine addiction problems

Virgin Islands (territory of the US)

Introduction

Background: During the 17th century, the archipelago was divided into two territorial units, one English and the other Danish. Sugarcane, produced by slave labor, drove the islands' economy during the 18th and early 19th centuries. In 1917, the US purchased the Danish portion, which had been in economic decline since the abolition of slavery in 1848.

Economy

Economy - overview: Tourism is the primary economic activity, accounting for more than 70% of GDP and 70% of employment. The islands normally host 2 million visitors a year. The manufacturing sector consists of petroleum refining, textiles, electronics, pharmaceuticals, and watch assembly. The agricultural sector is small, with most food being imported. International business and financial services are a small but growing component of the economy. One of the world's largest petroleum refineries is at Saint Croix. The islands are subject to substantial damage from storms. The government is working to improve fiscal discipline, support construction projects in the private sector, expand tourist facilities, reduce crime, and protect the environment.

Wake Island

(territory of the US)

Introduction

Background: The US annexed Wake Island in 1899 for a cable station. An important air and naval base was constructed in 1940-41. In December 1941 the island was captured by the Japanese and held until the end of World War II. In subsequent years, Wake was developed as a stopover and refueling site for military and commercial aircraft transiting the Pacific. Since 1974, the island's airstrip has been used by the US military and some commercial cargo planes, as well as for emergency landings. There are over 700 landings a year on the island.

Wallis and Futuna *(overseas territory of France)*

Introduction

Background: Although discovered by the Dutch and the British in the 17th and 18th centuries, it was the French who declared a protectorate over the islands in 1842. In 1959, the inhabitants of the islands voted to become a French overseas territory.

West Bank

Introduction

Background: The Israel-PLO Declaration of Principles on Interim Self-Government Arrangements (the DOP), signed in Washington on 13 September 1993, provided for a transitional period not exceeding five years of Palestinian interim self-government in the Gaza Strip and the West Bank. Under the DOP, Israel agreed to transfer certain powers and responsibilities to the Palestinian Authority, which includes the Palestinian Legislative Council elected in January 1996, as part of the interim self-governing arrangements in the West Bank and Gaza Strip. A transfer of powers and responsibilities for the Gaza Strip and Jericho took place pursuant to the Israel-PLO 4 May 1994 Cairo Agreement on the Gaza Strip and the Jericho Area and in additional areas of the West Bank pursuant to the Israel-PLO 28 September 1995 Interim Agreement, the Israel-PLO 15 January 1997 Protocol Concerning Redeployment in Hebron, the Israel-PLO 23 October 1998 Wye River Memorandum, and the 4 September 1999 Sharm el-Sheikh Agreement. The DOP provides that Israel will retain responsibility during the transitional period for external security and for internal security and

public order of settlements and Israeli citizens. Direct negotiations to determine the permanent status of Gaza and West Bank had begun in September 1999 after a three-year hiatus, but have been derailed by a second intifadah that broke out in September 2000. The resulting widespread violence in the West Bank and Gaza Strip, Israel's military response, and instability within the Palestinian Authority continue to undermine progress toward a permanent agreement.

Economy

Economy - overview: Economic output in the West Bank is governed by the Paris Economic Protocol of April 1994 between Israel and the Palestinian Authority. Real per capita GDP for the West Bank and Gaza Strip (WBGS) declined by about one-third between 1992 and 1996 due to the combined effect of falling aggregate incomes and rapid population growth. The downturn in economic activity was largely the result of Israeli closure policies - the imposition of border closures in response to security incidents in Israel - which disrupted labor and commodity market relationships between Israel and the WBGS. The most serious social effect of this downturn was rising unemployment; unemployment in the WBGS during the 1980s was generally under 5%; by 1995 it had

West Bank (continued)

risen to over 20%. Israel's use of comprehensive closures during the next five years decreased and, in 1998, Israel implemented new policies to reduce the impact of closures and other security procedures on the movement of Palestinian goods and labor. These changes fueled an almost three-year-long economic recovery in the West Bank and Gaza Strip; real GDP grew by 5% in 1998 and 6% in 1999. Recovery was upended in the last quarter of 2000 with the outbreak of Palestinian violence, which triggered tight Israeli closures of Palestinian self-rule areas and severely disrupted trade and labor movements. In 2001, and even more severely in 2002, internal turmoil and Israeli military measures in Palestinian Authority areas have resulted in the destruction of much capital plant and administrative structure, widespread business closures, and a sharp drop in GDP. Another major loss has been the decline in earnings of Palestinian workers in Israel.

Western Sahara

Introduction

Background: Morocco virtually annexed the northern two-thirds of Western Sahara (formerly Spanish Sahara) in 1976, and the rest of the territory in 1979, following Mauritania's withdrawal. A guerrilla war with the Polisario Front contesting Rabat's sovereignty ended in a 1991 cease-fire; a referendum on final status has been repeatedly postponed.

Government type: legal status of territory and issue of sovereignty unresolved; territory contested by Morocco and Polisario Front (Popular Front for the Liberation of the Saguia el Hamra and Rio de Oro), which in February 1976 formally proclaimed a government-in-exile of the Sahrawi Arab Democratic Republic (SADR), led by President Mohamed ABDELAZIZ and recognized by 54 nations; territory partitioned between Morocco and Mauritania in April 1976, with Morocco acquiring northern two-thirds; Mauritania, under pressure from Polisario guerrillas, abandoned all claims to its portion in

August 1979; Morocco moved to occupy that sector shortly thereafter and has since asserted administrative control; the Polisario's government-in-exile was seated as an OAU member in 1984; guerrilla activities continued sporadically, until a UN-monitored cease-fire was implemented 6 September 1991

Economy

Economy - overview: Western Sahara depends on pastoral nomadism, fishing, and phosphate mining as the principal sources of income for the population. The territory lacks sufficient rainfall for sustainable agricultural production, and most of the food for the urban population must be imported. All trade and other economic activities are controlled by the Moroccan Government. Moroccan energy interests in 2001 signed contracts to explore for oil off the coast of Western Sahara, which has angered the Polisario. Incomes and standards of living in Western Sahara are substantially below the Moroccan level.

World

Introduction

Background: Globally, the 20th century was marked by: (a) two devastating world wars; (b) the Great Depression of the 1930s; (c) the end of vast colonial empires; (d) rapid advances in science and technology, from the first airplane flight at Kitty Hawk, North Carolina (US) to the landing on the moon; (e) the Cold War between the Western alliance and the Warsaw Pact nations; (f) a sharp rise in living standards in North America, Europe, and Japan; (g) increased concerns about the environment, including loss of forests, shortages of energy and water, the decline in biological diversity, and air pollution; (h) the onset of the AIDS epidemic; and (i) the ultimate emergence of the US as the only world superpower. The planet's population continues to explode: from 1 billion in 1820, to 2 billion in 1930, 3 billion in 1960, 4 billion in 1974, 5 billion in 1988, and 6 billion in 2000. For the 21st century, the continued exponential growth in science and technology raises both hopes (e.g., advances in medicine) and fears (e.g., development of even more lethal weapons of war).

Geography

Area:

total: 510.072 million sq km

land: 148.94 million sq km

water: 361.132 million sq km

note: 70.8% of the world's surface is water, 29.2% is land

Area - comparative: land area about 16 times the size of the US

Land boundaries: the land boundaries in the world total 250,472 km (not counting shared boundaries twice)

Coastline: 356,000 km

Maritime claims: a variety of situations exist, but in general, most countries make the following claims: contiguous zone - 24 NM; continental shelf - 200-m

depth or to the depth of exploitation, or 200 NM or to the edge of the continental margin; exclusive fishing zone - 200 NM; exclusive economic zone - 200 NM; territorial sea - 12 NM; boundary situations with neighboring states prevent many countries from extending their fishing or economic zones to a full 200 NM; 43 nations and other areas that are landlocked include Afghanistan, Andorra, Armenia, Austria, Azerbaijan, Belarus, Bhutan, Bolivia, Botswana, Burkina Faso, Burundi, Central African Republic, Chad, Czech Republic, Ethiopia, Holy See (Vatican City), Hungary, Kazakhstan, Kyrgyzstan, Laos, Lesotho, Liechtenstein, Luxembourg, Malawi, Mali, Moldova, Mongolia, Nepal, Niger, Paraguay, Rwanda, San Marino, Slovakia, Swaziland, Switzerland, Tajikistan, The Former Yugoslav Republic of Macedonia, Turkmenistan, Uganda, Uzbekistan, West Bank, Zambia, Zimbabwe; two of these, Liechtenstein and Uzbekistan, are doubly landlocked

Climate: two large areas of polar climates separated by two rather narrow temperate zones form a wide equatorial band of tropical to subtropical climates

Terrain: the greatest ocean depth is the Mariana Trench at 10,924 m in the Pacific Ocean

Elevation extremes:

lowest point: Bentley Subglacial Trench -2,540 m

note: in the oceanic realm, Challenger Deep in the Mariana Trench is the lowest point, lying -10,924 m below the surface of the Pacific Ocean

highest point: Mount Everest 8,850 m (1999 est.)

Natural resources: the rapid depletion of nonrenewable mineral resources, the depletion of forest areas and wetlands, the extinction of animal and plant species, and the deterioration in air and water quality (especially in Eastern Europe, the former USSR, and China) pose serious long-term problems that governments and peoples are only beginning to address

Environment - current issues: large areas subject to overpopulation, industrial disasters, pollution (air, water, acid rain, toxic substances), loss of vegetation (overgrazing, deforestation, desertification), loss of wildlife, soil degradation, soil depletion, erosion

Geography - note: the world is now thought to be about 4.55 billion years old, just about one-third of the 13-billion-year age estimated for the universe

Economy

Economy - overview: Growth in global output (gross world product, GWP) fell from 4.8% in 2000 to 2.2% in 2001. The causes: slowdowns in the US economy (21% of GWP) and in the 15 EU economies (20% of GWP); continued stagnation in the Japanese economy (7.3% of GWP); and spillover effects in the less developed regions of the world. China, the second largest economy in the world (12% of GWP), proved an exception, continuing its rapid annual growth, officially announced as 7.3% but estimated by many observers as perhaps two percentage points lower. Russia (2.6% of GWP), with 5.2% growth, continued to make uneven progress, its GDP per capita still only one-third that of the leading industrial nations. The other 14 successor nations of the USSR and the other old Warsaw Pact nations again experienced widely divergent growth rates; the three Baltic nations were strong performers, in the 5% range of growth. The developing nations also varied in their growth results, with many countries facing population increases that eat up gains in output. Externally, the nation-state, as a bedrock economic-political institution, is steadily losing control over international flows of people, goods, funds, and technology. Internally, the central government often finds its control over resources slipping as separatist regional movements - typically based on ethnicity - gain momentum, e.g., in many of the successor states of the former Soviet Union, in the former Yugoslavia, in India, in Indonesia, and in Canada. In Western Europe, governments face the difficult political problem of channeling resources away from welfare programs in order to increase investment and strengthen incentives to seek employment. The addition of 80 million people each year to an already overcrowded globe is exacerbating the problems of pollution, desertification, underemployment, epidemics, and famine. Because of their own internal problems and priorities, the industrialized countries devote insufficient resources to deal effectively with the poorer areas of the world, which, at least from the economic point of view, are becoming further marginalized. The introduction of the euro as the common currency of much of Western Europe in January 1999, while paving the way for an integrated economic powerhouse, poses economic risks because of varying levels of income and cultural and political differences among the participating nations. The terrorist attacks on the US on 11 September 2001 accentuate a further growing risk to global prosperity, illustrated, for example, by the reallocation of

resources away from investment to anti-terrorist programs. (For specific economic developments in each country of the world in 2001, see the individual country entries.)

Yemen

Introduction

Background: North Yemen became independent of the Ottoman Empire in 1918. The British, who had set up a protectorate area around the southern port of Aden in the 19th century, withdrew in 1967 from what became South Yemen. Three years later, the southern government adopted a Marxist orientation. The massive exodus of hundreds of thousands of Yemenis from the south to the north contributed to two decades of hostility between the states. The two countries were formally unified as the Republic of Yemen in 1990. A southern secessionist movement in 1994 was quickly subdued. In 2000, Saudi Arabia and Yemen agreed to a delimitation of their border.

Economy

Economy - overview: Yemen, one of the poorest countries in the Arab world, reported strong growth in the mid-1990s with the onset of oil production, but has been harmed by periodic declines in oil prices. Yemen has embarked on an IMF-supported structural adjustment program designed to modernize and streamline the economy, which has led to substantial foreign debt relief and restructuring. Aided by higher oil prices in 1999-2000, Yemen worked to maintain tight control over spending and implement additional components of the IMF program. A high population growth rate and internal political dissension complicate the government's task.

Yugoslavia

Introduction

Background: The Kingdom of Serbs, Croats, and Slovenes was formed in 1918; its name was changed to Yugoslavia in 1929. Occupation by Nazi Germany in 1941 was resisted by various paramilitary bands that fought themselves as well as the invaders. The group headed by Marshal TITO took full control upon German expulsion in 1945. Although Communist, his new government successfully steered its own path between the Warsaw Pact nations and the West for the next four and a half decades. In the early 1990s, post-TITO Yugoslavia began to unravel along ethnic lines: Slovenia, Croatia, and The Former Yugoslav Republic of Macedonia all declared their independence in 1991; Bosnia and Herzegovina in 1992. The remaining republics of Serbia and Montenegro declared a new "Federal Republic of Yugoslavia" (FRY) in 1992 and, under President Slobodan MILOSEVIC, Serbia led various military intervention efforts to unite Serbs in neighboring republics into a "Greater Serbia." All of these efforts were ultimately unsuccessful. In 1999, massive expulsions by FRY forces and Serb paramilitaries of ethnic Albanians living in Kosovo provoked an international response, including the NATO bombing of Serbia and the stationing of NATO and Russian peacekeepers in Kosovo. There are Democratic Opposition of Serbia (DOS)-led coalitions governing at the federal and Serbian Republic levels, implementing a wide-ranging political and economic reform program. The governing coalition in Montenegro is seeking independence from the Federation. Kosovo has been governed by the UN Interim Administration Mission in Kosovo (UNMIK) since June 1999, under the authority of UN Security Council Resolution 1244.

Economy

Economy - overview: MILOSEVIC-era mismanagement of the economy, an extended period of economic sanctions, and the damage to Yugoslavia's infrastructure and industry during the war in Kosovo have left the economy only half the size it was in 1990. Since the ousting of former Federal Yugoslav President MILOSEVIC in October 2000, the Democratic Opposition of Serbia (DOS) coalition government has implemented stabilization measures and embarked on an aggressive market reform program. After renewing its membership in the IMF in December 2000, Yugoslavia continued to reintegrate

Yugoslavia (continued)

into the international community by rejoining the World Bank (IBRD) and the European Bank for Reconstruction and Development (EBRD). A World Bank-European Commission sponsored Donors' Conference held in June 2001 raised \$1.3 billion for economic restructuring. An agreement rescheduling the country's \$4.5 billion Paris Club government debts was concluded in November 2001; it will write off 66% of the debt and provide a basis for Belgrade to seek similar debt relief on its \$2.8 billion London Club commercial debt. The smaller republic of Montenegro severed its economy from federal control and from Serbia during the MILOSEVIC era and continues to maintain its own central bank, uses the euro instead of the Yugoslav dinar as official currency, collects customs tariffs, and manages its own budget. Kosovo, while technically still part of the Federal Republic of Yugoslavia according to United Nations Security Council Resolution 1244, is moving toward local autonomy under United Nations Interim Administration Mission in Kosovo (UNMIK) and is dependent on the international community for financial and technical assistance. The euro and the Yugoslav dinar are official currencies, and UNMIK collects taxes and manages the budget.

Railways:

total: 4,059 km

standard gauge: 4,059 km 1.435-m gauge (1,377 km electrified)

note: during the 1999 Kosovo conflict, the Serbian rail system suffered significant damage due to bridge destruction; many rail bridges have been rebuilt; Montenegrin rail lines remain intact (2001)

Highways:

total: 48,603 km

paved: 28,822 km (including 560 km of expressways)

unpaved: 19,781 km

note: because of the 1999 Kosovo conflict, many road bridges were destroyed; since the end of the conflict in June 1999, there has been an intensive program to either rebuild bridges or build by-pass routes (1999)

Waterways: 587 km

note: the Danube River, central Europe's connection with the Black Sea, runs through Serbia; since early 2000, a pontoon bridge, replacing a destroyed conventional bridge, has obstructed river traffic at Novi Sad; the obstruction is bypassed by a canal system, the inadequate lock size of which limits the size of vessels which may pass; the pontoon bridge can be opened for large ships but has slowed river traffic (2001)

Transnational Issues

Disputes - international: Yugoslavia and Bosnia and Herzegovina have delimited about half of their boundary, but several segments, particularly along the meandering Drina River, remain in dispute; FYROM-Yugoslavia signed and ratified a boundary agreement, which adjusts the former republic boundaries, with demarcation to commence in 2002; ethnic Albanians in Kosovo dispute authority of agreement which cedes small tracts of Kosovo to FYROM; Croatia and Yugoslavia continue to discuss disputed Prevlaka Peninsula and control over the Gulf of Kotor despite imminent UN intention to withdraw observer mission (UNMOP)

Illicit drugs: transshipment point for Southwest Asian heroin moving to Western Europe on the Balkan route

Zambia

Introduction

Background: The territory of Northern Rhodesia was administered by the South Africa Company from 1891 until it was taken over by the UK in 1923. During the 1920s and 1930s, advances in mining spurred development and immigration. The name was changed to Zambia upon independence in 1964. In the 1980s and 1990s, declining copper prices and a prolonged drought hurt the economy. Elections in 1991 brought an end to one-party rule, but the subsequent vote in 1996 saw blatant harassment of opposition parties. The election in 2001 was marked by administrative problems with at least two parties filing legal petitions challenging the results. Opposition parties currently hold a majority of seats in the National Assembly.

Economy

Economy - overview: Despite progress in privatization and budgetary reform, Zambia's economy has a long way to go. Privatization of government-owned copper mines relieved the government from covering mammoth losses generated by the industry and greatly improved the chances for copper mining to return to profitability and spur economic growth. However, low mineral prices have slowed the benefits from privatizing the mines and reduced incentives for further private investment in the sector. In late 2000, Zambia was determined to be eligible for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative, but Zambia has not yet finalized its Poverty Reduction Strategy paper. Unemployment rates remain high, but GDP growth should continue at about 4%. Inflation should remain close to 20%.

Zimbabwe

Introduction

Background: The UK annexed Southern Rhodesia from the South Africa Company in 1923. A 1961 constitution was formulated that favored whites in power. In 1965 the government unilaterally declared its independence, but the UK did not recognize the act and demanded more complete voting rights for the black African majority in the country (then called Rhodesia). UN sanctions and a guerrilla uprising finally led to free elections in 1979 and independence (as Zimbabwe) in 1980. Robert MUGABE, the nation's first prime minister, has been the country's only ruler (as president since 1987) and has dominated the country's political system since independence.

Economy

Economy - overview: The government of Zimbabwe faces a wide variety of difficult economic problems as it struggles to consolidate earlier moves to develop a market-oriented economy. Its involvement in the war in the Democratic Republic of the Congo, for example, has already drained hundreds of millions of dollars from the economy. Badly needed support from the IMF has been suspended because of the country's failure to meet budgetary goals. Inflation rose from an annual rate of 32% in 1998 to 59% in 1999, to 60% in 2000, and to 100% by yearend 2001. The economy is being steadily weakened by excessive government deficits, AIDS, and rampant inflation. The government's land reform program, characterized by chaos and violence, has derailed the commercial sector, the traditional source of exports and foreign exchange and the provider of 400,000 jobs. Distribution of income is extremely unequal.

Taiwan

Introduction

Background: In 1895, military defeat forced China to cede Taiwan to Japan, however it reverted to Chinese control after World War II. Following the Communist victory on the mainland in 1949, 2 million Nationalists fled to Taiwan and established a government using the 1947 constitution drawn up for all of China. Over the next five decades, the ruling authorities gradually democratized and incorporated the native population within its governing structure. This culminated in 2000, when Taiwan underwent its first peaceful transfer of power from the Nationalist to the Democratic Progressive Party. Throughout this period, the island has prospered to become one of East Asia's economic "Tigers." The dominant political issues continue to be the relationship between Taiwan and China - specifically the question of eventual unification - as well as domestic political and economic reform.

Economy

Economy - overview: Taiwan has a dynamic capitalist economy with gradually decreasing guidance of investment and foreign trade by government authorities. In keeping with this trend, some large government-owned banks and industrial firms are being privatized. Real growth in GDP has averaged about 8% during the past three decades. Exports have provided the primary impetus for industrialization. The trade surplus is substantial, and foreign reserves are the world's third largest. Agriculture contributes 2% to GDP, down from 35% in 1952. Traditional labor-intensive industries are steadily being moved offshore and replaced with more capital- and technology-intensive industries. Taiwan has become a major investor in China, Thailand, Indonesia, the Philippines, Malaysia, and Vietnam; 50,000 Taiwanese businesses are established in China. Because of its conservative financial approach and its entrepreneurial strengths, Taiwan suffered little compared with many of its neighbors from the Asian financial crisis in 1998-99. The global economic downturn, however, combined with poor policy coordination by the new administration and increasing bad debts in the banking system, pushed Taiwan into recession in 2001, the first whole year of negative growth since 1947. Unemployment also reached a level not seen since the 1970s oil crisis.

Convention on the Conservation of Antarctic Marine Living Resources

note—abbreviated as Antarctic-Marine Living Resources

opened for signature—5 May 1980

entered into force—7 April 1982

objective—to safeguard the environment and protect the integrity of the ecosystem of the seas surrounding Antarctica, and to conserve Antarctic marine living resources

parties—(31) Argentina, Australia, Belgium, Brazil, Bulgaria, Canada, Chile, EU, Finland, France, Germany, Greece, India, Italy, Japan, South Korea, Namibia, Netherlands, NZ, Norway, Peru, Poland, Russia, South Africa, Spain, Sweden, Ukraine, UK, US, Uruguay, Vanuatu

Convention on the International Trade in Endangered Species of Wild Flora and Fauna (CITES)

note—abbreviated as Endangered Species

opened for signature—3 March 1973

entered into force—1 July 1975

objective—to protect certain endangered species from overexploitation by means of a system of import/export permits

parties—(156) Afghanistan, Algeria, Antigua and Barbuda, Argentina, Australia, Austria, Azerbaijan, The Bahamas, Bangladesh, Barbados, Belarus, Belgium, Belize, Benin, Bolivia, Botswana, Brazil, Brunei, Bulgaria, Burkina Faso, Burma, Burundi, Cambodia, Cameroon, Canada, Central African Republic, Chad, Chile, China, Colombia, Comoros, Democratic Republic of the Congo, Republic of the Congo, Costa Rica, Cote d'Ivoire, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Djibouti, Dominica, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Eritrea, Estonia, Ethiopia, Fiji, Finland, France, Gabon, The Gambia, Georgia, Germany, Ghana, Greece, Grenada, Guatemala, Guinea, Guinea-Bissau, Guyana, Honduras, Hungary, Iceland, India, Indonesia, Iran, Israel, Italy, Jamaica, Japan, Jordan, Kazakhstan, Kenya, South Korea, Latvia, Liberia, Liechtenstein, Lithuania, Luxembourg, The Former Yugoslav Republic of Macedonia, Madagascar, Malawi, Malaysia, Mali, Malta, Mauritania, Mauritius, Mexico, Moldova, Monaco, Mongolia, Morocco, Mozambique, Namibia, Nepal, Netherlands, NZ, Nicaragua, Niger, Nigeria, Norway, Pakistan, Panama, Papua New Guinea, Paraguay, Peru, Philippines, Poland, Portugal, Qatar, Romania, Russia, Rwanda, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Sao Tome and Principe, Saudi Arabia, Senegal, Seychelles, Sierra Leone, Singapore, Slovakia, Slovenia, Somalia, South Africa, Spain, Sri Lanka, Sudan, Suriname, Swaziland, Sweden, Switzerland, Tanzania, Thailand, Togo, Trinidad and Tobago, Tunisia, Turkey, Uganda, Ukraine, UAE, UK, US, Uruguay, Uzbekistan, Vanuatu, Venezuela, Vietnam, Yemen, Zambia, Zimbabwe

countries that have signed, but not yet ratified—(3) Ireland, Kuwait, Lesotho

Convention on the Prevention of Marine Pollution by Dumping Wastes and Other Matter (London Convention)

note—abbreviated as Marine Dumping

opened for signature—29 December 1972

entered into force—30 August 1975

objective—to control pollution of the sea by dumping and to encourage regional agreements supplementary to the Convention

parties—(78) Afghanistan, Antigua and Barbuda, Argentina, Australia, Azerbaijan, Barbados, Belarus, Belgium, Brazil, Canada, Cape Verde, Chile, China, Democratic Republic of the Congo, Costa Rica, Cote d'Ivoire, Croatia, Cuba, Cyprus, Denmark, Dominican Republic, Egypt, Finland, France, Gabon, Germany, Greece, Guatemala, Haiti, Honduras, Hong Kong (associate member), Hungary, Iceland, Iran, Ireland, Italy, Jamaica, Japan, Jordan, Kenya, Kiribati, South Korea, Libya, Luxembourg, Malta, Mexico, Monaco, Morocco, Nauru, Netherlands, NZ, Nigeria, Norway, Oman, Pakistan, Panama, Papua New Guinea, Philippines, Poland, Portugal, Russia, Saint Lucia, Seychelles, Slovenia, Solomon Islands, South Africa, Spain, Suriname, Sweden, Switzerland, Tonga, Tunisia, Ukraine, UAE, UK, US, Vanuatu, Yugoslavia

Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques

note—abbreviated as Environmental Modification

opened for signature—10 December 1976

entered into force—5 October 1978

objective—to prohibit the military or other hostile use of environmental modification techniques in order to further world peace and trust among nations

parties—(66) Afghanistan, Algeria, Antigua and Barbuda, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, Cape Verde, Chile, Costa Rica, Cuba, Cyprus, Czech Republic, Denmark, Dominica, Egypt, Finland, Germany, Ghana, Greece, Guatemala, Hungary, India, Ireland, Italy, Japan, North Korea, South Korea, Kuwait, Laos, Malawi, Mauritius, Mongolia, Netherlands, NZ, Niger, Norway, Pakistan, Papua New Guinea, Poland, Romania, Russia, Saint Lucia, Saint Vincent and the Grenadines, Sao Tome and Principe, Slovakia, Solomon Islands, Spain, Sri Lanka, Sweden, Switzerland, Tajikistan, Tunisia, Ukraine, UK, US, Uruguay, Uzbekistan, Vietnam, Yemen

countries that have signed, but not yet ratified—(17) Bolivia, Democratic Republic of the Congo, Ethiopia, Holy See, Iceland, Iran, Iraq, Lebanon, Liberia, Luxembourg, Morocco, Nicaragua, Portugal, Sierra Leone, Syria, Turkey, Uganda

Appendix C: Selected International Environmental Agreements *(continued)*

Protocol on Environmental Protection to the Antarctic Treaty

note—abbreviated as Antarctic-Environmental Protocol

opened for signature—4 October 1991

entered into force—14 January 1998

objective—to provide for comprehensive protection of the Antarctic environment and dependent and associated ecosystems; applies to the area covered by the Antarctic Treaty

consultative parties—(27) Argentina, Australia, Belgium, Brazil, Bulgaria, Chile, China, Ecuador, Finland, France, Germany, India, Italy, Japan, South Korea, Netherlands, NZ, Norway, Peru, Poland, Russia, South Africa, Spain, Sweden, UK, US, Uruguay

non consultative parties—(16) Austria, Canada, Colombia, Cuba, Czech Republic, Denmark, Greece, Guatemala, Hungary, North Korea, Papua New Guinea, Romania, Slovakia, Switzerland, Turkey, Ukraine

Protocol to the 1979 Convention on Long-Range Transboundary Air Pollution Concerning the Control of Emissions of Nitrogen Oxides or Their Transboundary Fluxes

note—abbreviated as Air Pollution-Nitrogen Oxides

opened for signature—31 October 1988

entered into force—14 February 1991

objective—to provide for the control or reduction of nitrogen oxides and their transboundary fluxes

parties—(28) Austria, Belarus, Belgium, Bulgaria, Canada, Czech Republic, Denmark, Estonia, EU, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Liechtenstein, Luxembourg, Netherlands, Norway, Russia, Slovakia, Spain, Sweden, Switzerland, Ukraine, UK, US

countries that have signed, but not yet ratified—(1) Poland

Protocol to the 1979 Convention on Long-Range Transboundary Air Pollution Concerning the Control of Emissions of Volatile Organic Compounds or Their Transboundary Fluxes

note—abbreviated as Air Pollution-Volatile Organic Compounds

opened for signature—18 November 1991

entered into force—29 September 1997

objective—to provide for the control and reduction of emissions of volatile organic compounds in order to reduce their transboundary fluxes so as to protect human health and the environment from adverse effects

parties—(21) Austria, Belgium, Bulgaria, Czech Republic, Denmark, Estonia, Finland, France, Germany, Hungary, Italy, Liechtenstein, Luxembourg, Monaco, Netherlands, Norway, Slovakia, Spain, Sweden, Switzerland, UK

countries that have signed, but not yet ratified—(6) Canada, EU, Greece, Portugal, Ukraine, US

Protocol to the 1979 Convention on Long-Range Transboundary Air Pollution on Further Reduction of Sulphur Emissions

note—abbreviated as Air Pollution-Sulphur 94

opened for signature—14 June 1994

entered into force—5 August 1998

objective—to provide for a further reduction in sulfur emissions or transboundary fluxes

parties—(23) Austria, Belgium, Canada, Croatia, Czech Republic, Denmark, EU, Finland, France, Germany, Greece, Ireland, Italy, Liechtenstein, Luxembourg, Netherlands, Norway, Slovakia, Slovenia, Spain, Sweden, Switzerland, UK

countries that have signed, but not yet ratified—(5) Bulgaria, Hungary, Poland, Russia, Ukraine

Cross-Reference List of Country Data Codes

FIPS 10-4: Countries, Dependencies, Areas of Special Sovereignty, and Their Principal Administrative Divisions (FIPS PUB 10-4) is maintained by the Office of the Geographer and Global Issues (Department of State) and published by the National Institute of Standards and Technology (Department of Commerce). FIPS 10-4 codes are intended for general use throughout the US Government, especially in activities associated with the mission of the Department of State and national defense programs.

ISO 3166: Codes for the Representation of Names of Countries (ISO 3166) is prepared by the International Organization for Standardization. ISO 3166 includes two- and three-character alphabetic codes and three-digit numeric codes that may be needed for activities involving exchange of data with international organizations that have adopted that standard. Except for the numeric codes, ISO 3166 codes have been adopted in the US as FIPS 104-1: American National Standard Codes for the Representation of Names of Countries, Dependencies, and Areas of Special Sovereignty for Information Interchange.

Internet: The Internet country code is the two-letter digraph maintained by the International Organization for Standardization (ISO) in the ISO 3166 Alpha-2 list and used by the Internet Assigned Numbers Authority (IANA) to establish country-coded top-level domains (ccTLDs).

DIAM 65-18:	<i>Geopolitical Data Elements and Related Features</i> , Data Standard No. 4, Defense Intelligence Agency Manual 65-18, December 1994, published by the Defense Intelligence Agency

The US Government has not yet adopted a standard for hydrographic codes similar to the Federal Information Processing Standards (FIPS) 10-4 country codes. The names and limits of the following oceans and seas are not always directly comparable because of differences in the customers, needs, and requirements of the individual organizations. Even the number of principal water bodies varies from organization to organization. *Factbook* users, for example, find the Atlantic Ocean and Pacific Ocean entries useful, but none of the following standards include those oceans in their entirety. Nor is there any provision for combining codes or overcodes to aggregate water bodies. The recently delimited Southern Ocean is not included.
